# Objective

Investigate how the presence of a dual dairy supply chain, which operates within the same region through formal and informal markets, impacts on the interaction between smallholder farmers and processors at organizational level.

# Research contribution

The present research is of interest because:

- Helps to better understand how dairy supply chains are structured in rural areas of tropical countries.
- Gives sufficient knowledge for designing accurate sustainable public policies, which regulate correctly the simultaneous presence of formal and informal markets, but without strangling small scale farmers.
