

# Factors affecting metabolites in lambs at slaughter

**Sarah Stewart**

**Peter McGilchrist, Graham Gardner and Dave Pethick**

**Tuesday 26<sup>th</sup> August 2014 - Session 25**

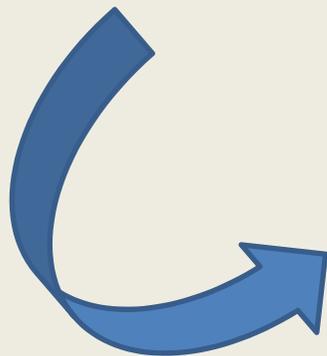

# Outline

- Metabolic indicators of acute pre-slaughter stress
- Previous findings in cattle
- Hypothesis
- Factors influencing metabolites in lamb
- Future research – link metabolites to meat quality and yield

# Metabolic indicators of stress

## Immediately Pre-slaughter

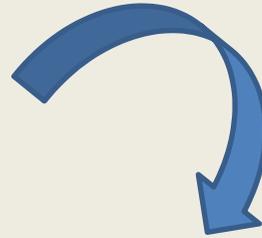

- Human contact
- Social mixing
- Physical activity
- Novel environments

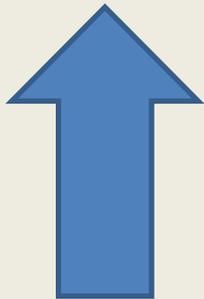

**Acute stress**

# Metabolic indicators of stress

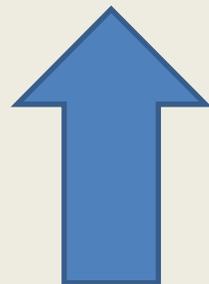

**Acute stress**

**Muscle/liver glycogenolysis**  
**Adipose tissue lipolysis**

Plasma **lactate** and **glucose**

Plasma **NEFA\*** (also chronic)

\*Non-esterified fatty acids

# Metabolic indicators @ slaughter

	<b>Mean <math>\pm</math> SD mmol/L</b>
<b>Lactate</b>	<b>9 <math>\pm</math> 3.2 (3 <math>\rightarrow</math> 37)</b>
<b>Glucose</b>	<b>7 <math>\pm</math> 1.1 (4.7 <math>\rightarrow</math> 11.6)</b>
<b>NEFA</b>	<b>0.4 <math>\pm</math> 0.2 (0.09 <math>\rightarrow</math> 1.2)</b>

(Polkinghorne et al *in press* 2014; Pethick and McGilchrist 2011, Small and Ferguson 2011 )

# Metabolic indicators @ slaughter

		
<b>Lactate</b>		L
<b>Glucose</b>		6)
<b>NEFA</b>		.2)

