

# Productivity, efficiency and environmental load from cattle production since 1920 – in Denmark

Troels Kristensen<sup>1</sup>, Ole Aaes<sup>2</sup> & Martin Riis Weisbjerg<sup>1</sup>

1) Aarhus University, Foulum, DK-8830 Tjele, Denmark

2) Knowledge Centre Agriculture, Cattle, Agro Food Park 15, DK-8200 Aarhus N, Denmark

## Agenda

### Background data and information

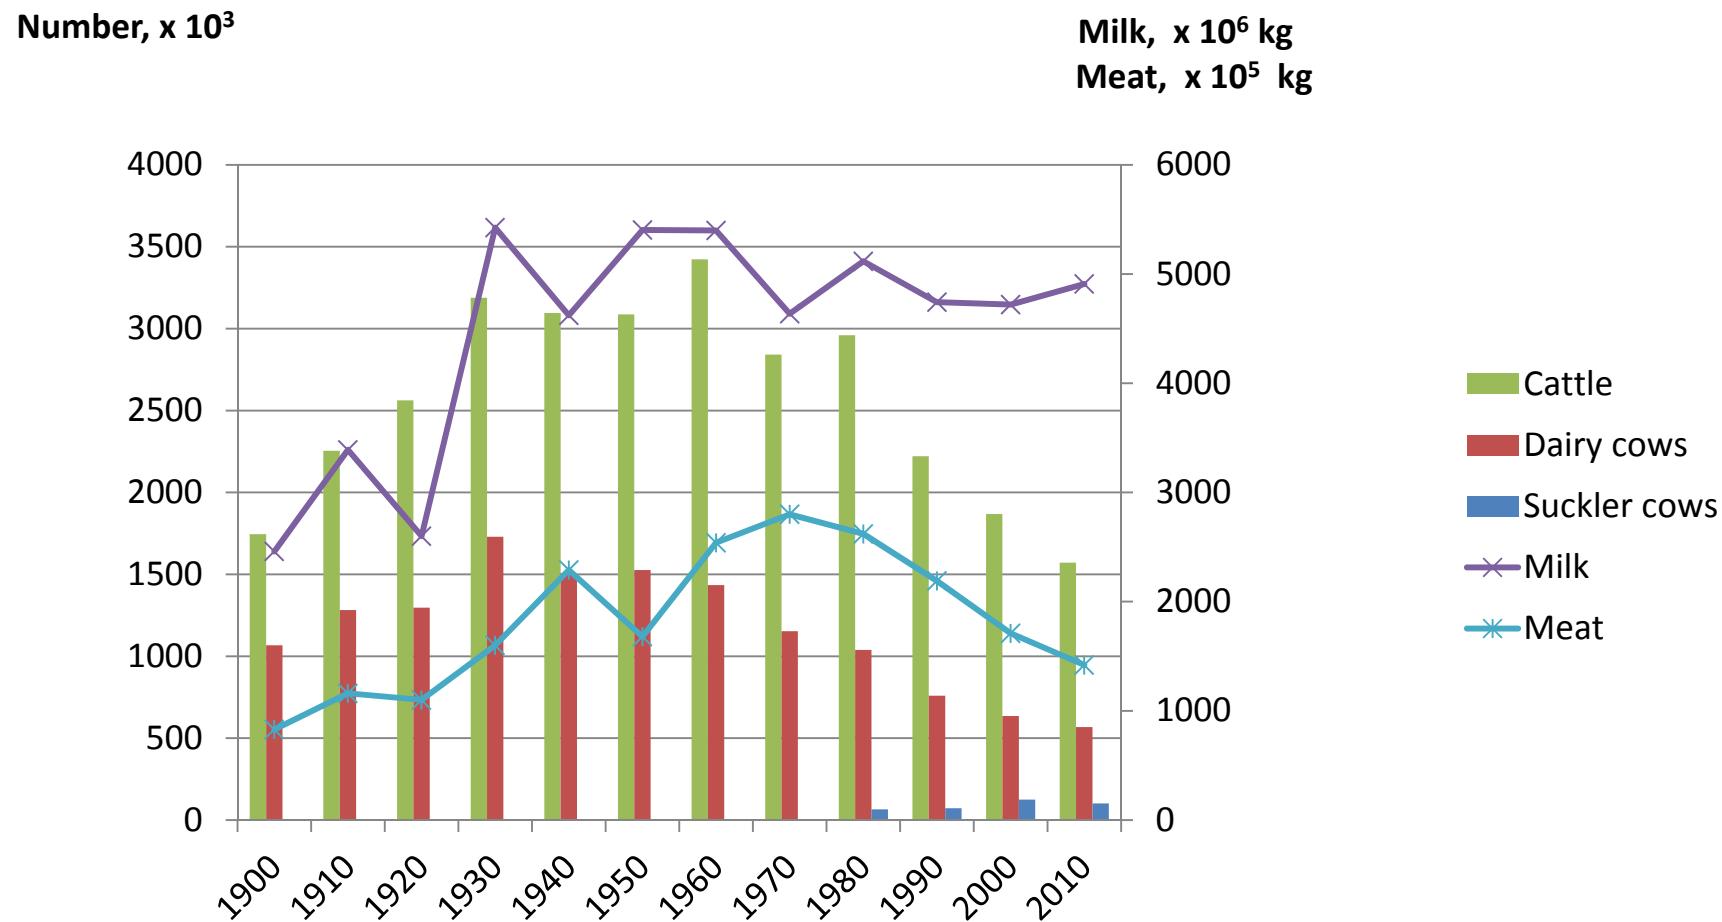

