ANNUAL MEETING

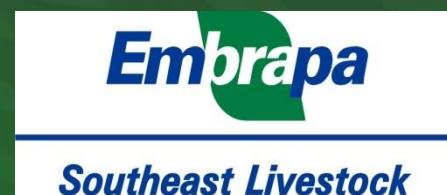

INNOVATION IN LIVESTOCK PRODUCTION: FROM IDEAS TO PRACTICE

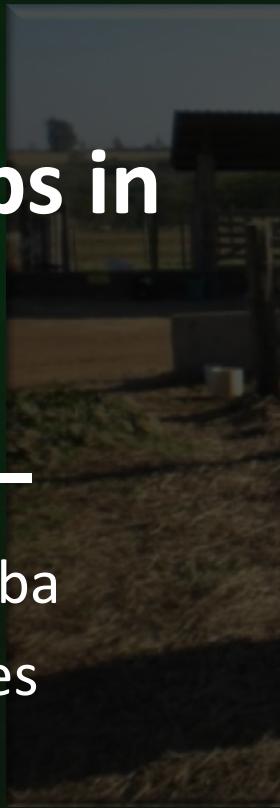

31 AUGUST - 4 SEPTEMBER 2015
WARSAW, POLAND

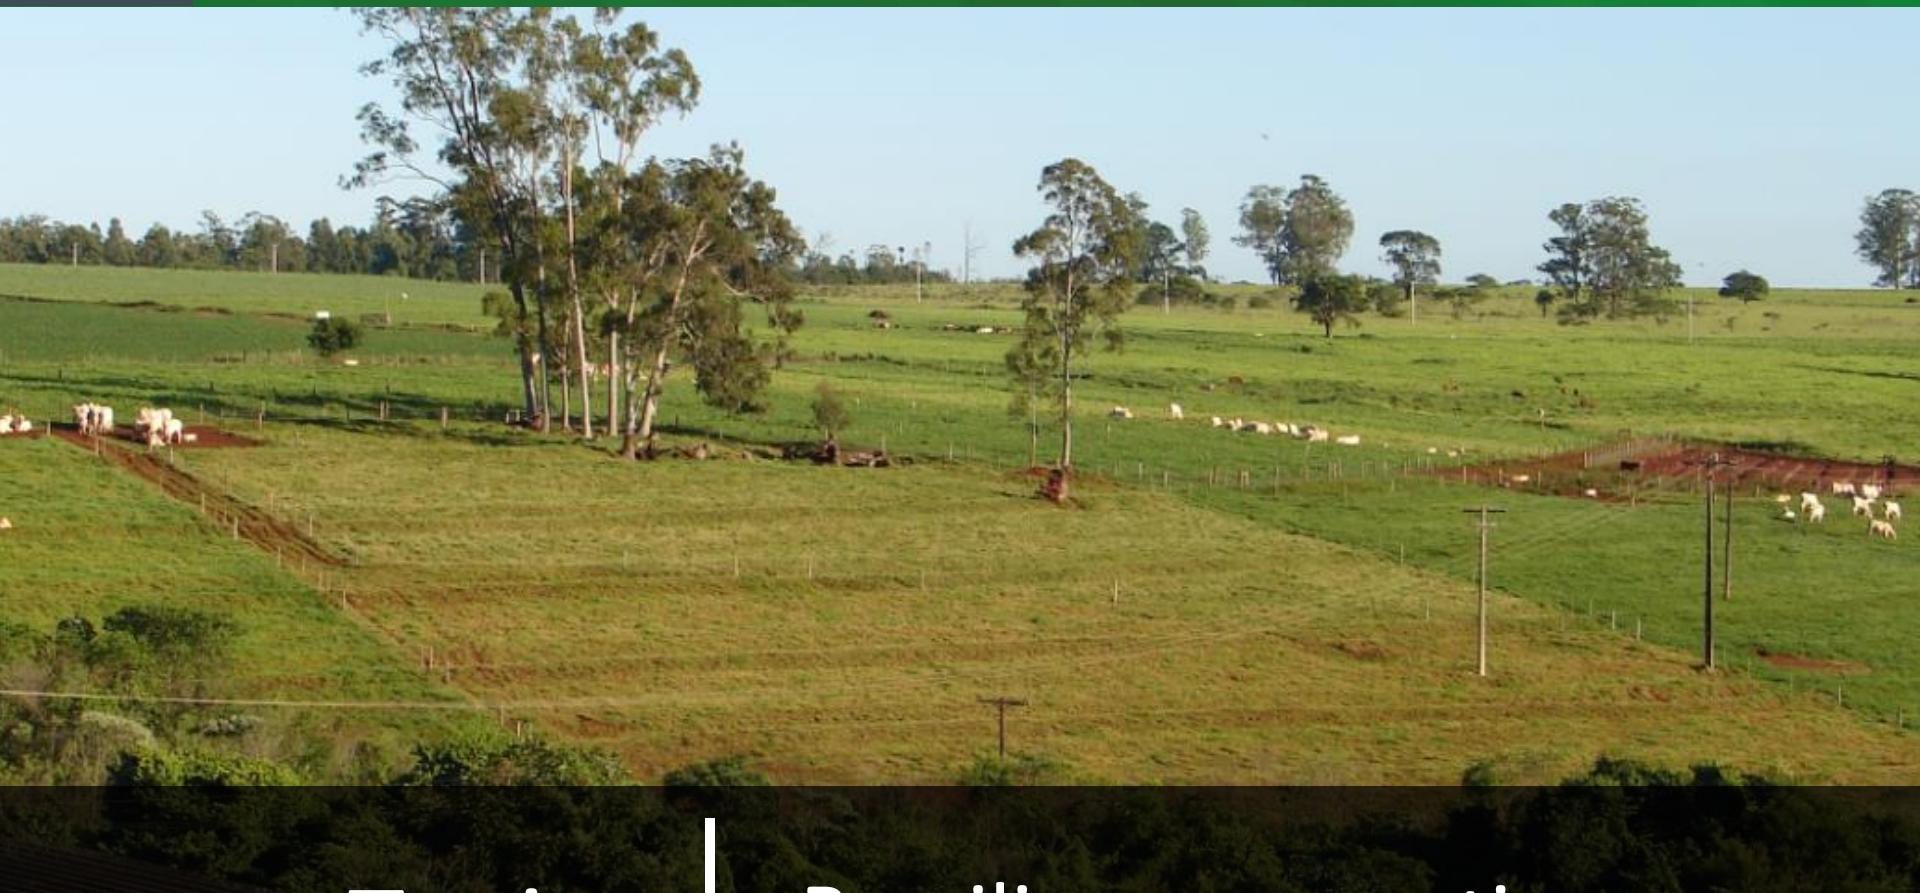

Enteric methane emissions from beef cattle of different genetic groups in confinement in Brazil

Enteric methane emissions from beef cattle of different genetic groups in confinement in Brazil