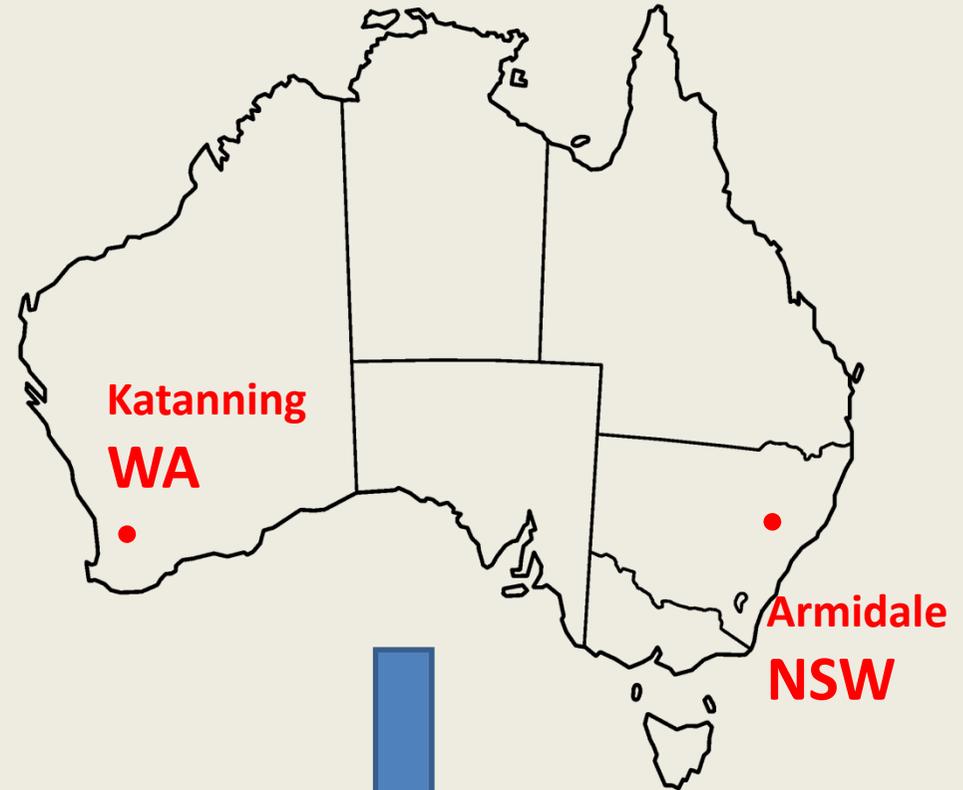

(Polkinghorne et al *in press* 2014; Pethick and McGilchrist 2011, Small and Ferguson 2011 )

# Hypothesis

- Metabolites (lactate, glucose, NEFA) at slaughter will be influenced by
  - Flock
  - Killgroup
  - Breed type (merinos)
  - Time/order of slaughter
- Expect similar results to beef cattle @ slaughter (uncontrolled hypothesis!)

# Methods

- **Prime Lambs n = 1436**
- **Blood collected at slaughter**
- **Sheep CRC/MLA genetic FLOCKS x 2**
- **~ 200 sires (AI dams)**
- **Extensively managed**
- **Killgroups x 14**
- **21 hrs off feed**
  - 2 hours curfew on farm
  - 0.5- 2hours transport
  - ~ 17 hours in lairage

- **Lactate**
- **Glucose**
- **NEFA**

# Methods - Analysis

**Mixed Linear effect models**

**Dependent variables**

Lactate  
Glucose  
NEFA

**Random terms**

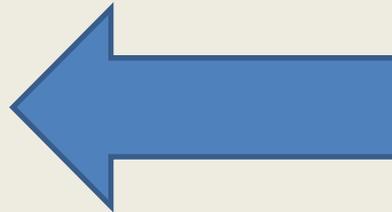

Sire ID  
Dam ID

**Fixed Effects**

Flock  
Killgroup  
Siretype  
Birthtype Reartype  
Age of dam

**Covariates**

Killorder  
HCWT

# Methods - Analysis

**Mixed Linear effect  
models**

**Dependent variables**

Lactate  
Glucose  
NEFA

**Random terms**

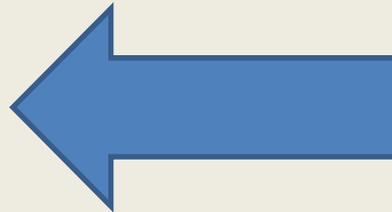

Sire ID  
Dam ID

**Fixed Effects**

FLOCK  
KILLGROUP  
SIRETYPE  
Birthtype Reartype  
Age of dam

**Covariates**

Killorder  
HCWT

# Methods - Analysis

= Time/order of slaughter

- ~6 lambs/min
- Exposure to acute stress
- Flock hierarchy

Dam ID

## Fixed Effects

Flock

Killgroup (flock)

Siretype

Birthtype Reartype

Age of dam

## Covariates

**KILLORDER**

HCWT

# Results

A		BASAL LEVELS (mmol/L)
Glucose		2.5-5.0
Lactate		<0.5
NEFA		0.02-0.05

# Results

A	SLAUGHTER LEVELS (mmol/L)	BASAL LEVELS (mmol/L)
Glucose	$4.9 \pm 0.9$ (2.5 – 8.7)	2.5-5.0
Lactate	$4.2 \pm 2.5$ (0.6 – 16)	<0.5
NEFA	$1.1 \pm 0.5$ (0.2 – 2.8)	0.02-0.05