### Typical farm (1920, 1950, 1980 and 2010)

- Production
- Efficiency
- N load
- GHG emission

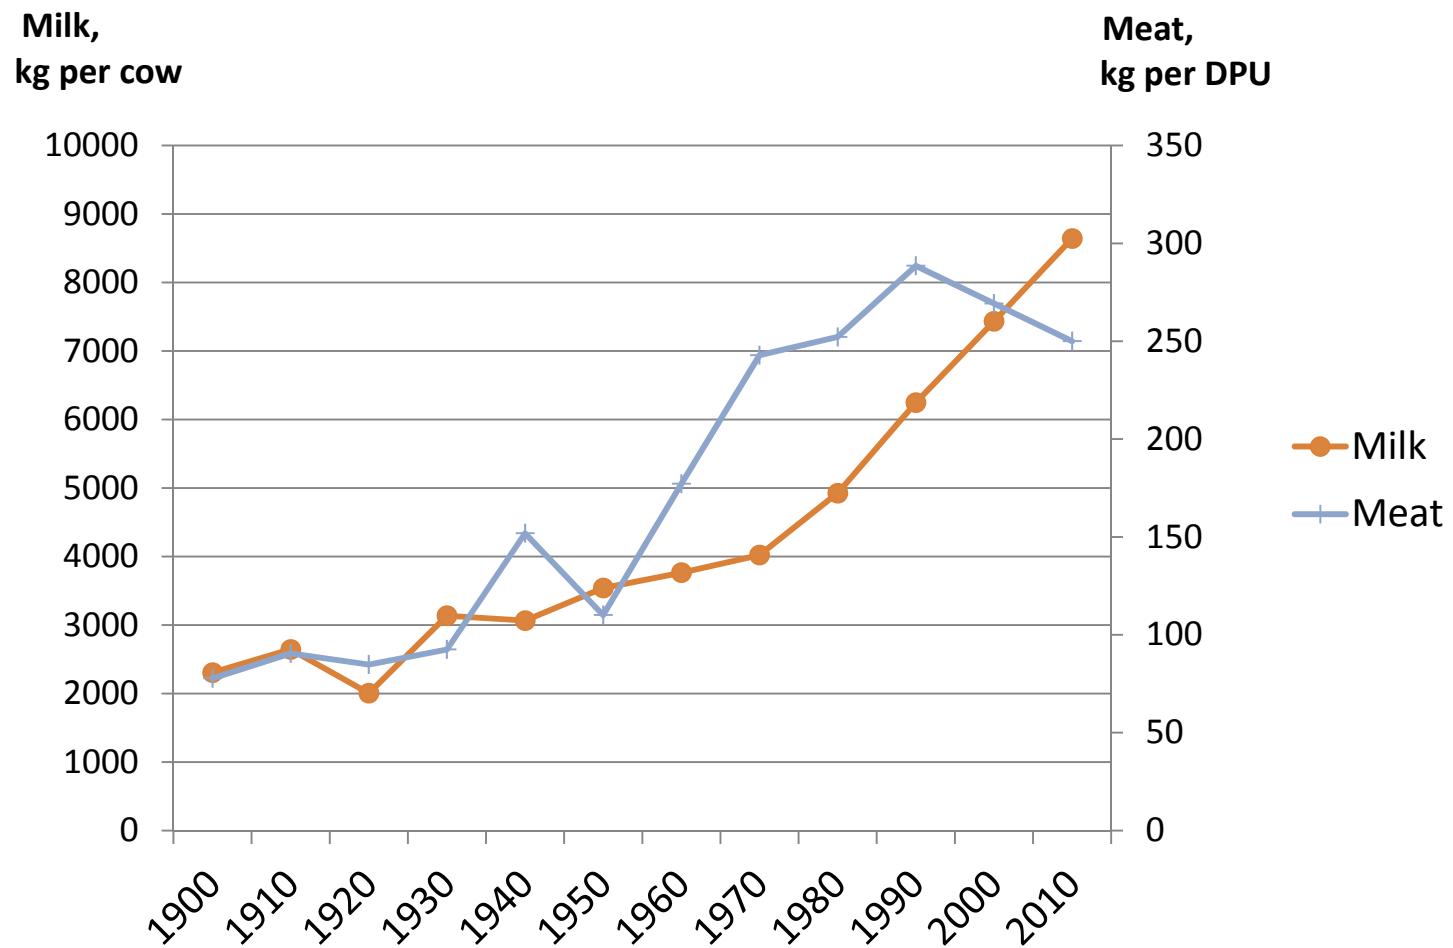

### Future trends

## Number of cattle and annual production of milk and meat – Denmark 1900 to 2010

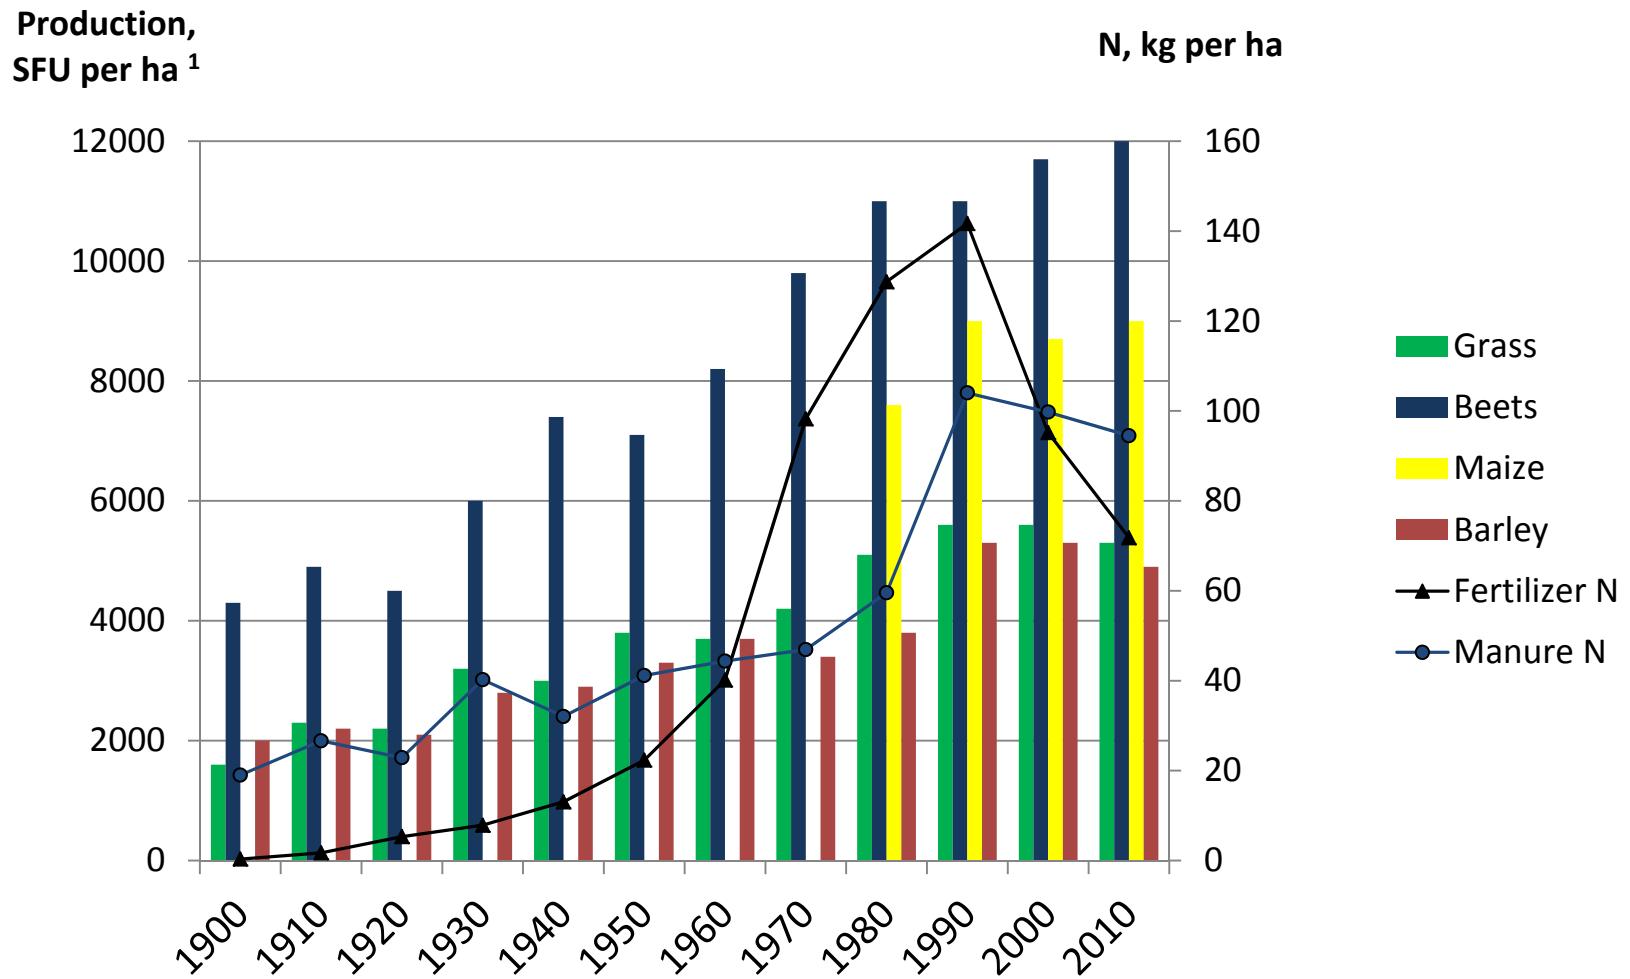

## Production of milk and meat, kg annually per dairy cow – Denmark 1990 to 2010

1: DPU: dairy production unit – one dairy cow including young stock