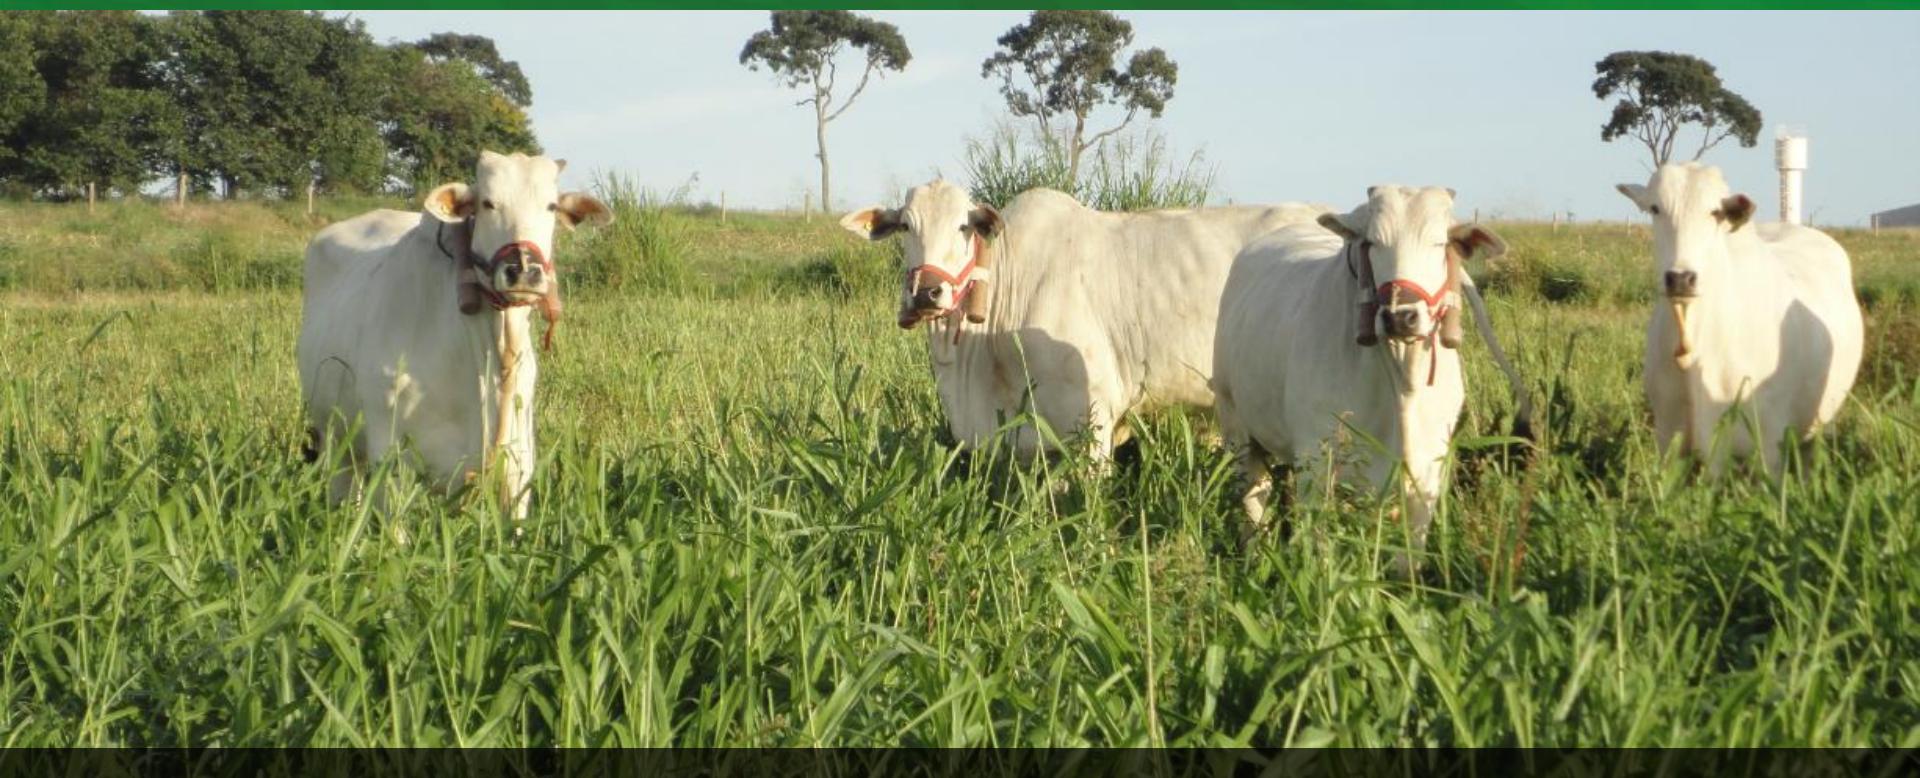

Alexandre Berndt Hira Silva Borba
Leandro Sakamoto Egleu Mendes
Fabio Ferrari Rymer Tullio