# Results

A		
Glucose	$4.9 \pm 0.9$ (2.5 – 8.7)	$6.9 \pm 1.1$ (4.7 → 11.6)
Lactate	$4.2 \pm 2.5$ (0.6 – 16)	$9.5 \pm 3.2$ (3.0 → 37)
NEFA	$1.1 \pm 0.5$ (0.2 – 2.8)	$0.4 \pm 0.2$ (0.09 → 1.2)

# Hypothesis

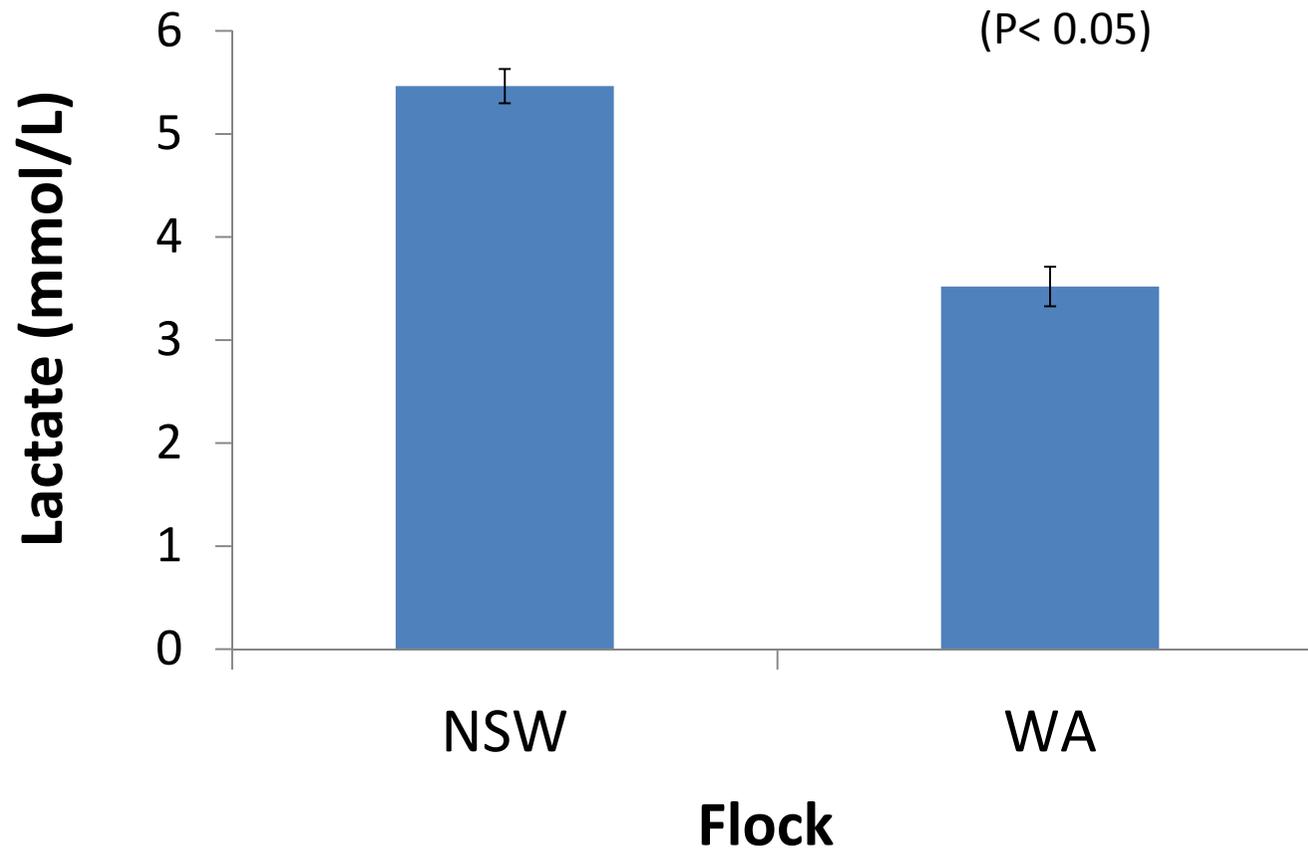

- Metabolites (lactate, glucose, NEFA) at slaughter will be influenced by
  - Flock
  - Killgroup
  - Breed type (merinos)
  - Time/order of slaughter
- **Expect similar results to beef cattle @ slaughter (uncontrolled hypothesis!)**