## Production of main crops and use of nitrogen in average per ha of arable land - Denmark

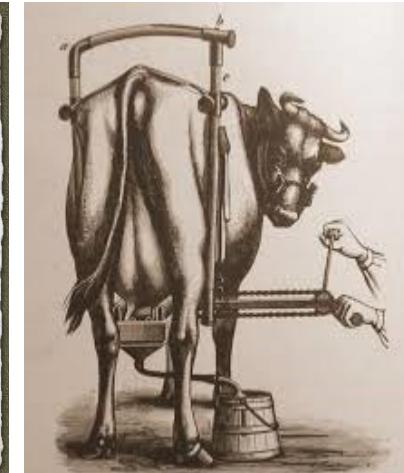

1: One SFU = 7,8 MJ Net Energy

## Development in technology 1920 - 2010

### From hand milking to robot milking (AMS)

1920: First milking machines

1950 : 45% of cows milked by machines

1960: First pipeline milking system

1970: First milking parlors

1980: Automatic teat cup removers

1990: First AMS

2010: 25% of cows milking in AMS

## Typical farms

1920 – representing local production and marketing

1950 – representing the period with emerging mechanization and introduction of new technologies and a more global market

1980 – representing a period with heavy use of external resources like fertilizer and protein

2010 – today with focus on balancing production and risk of environmental damage.