Topics

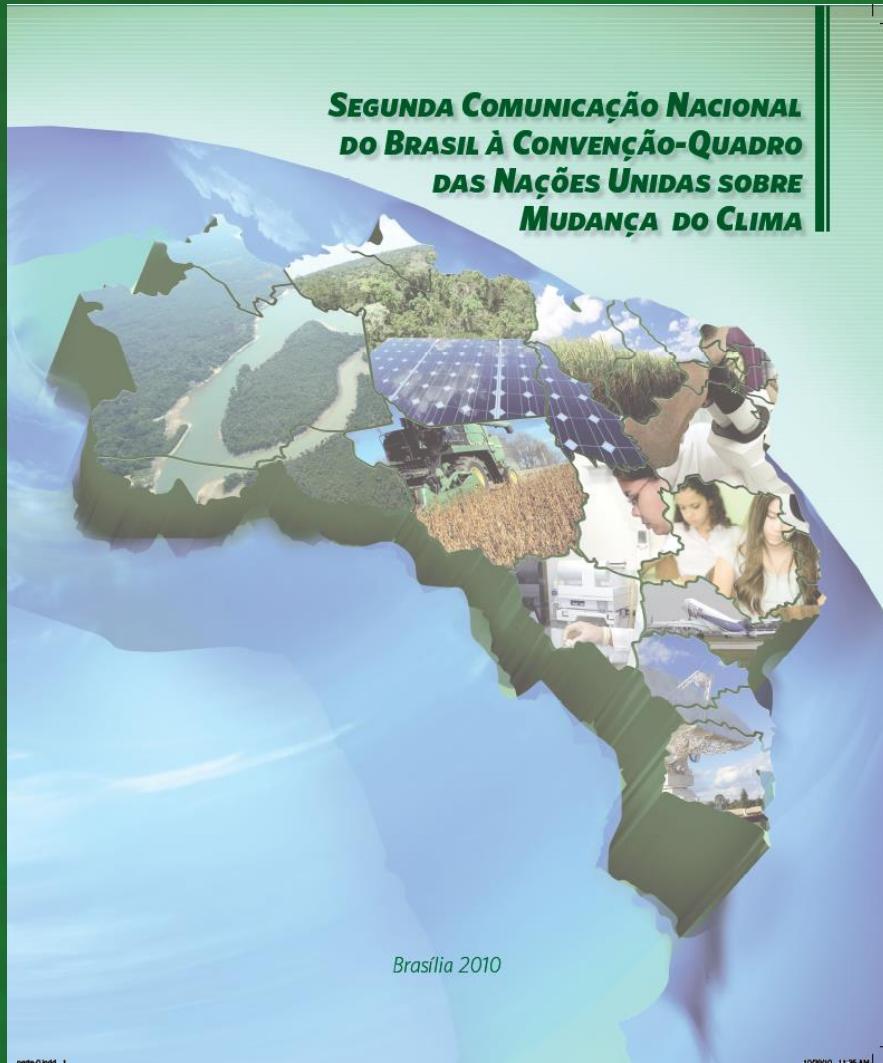

Brazilian perspectives
Methane emissions

Brazilian meat perspectives

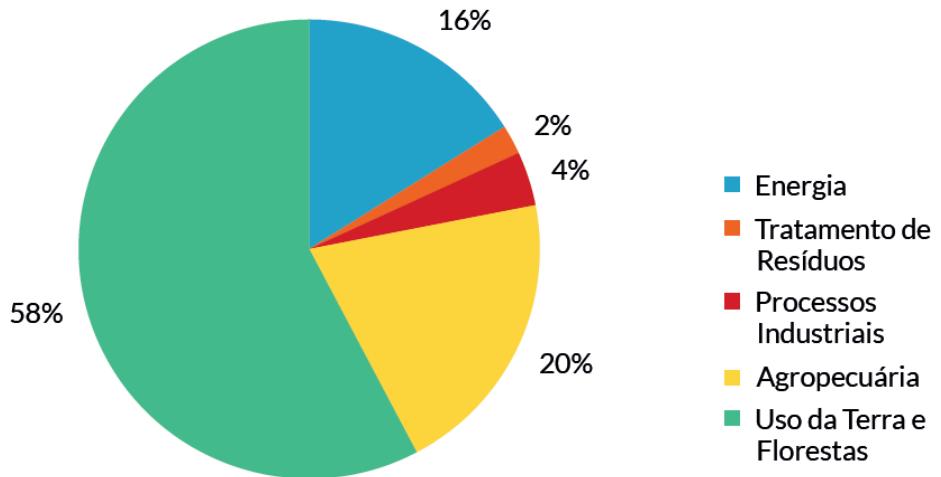

Increasing global demand