# What factors affected metabolites?

	LACTATE	GLUCOSE	NEFA
Flock	✓	✓	✓
Killgroup	✓	✓	✓
Killorder	✓	✓	✓

Sire	✓	✓	✓

# Hypothesis

- Metabolites (lactate, glucose, NEFA) at slaughter will be influenced by
  - Flock
  - Killgroup
  - **Breed type (merinos) ?**
  - Time/order of slaughter

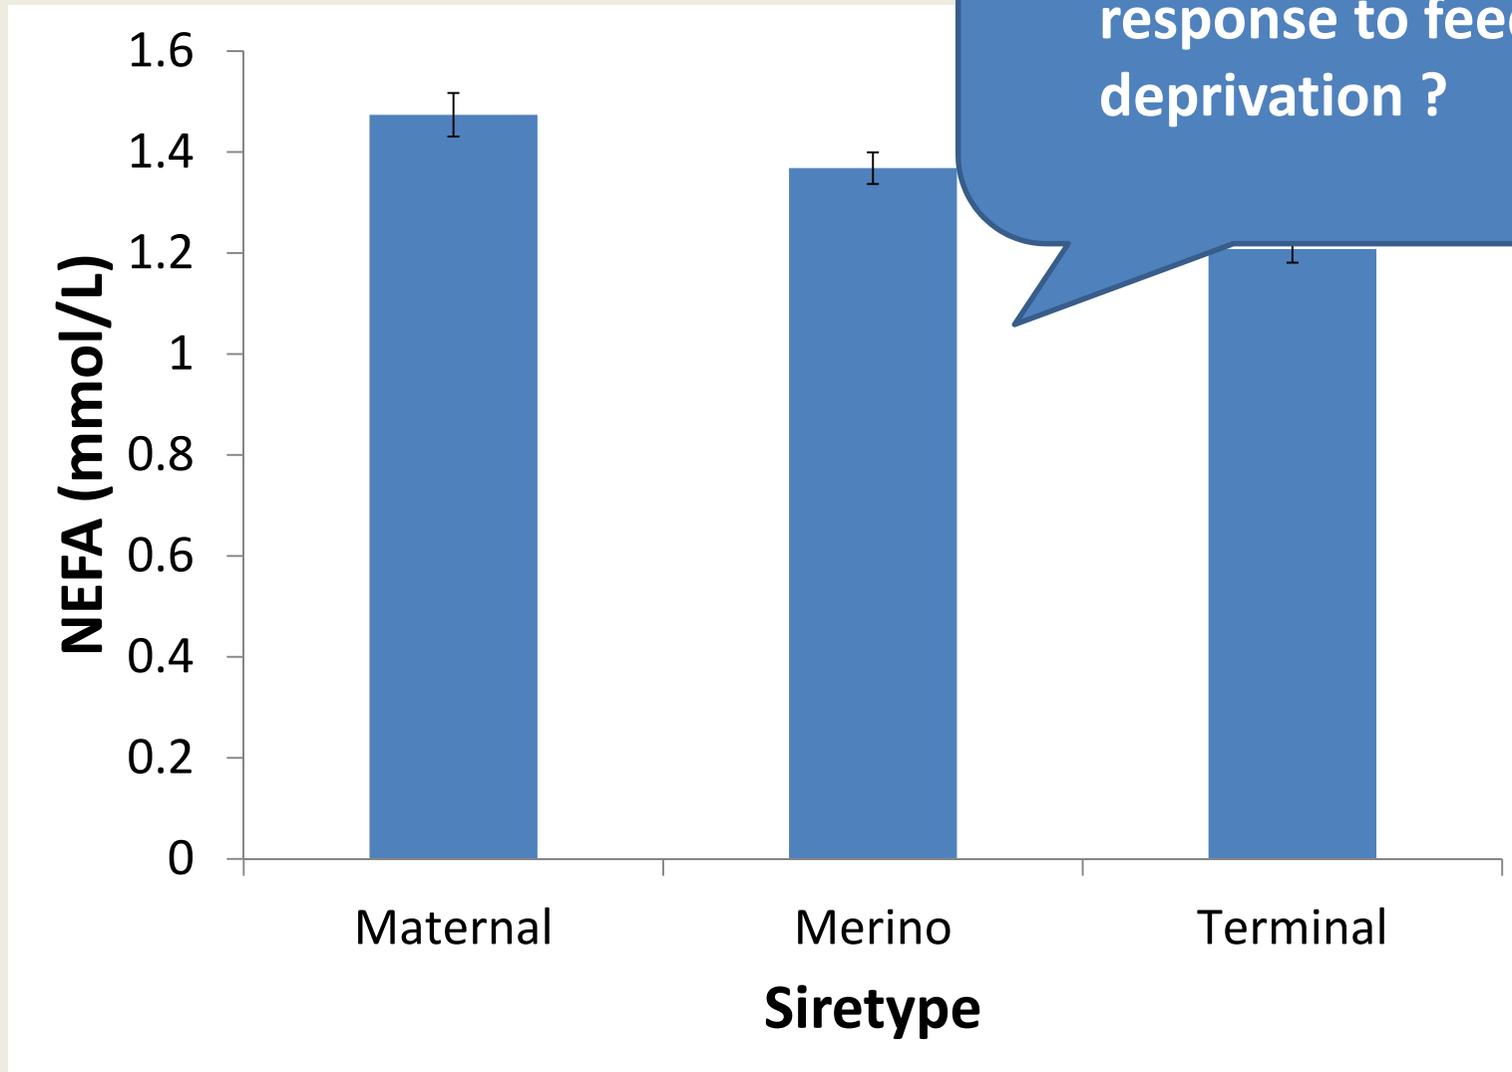

# Merinos have higher lactate

Increased sensitivity to acute stress

Gardner et al 1999

# NEFA

Turnover rates for adipose tissue in response to feed deprivation ?

# Hypothesis

- Metabolites (lactate, glucose, NEFA) at slaughter will be influenced by
  - Flock
  - Killgroup
  - **Breed type (merinos)** 
  - Time/order of slaughter

# Hypothesis

- Metabolites (lactate, glucose, NEFA) at slaughter will be influenced by
  - Flock
  - Killgroup
  - Breed type (merinos)
  - **Time/order of slaughter** ?

