

# Can biomarkers for oxidative stress early predict BRD in calves?

**V. Sibony, M. Yishay, R. Agmon, A. Orlov, S. Khatib, J. Vaya, A. Shabtay**

**Newe-Ya'ar beef cattle section, agricultural research organization of Israel,**

**Oxidative stress research laboratory, Galilee research institute, Israel**

**Tel-Hai academic college, Kiryat Shmona, Israel**

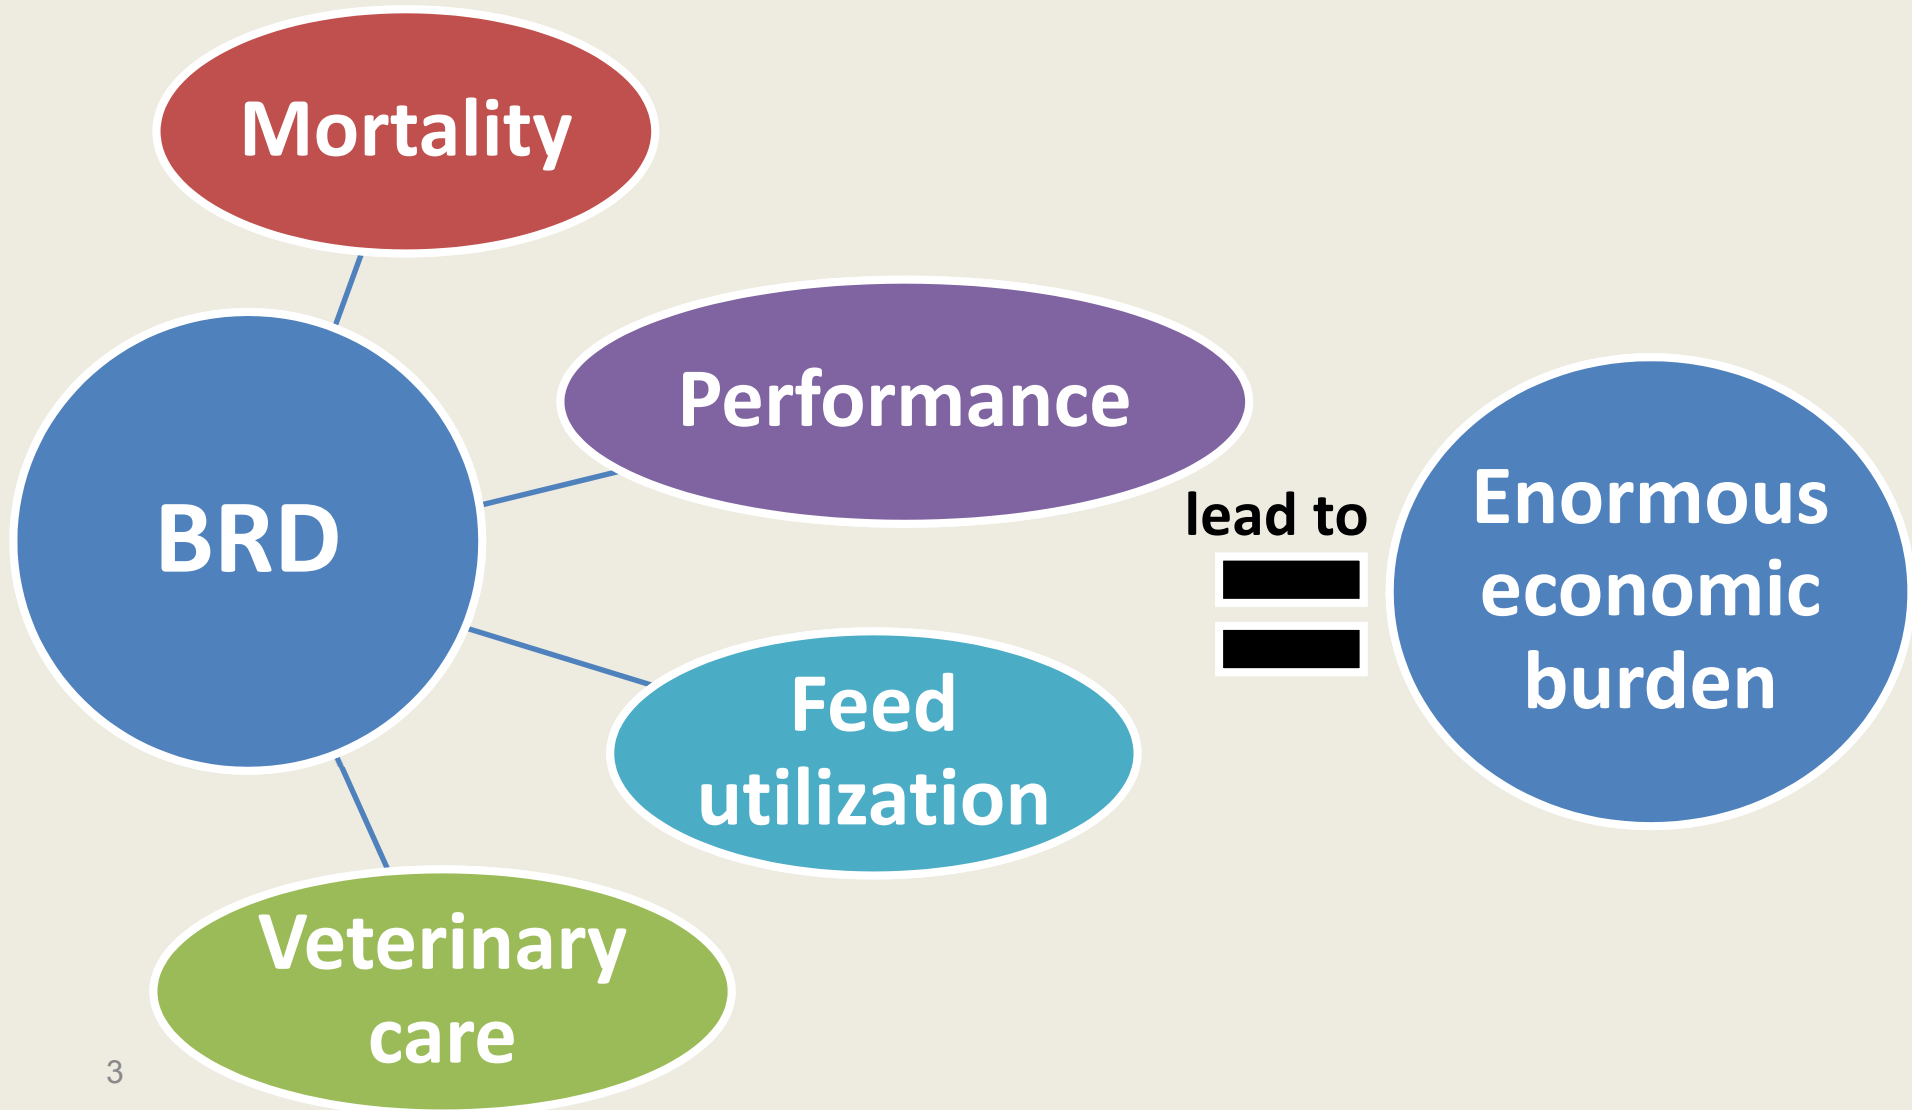

65<sup>th</sup> annual meeting of the EAAP, Copenhagen, Denmark  
August 2014.

# Bovine Respiratory Disease

- Complex of diseases characterized by many types of infections
- The most commonly and costly disease of feedlot cattle
- Causes the main morbidity and mortality of feedlot cattle

# Economic implications of BRD

# Economic implications of BRD

In Israel annual losses are estimated to  
**10 million \$**

In the United States annual losses are  
estimated to **1 billion \$**

# Stress and BRD

- Combination with **stress** cause to sever disease

Major stress event associated with BRD is the **transportation of young calves**

...ogens.