Professionalization
Increasing care for sustainability
Increasing care for food quality

MCT I- 2nd National GHG Inventory (2010):

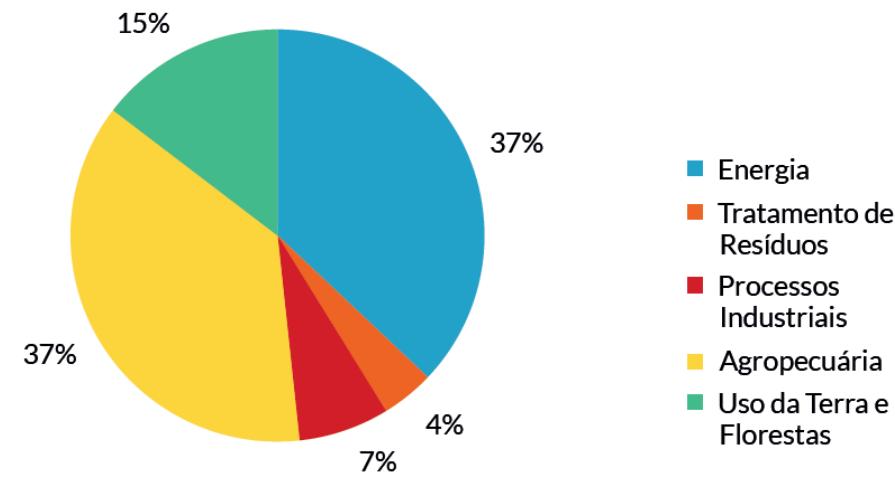

Emission Profile (2012):

