

Consequences of different national ZP equations in EU to estimate lean meat content in pig carcasses

Abstract no.: 16930

Session: 02: Carcass and meat quality: from measurement to payment

COST Action FAIM is acknowledged for their financial support.

Font-i-Furnols, M., Daumas, G., Judas, M., Seynaeve, M., **Gispert, M.**, Candek-Potokar, M.

BASIS OF PIG CARCASS GRADING

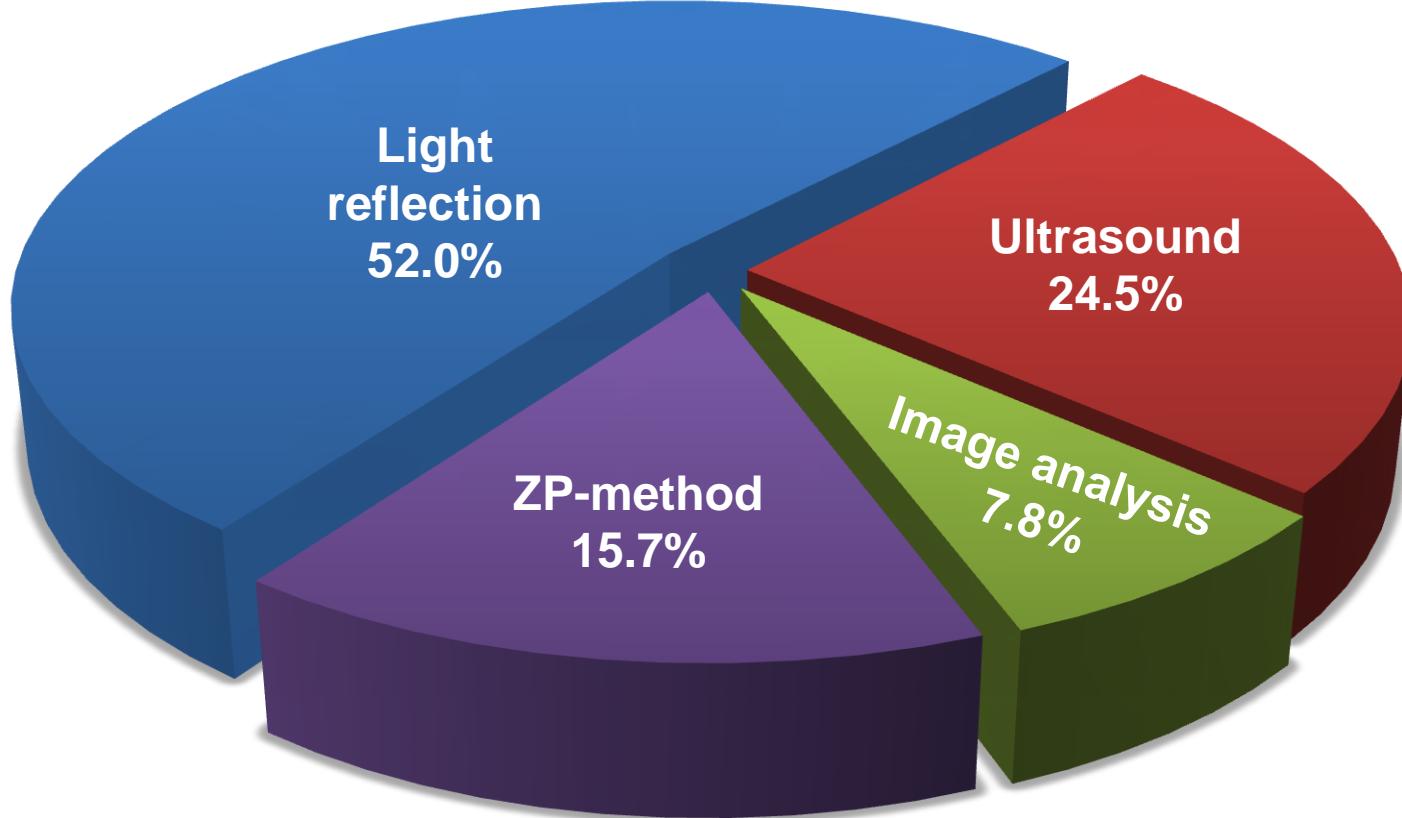

UE REG. 1234/2007

UE REG. 1249/2009 (rules of implementation...)