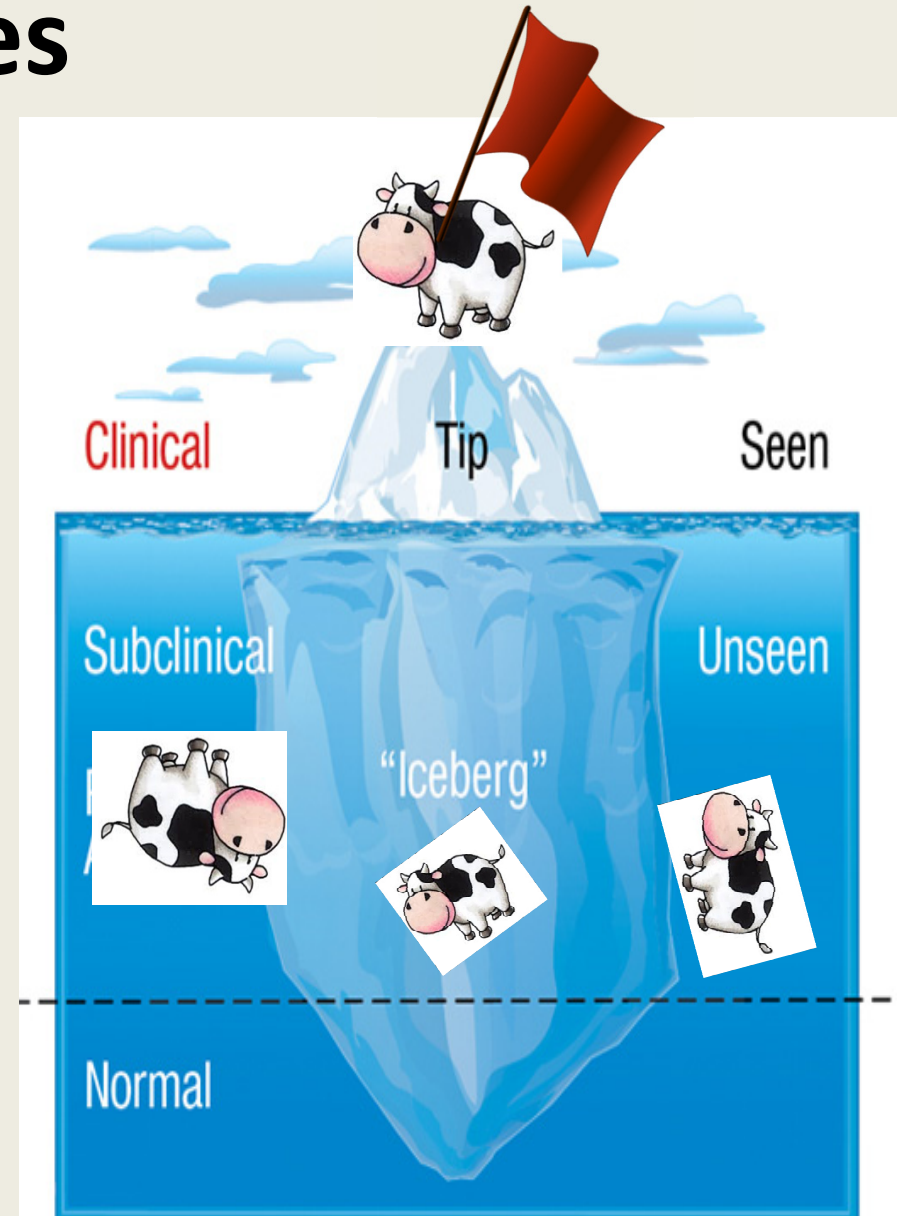

The diagram features a purple oval labeled 'stress' and a red oval labeled 'BRD' partially enclosed by a white line. A blue arrow points from the text 'transportation of young calves' down to the 'BRD' label.

**BRD**

# The problem in identifying sick calves

- Subjective identifications
- The clinical signs are vary widely
- **“Tip of the iceberg”- asymptomatic calves**

# The aims of this study

1. To identify the **individual** physiological response to transportation using physiological and biochemical biomarkers

# The aims of this study

2. To examine the effectiveness of these biomarkers in objective **prediction of BRD** in young calves at early life stage

# The experimental design

- 32 Holstein-Friesian bull calves were transported 20 km (half hour)

at the age of  $8 \pm 2$  days

# The experimental design

- Blood samples were collected from each calf at the following time points **relatively to transportation:**
- **Pre-transportation (0D) and, 1 hour (1H), 4 hour (4H), 1 day (1D), 3 days (3D) and 7 days (7D) post- transportation**

