- ▶ Cole et al. JDS 2009
- ▶ fertility traits
- ▶ new missense mutation detected

Objectives

Testing influence of SIGLEC5 gene on 29 traits (type, production, fertility and somatic cell) in dairy cattle using three mixed models. Searching possible SNPs in high linkage disequilibrium with this gene, which affects the traits.

- ▶ 400 HF bulls

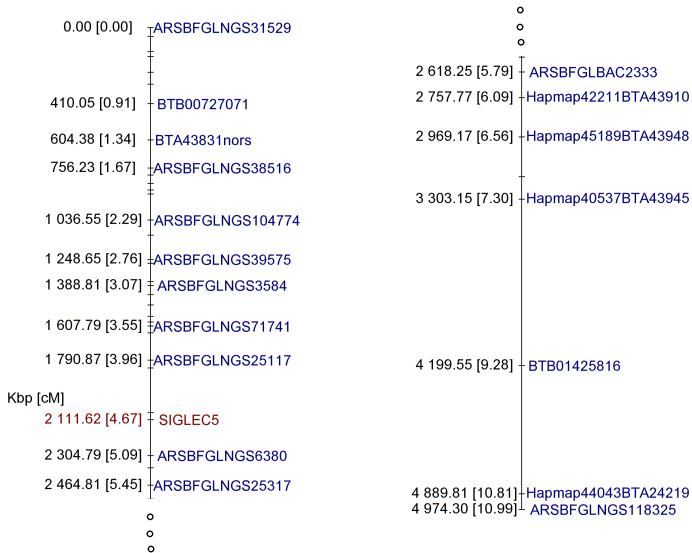

- ▶ EBV

- ▶ Traits:
 - ▶ 3 production traits
 - ▶ 21 type traits
 - ▶ 4 fertility traits
 - ▶ somatic cell score

- ▶ 41 SNP markers on BTA18
 - ▶ SIGLEC5 gene
 - ▶ 28 SNPs from the left side of SIGLEC5 gene
 - ▶ 12 SNPs from the right side of SIGLEC5 gene

- ▶ \mathbf{y} – EBV
- ▶ $\boldsymbol{\alpha}$ – random animal polygenic effect, $\boldsymbol{\alpha} \sim \mathcal{N}(\mathbf{0}, \mathbf{A}\sigma_\alpha^2)$

EM algorithm:

$$\blacktriangleright \sigma_{\alpha}^{2[t+1]} = \frac{\hat{\alpha}'^{[t]} \mathbf{A}^{-1} \hat{\alpha}^{[t]} + \text{tr}(\mathbf{A}^{-1} \mathbf{C}^{\alpha[t]}) \sigma_{\epsilon}^{2[t]}}{N}$$

$$\blacktriangleright \sigma_q^{2[t+1]} = \frac{\hat{\mathbf{q}}'^{[t]} \hat{\mathbf{q}}^{[t]} + \text{tr}(\mathbf{C}^q[t]) \sigma_{\epsilon}^{2[t]}}{K}$$