MAIN PRINCIPLES

- Criteria: evaluation of lean meat content in the carcass
- Based objective measurements
- Representative sample of the population
- Required constraints of error
-

TECHNOLOGIES APPROVED FOR PIG CARCASS GRADING USED IN EU (2013)

Number of countries with approved ZP method

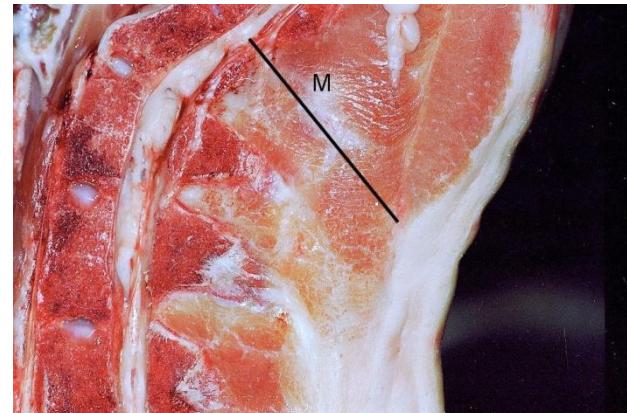

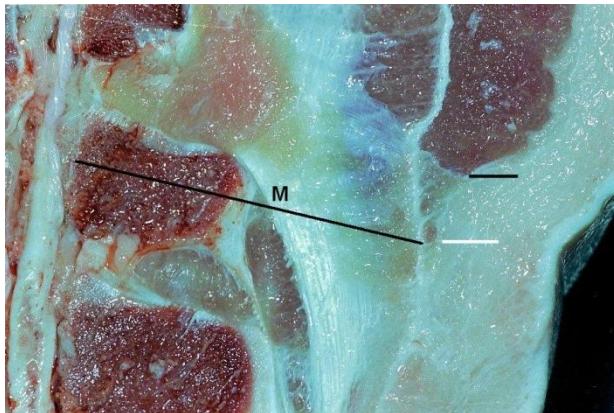

Ruler	11
Optiscan-TP	4
MD02	1

METHOD ZP (small abattoirs)

F-ZP: Shortest measurement of fat+skin thicknesses over *gluteus medius* m.

M-ZP: Minimum distance from vertebral channel to the cranial end of the *gluteus medius*