# Materials and Methods

## Immunology

- IgG
- Acute phase protein
- Hsp 72
- NQO1
- ProInflammatory genes

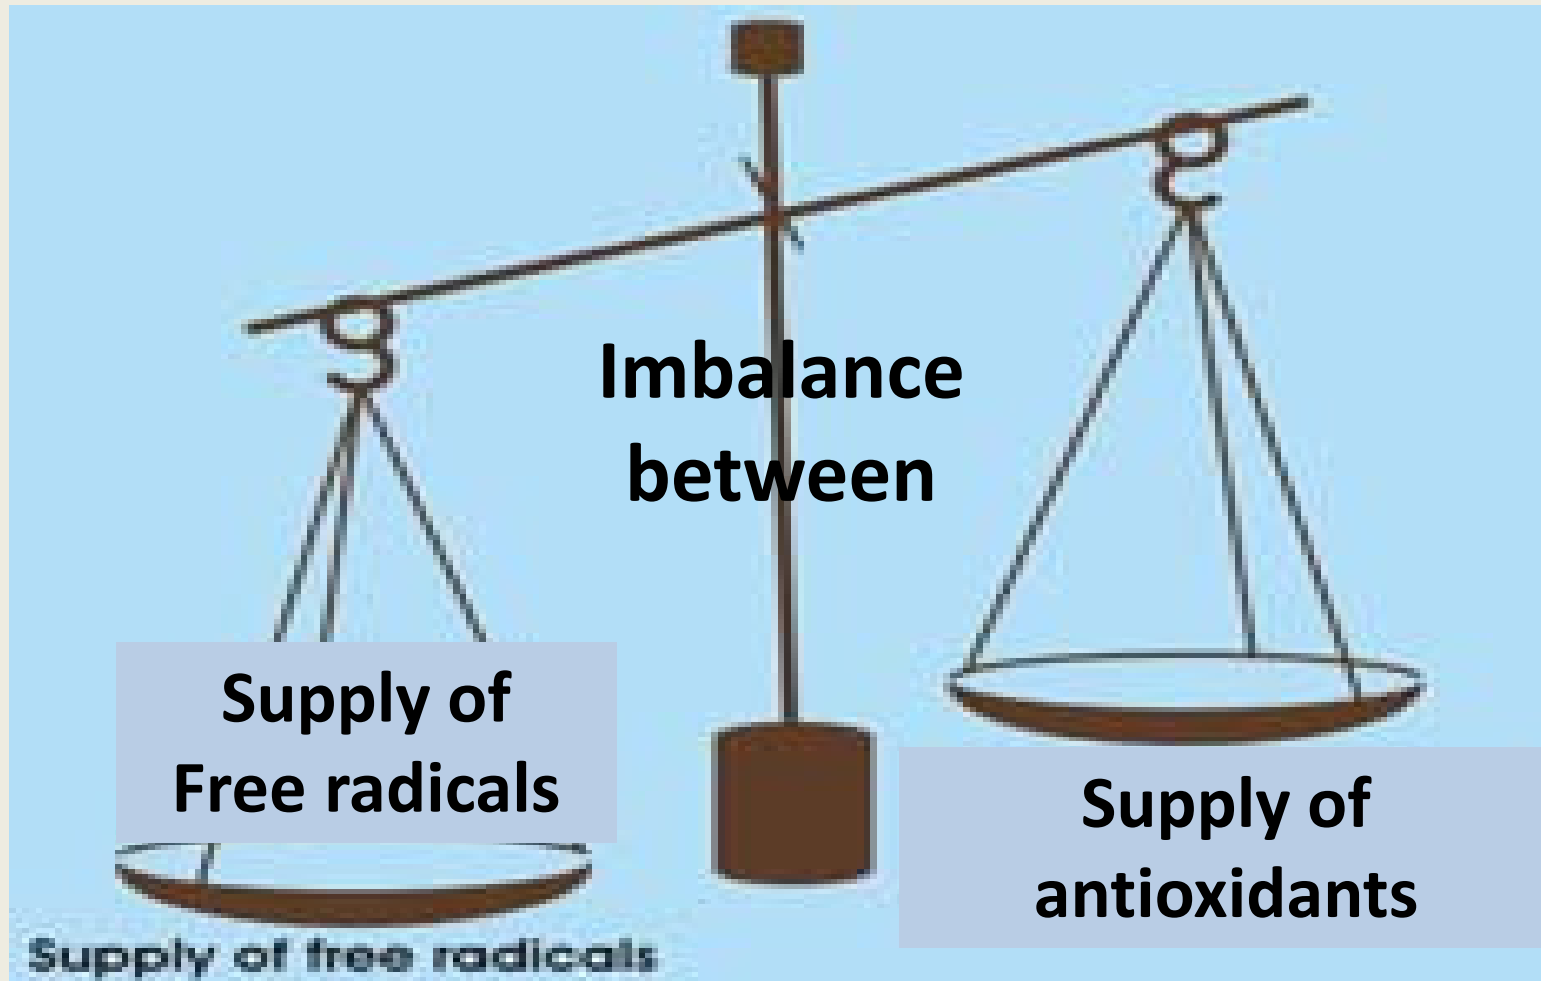

## Metabolic stress

- BHB
- NEFA
- Glucose
- Urea
- Creatinine

## Oxidative stress

- LT
- MDA
- FRAP
- Oxidized fibrinogen

# Oxidative stress indicators

# Exogenous linoleoyl- tyrosine (LT) marker

**Tyrosine**  
Indication for  
protein oxidation

**Linoleic acid**  
oxidation

**Unique oxidative fingerprint for each calf**  
**Correlation between the oxidative fingerprint to specific pathological condition**

LT oxidation products

epoxide  
C9-10,  
C12-13

hydroperoxide  
C9,C13

# Profile of LT oxidation products relatively to transportation

LT-epoxide was found to effectively predict BRD three months ahead, already 1 hour after the stress event