Key figures typical **dairy farms** 1920 – 2010 in Denmark, farm and herd level

| Year                                     | 1920 | 1950 | 1980 | 2010  |
|--|------|------|------|-------|
| Dairy cows                               | 7    | 8    | 20   | 134   |
| Heifers                                  | 5    | 6    | 22   | 126   |
| Bulls                                    | 2    | 2    | 12   | 55    |
| Yield <sup>1</sup> , kg ECM / cow / year | 1804 | 3435 | 5058 | 8994  |
| Meat, kg / DPU / year                    | 76   | 100  | 229  | 211   |
| Farm land, ha                            | 8,8  | 8,0  | 19,4 | 162,1 |
| Forage, SFU / ha                         | 2118 | 3841 | 5176 | 5551  |
| Energy content, SFU / kg DM              | 0,74 | 0,81 | 0,89 | 0,93  |
| Protein, g crude protein / kg DM         | 142  | 137  | 180  | 157   |
| Feed efficiency <sup>2</sup> , %         | 39   | 49   | 57   | 64    |
| Protein efficiency <sup>3</sup> , %      | 12   | 19   | 16   | 23    |

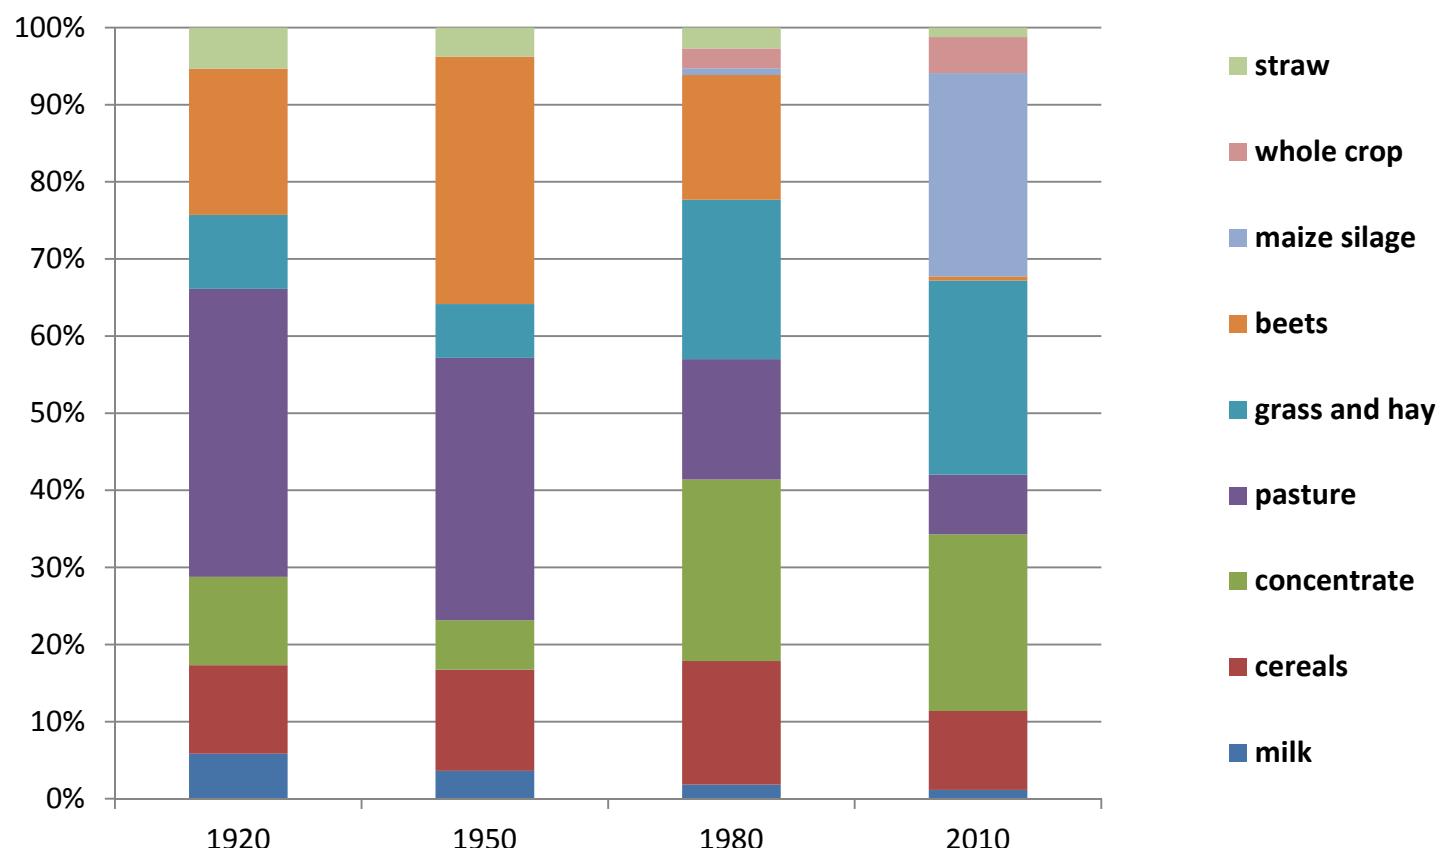

1: Delivered to dairy and used as feed and food on the farm

2: NE for milk and meat in percent of NE intake

3: Protein in milk and meat in percent of protein intake

## Composition of the feed ration – herd level

Net energy

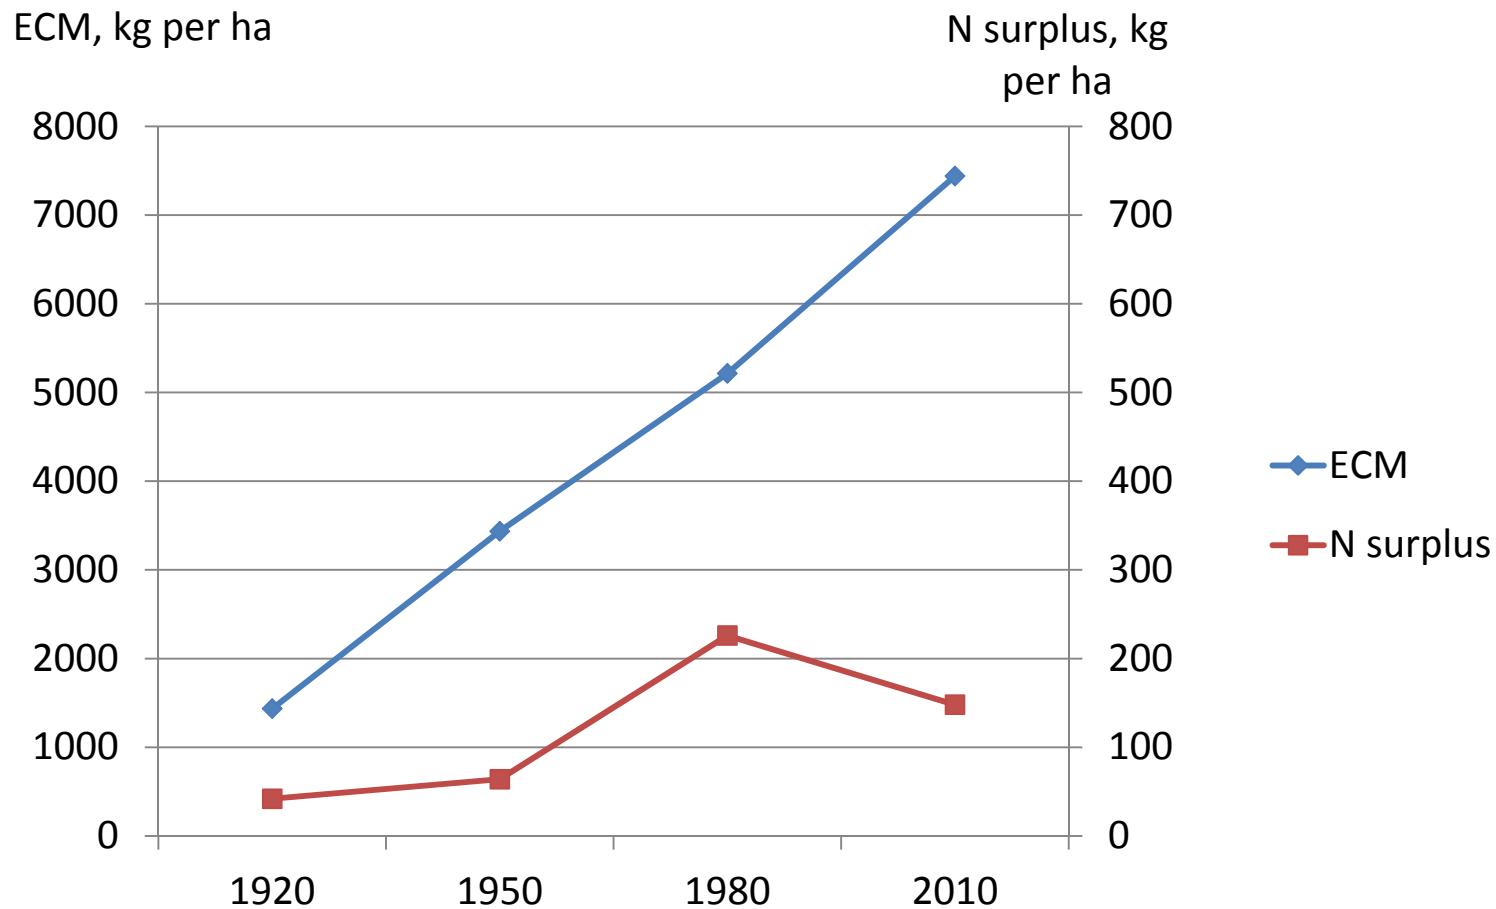

N balance at farm level for typical **dairy farms** – Denmark 1920 -2010

| Year                      | unit                  | 1920 <sup>1)</sup> | 1950 <sup>1)</sup> | 1980 | 2010 |
|---------------------------|-----------------------|--------------------|--------------------|------|------|
| Fertilizer                | Kg N per ha farm land | 5                  | 22                 | 129  | 74   |
| Fixation                  |                       | 29                 | 48                 | 33   | 42   |