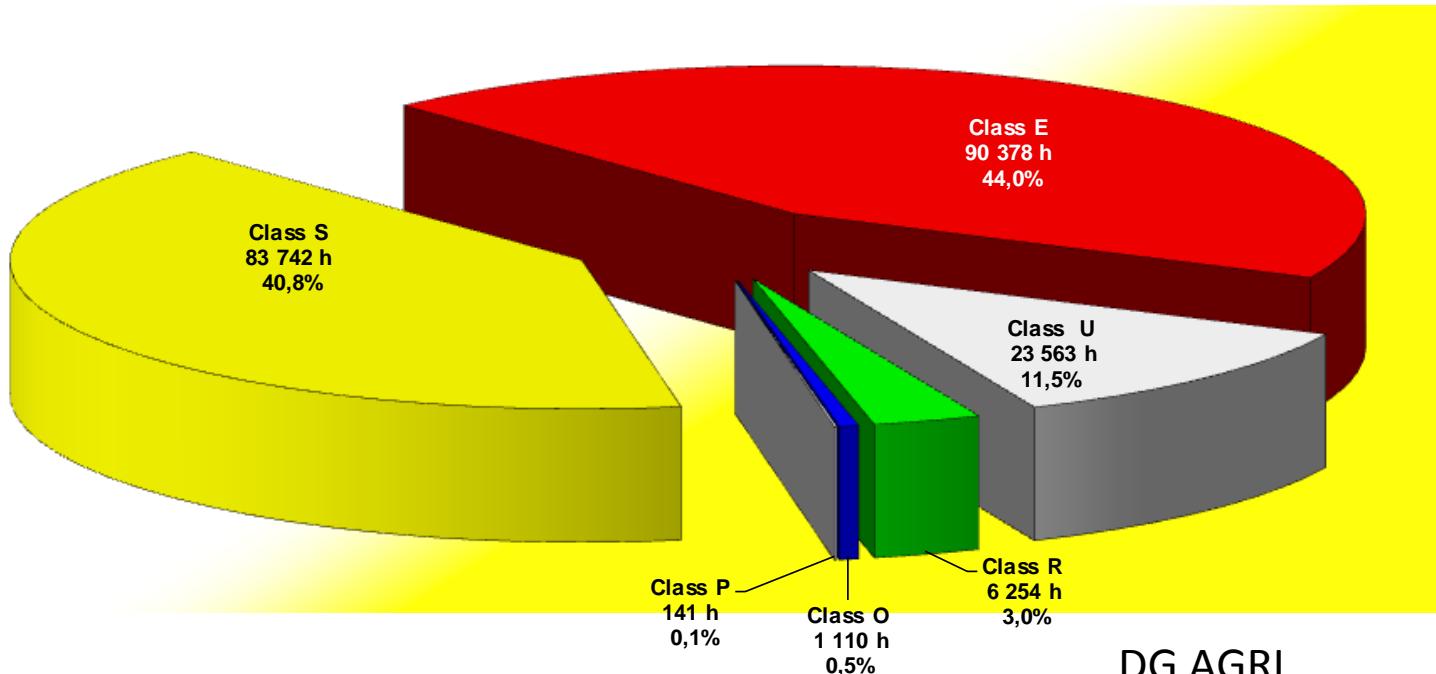

CLASSES UE Carcass LMP

S	$\geq 60\%$ (opt)
E	60% - 55%
U	55% - 50%
R	50% - 45%
O	45% - 40%
P	< 40%

**Dispersion of Pig Carcasses on grades
EU 27 in 2011 (in 1000 heads)**

OFFICIAL FORMULAS TO ESTIMATE %LEAN MEAT WITH ZP METHOD BY COUNTRY

Country	EU Decision	Intercept	Equation Coefficients			
			F-ZP	M-ZP	Hot CW	CW (kg)
BE	2012/146/UE	58.81491	-0.6415	0.16873	-	60-130
CZ	2013/187/UE	59.08991	-0.43868	0.09792	-	60-120
DE	2011/258/EU	58.101220	-0.56495	0.13199	-	50-120
SK	2009/622/EC	59.79	-0.581	0.107	-	60-120
ES	2012/384/EU	59.89	-0.821	0.157	-	60-120
FR	2006/784/EC	55.99	-0.514	0.157	-	45-125
LV	2007/571/EC	61.689	-0.658	0.109	-	50-100
LT	2008/364/CE	54.578	-0.47534	0.27035	-0.09201	50-110

NATIONAL SAMPLES USED FROM NATIONAL TRIALS AND MEASUREMENT TOOL

Spain (n=132)	Ruler
Slovenia (n=121)	DM02
France (n=250)	Calliper
Germany (n=308)	Ruler
Belgium (n=140)	Optiscan-TP

Pooled (n=951)