# no oxidative stress behavioral patterns

**Sick**  
Increase in Oxidative  
Stress during  
transportation

**Healthy**  
Transportation does  
not cause Oxidative  
stress

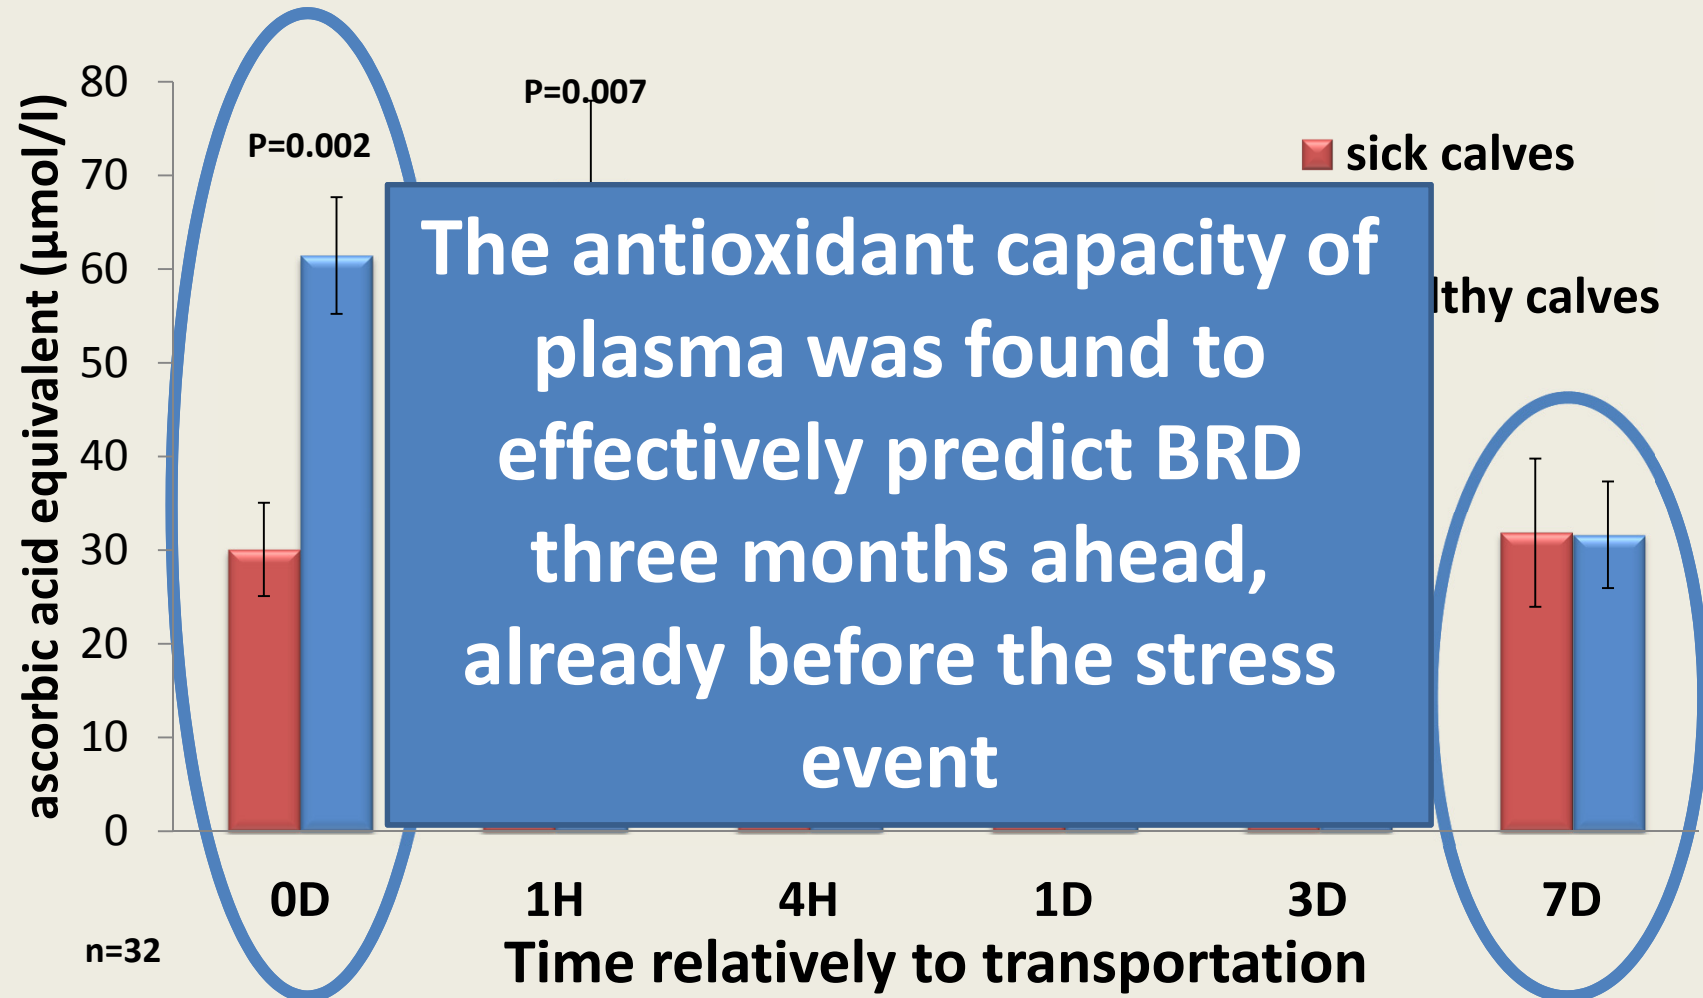

# Antioxidant capacity of plasma

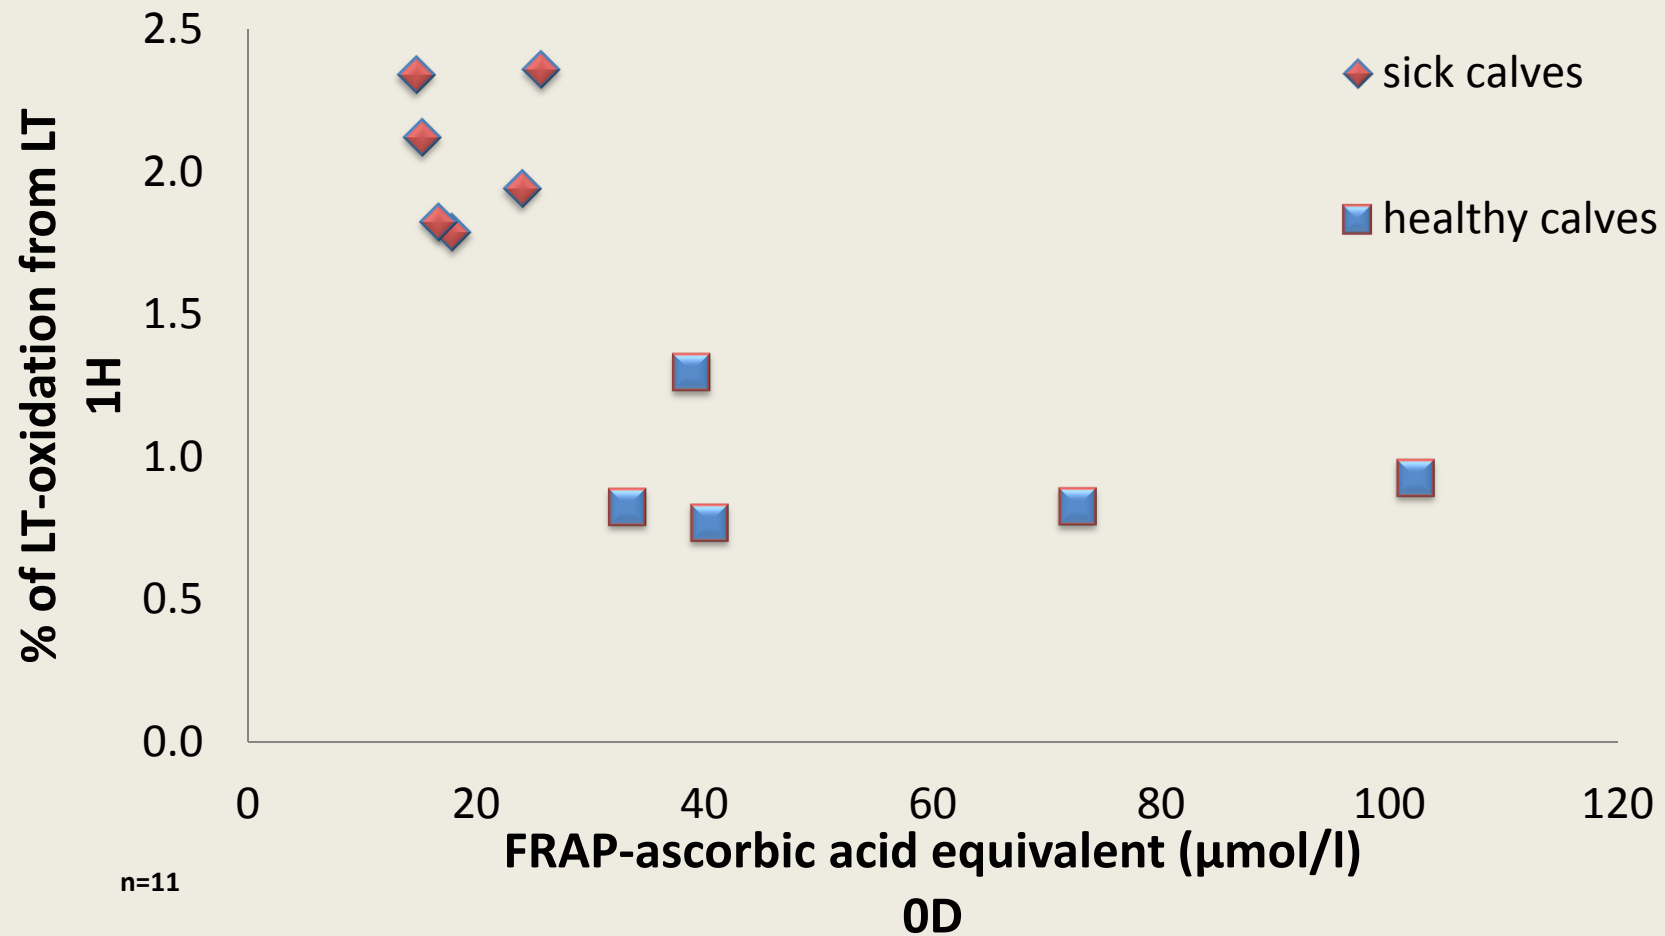

- Antioxidants are chemical compounds that giving an e- to free radicals, convert them to an harmless configuration.
- Including enzymes, hydrophilic scavengers and lipophilic scavengers.
- The great majority of antioxidants are supplied with the diet.
- Measured by **FRAP** method

# Antioxidant capacity of plasma

# The relationship between antioxidant capacity pre -transportation and LT oxidation products post- transportation

n=11

# Conclusions

- Following transportation calves possess differential stress response
- **The susceptibility of calves to BRD can be predicted at early life stage, even before transportation**
- Healthy calves shown higher levels of antioxidant capacity that correlated with lower levels of lipid peroxidation

**To examine whether  
antioxidant therapy,  
pre-transportation, may be used  
to reduce the incidence of  
oxidative stress related morbidity.**

# Acknowledgements

- To the EAAP for the grant to attend the 65th annual meeting
- To the members of the Newe-Ya'ar Beef cattle section
- To the members of the Oxidative stress research laboratory, MIGAL

Thank you for  
your attention!