# Killorder – Lactate

Killorder

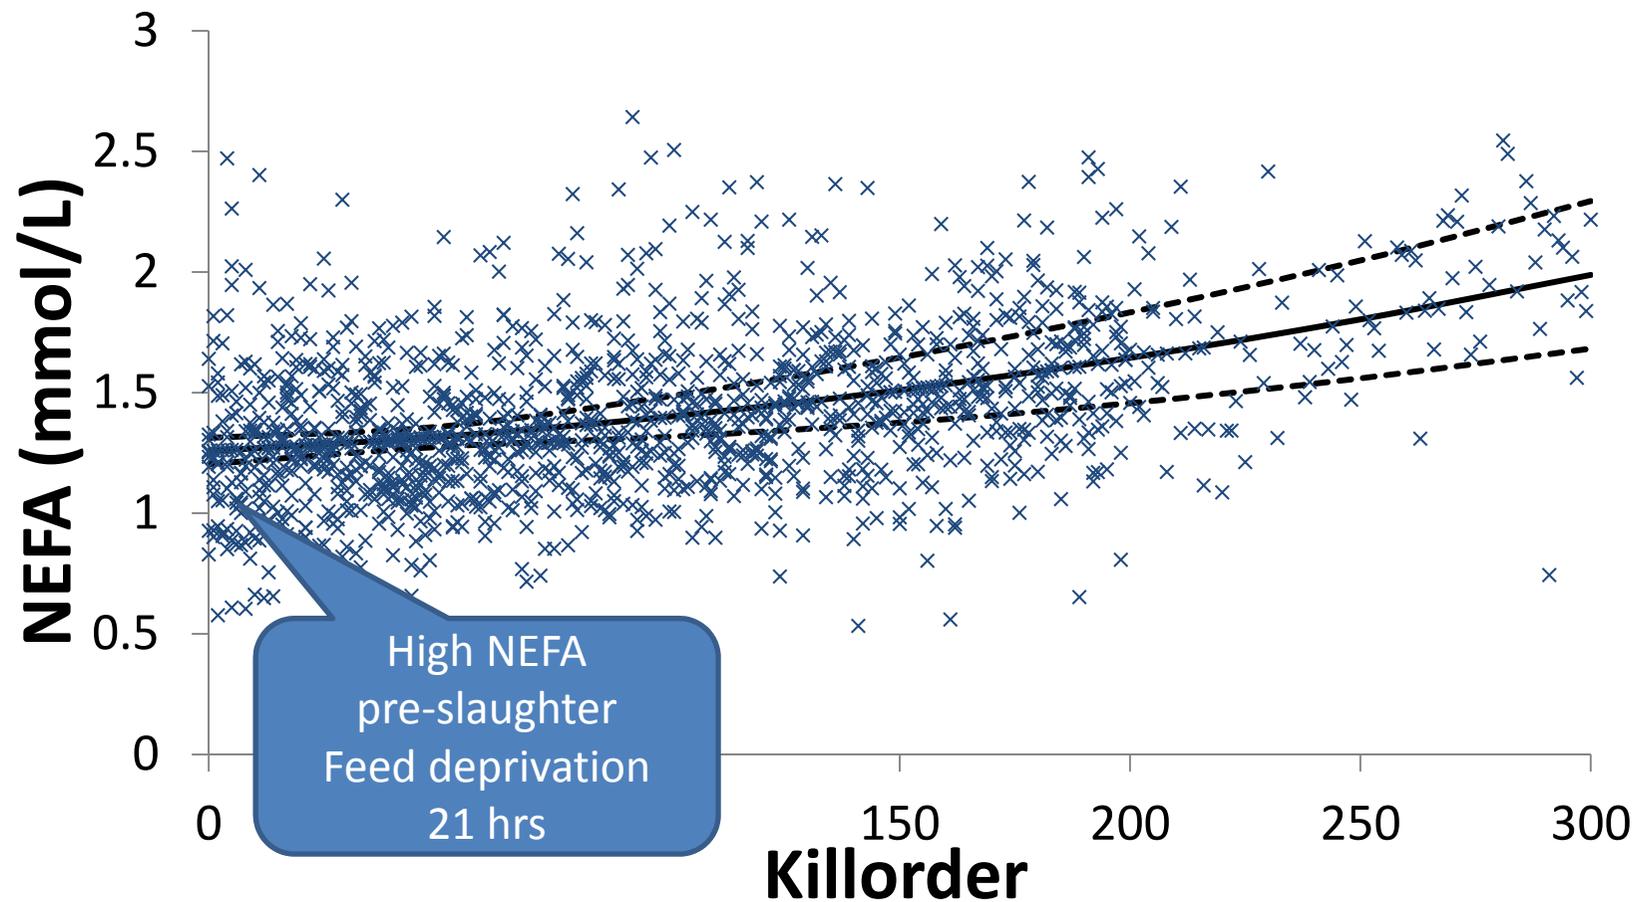

# Killorder – glucose

P<0.05

# Killorder - NEFA

P<0.05

# Hypothesis

- Metabolites (lactate, glucose, NEFA) at slaughter will be influenced by
  - Flock
  - Killgroup
  - Breed type (merinos)
  - **Time/order of slaughter** 

# Summary

- Variation in metabolites exists between flocks and killgroups
  - Abattoir
  - Pre-slaughter management
- Breed type and genetic (sire) effects
- Killorder influenced metabolites
  - Exposure to acute stress
  - Hierarchy effect

# Further work

- Suite of physiological parameters @ slaughter
- Relate to carcass and meat quality
  - Yield and composition
  - Shear force, IMF, colour, pHu
  - Sire genetics
  - Consumer sensory panels
- Biomarkers of lamb meat quality and yield
- Best practice pre-slaughter management

Thank you!