| Feed                      |                       | 15                 | 15                 | 103  | 80   |
| Total input               |                       | 49                 | 85                 | 266  | 196  |
| Milk                      |                       | 6                  | 15                 | 27   | 39   |
| Meat                      |                       | 3                  | 5                  | 12   | 9    |

## Sources to emission in the dairy system ab farm

## Development in production of milk and emission of GHG per cow and product

## Summary – dairy production 1950 to 2010 in Denmark

| Year                            | Unit   | 1950 | 1980 | 2010  |
|---------------------------------|--|------|------|-------|
| <b>Production</b>               |  |      |      |       |
| - Yield                         | Kg ECM per cow                               | 3435 | 5058 | 8994  |
| <b>Efficiency</b>               |  |      |      |       |
| - Energy                        | % of intake use for production (milk & meat) | 49   | 57   | 64    |
| - Protein                       | % of intake in product                       | 19   | 16   | 23    |
| - Landuse - global              | Ha per 1000 kg ECM                           | 0,32 | 0,27 | 0,17  |
| <b>Environment</b>              |  |      |      |       |
| - N farm balance                | Kg N per ha farm land                        | 65   | 226  | 148   |
|                                 | Kg N per 1000 kg ECM                         | 22   | 43   | 20    |
| - NH <sub>3</sub> farm emission | Kg N per ha farm land                        | 16   | 41   | 26    |
|                                 | Kg N per 1000 kg ECM                         | 5,4  | 7,9  | 3,5   |
| - Carbon foot print (LCA)       | Kg CO <sub>2</sub> eq per DPU                | 5100 | 9800 | 10700 |