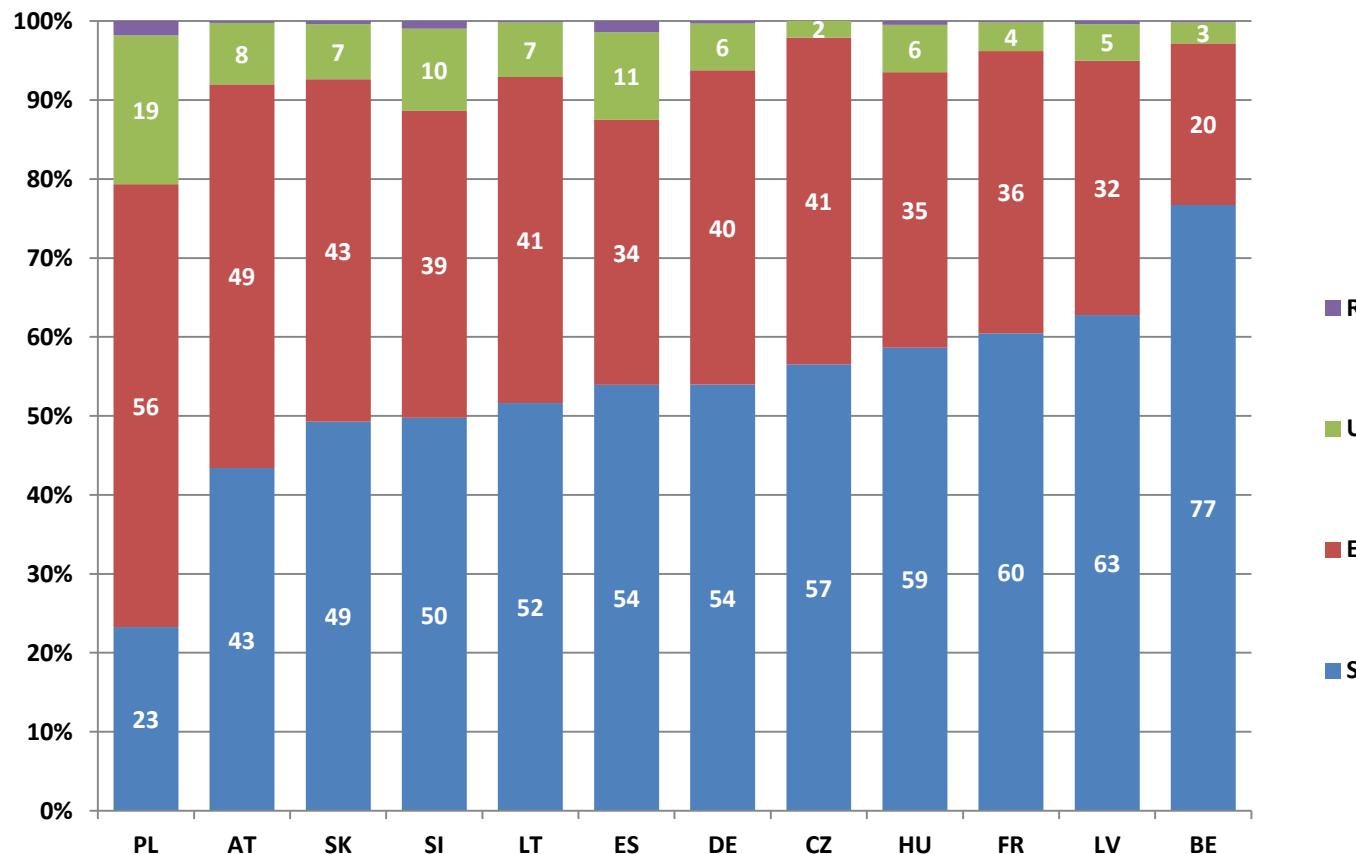

MD02

Optiscan-TP

% OF CARCASSES FROM THE DATA SET WITHIN EACH SEUROP CLASSES AFTER APPLYING THE OFFICIAL ZP FORMULA IN EACH COUNTRY

CONCLUSIONS

Differences in the results can be ascribed to:

- The diversity of pig national populations across countries (sexes and genotypes)
- Methodological differences (different tools used to measure ZP, differences in the measurements due to the operator)
- Observed differences between approved ZP equations can be considered too high to be acceptable in view of EU harmonization.