|                                 | Kg CO <sub>2</sub> eq per kg ECM             | 1,48 | 1,94 | 1,20  |

## Change from 1950 to 2010 – due to livestock- or crop production improvement?

Estimated emission, N surplus and land use from cattle production in Denmark

|                                     | GHG                                   | N surplus              | Landuse farm         |
|-------------------------------------|---------------------------------------|------------------------|----------------------|
|                                     | CO <sub>2</sub> eq. x 10 <sup>9</sup> | Kg N x 10 <sup>6</sup> | Ha x 10 <sup>3</sup> |
| 1950                                | 7,76                                  | 115                    | 1766                 |
| 2010 with 1950 crop production      | 7,63                                  | 119                    | 1170                 |
| 2010 with 1950 livestock production | 7,90                                  | 102                    | 932                  |
| 2010                                | 6,94                                  | 122                    | 800                  |

Future: Scenarios for 2040 – milk yield 12500 kg ECM per cow

| Year                       | Unit                                     | 2010 | 2040 – 2010 meat production |                        |                       |
|----------------------------|--|------|-----------------------------|------------------------|-----------------------|

## Concluding remarks

### Cattle production since 1950

- Constant annually increase in milk yield per cow
- Diminishing annually increase in crop yield per ha
- Environmental load peaked in 1980, marked decrease since

### Future development

- Stimulation of productivity
- Holistic product - and farm perspective