Emissões CO₂eq em 2005

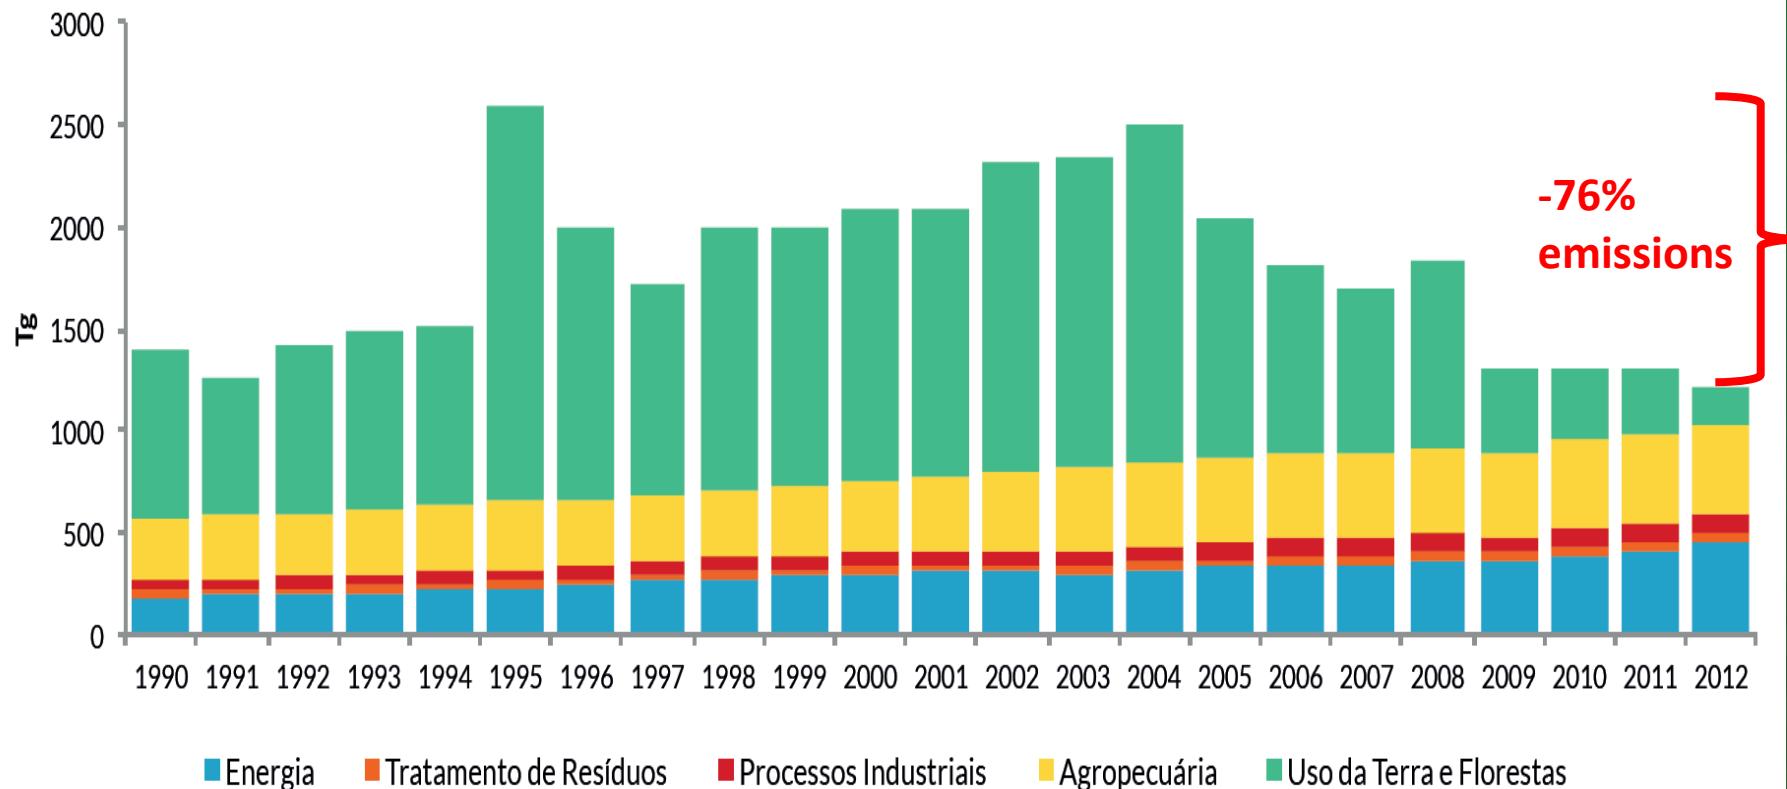

Emissões CO₂eq em 2012

Emission Profile (2012):

Emissões brasileiras de gases de efeito estufa
Período 1990-2012
em CO₂eq

Production vs. expansion decoupling

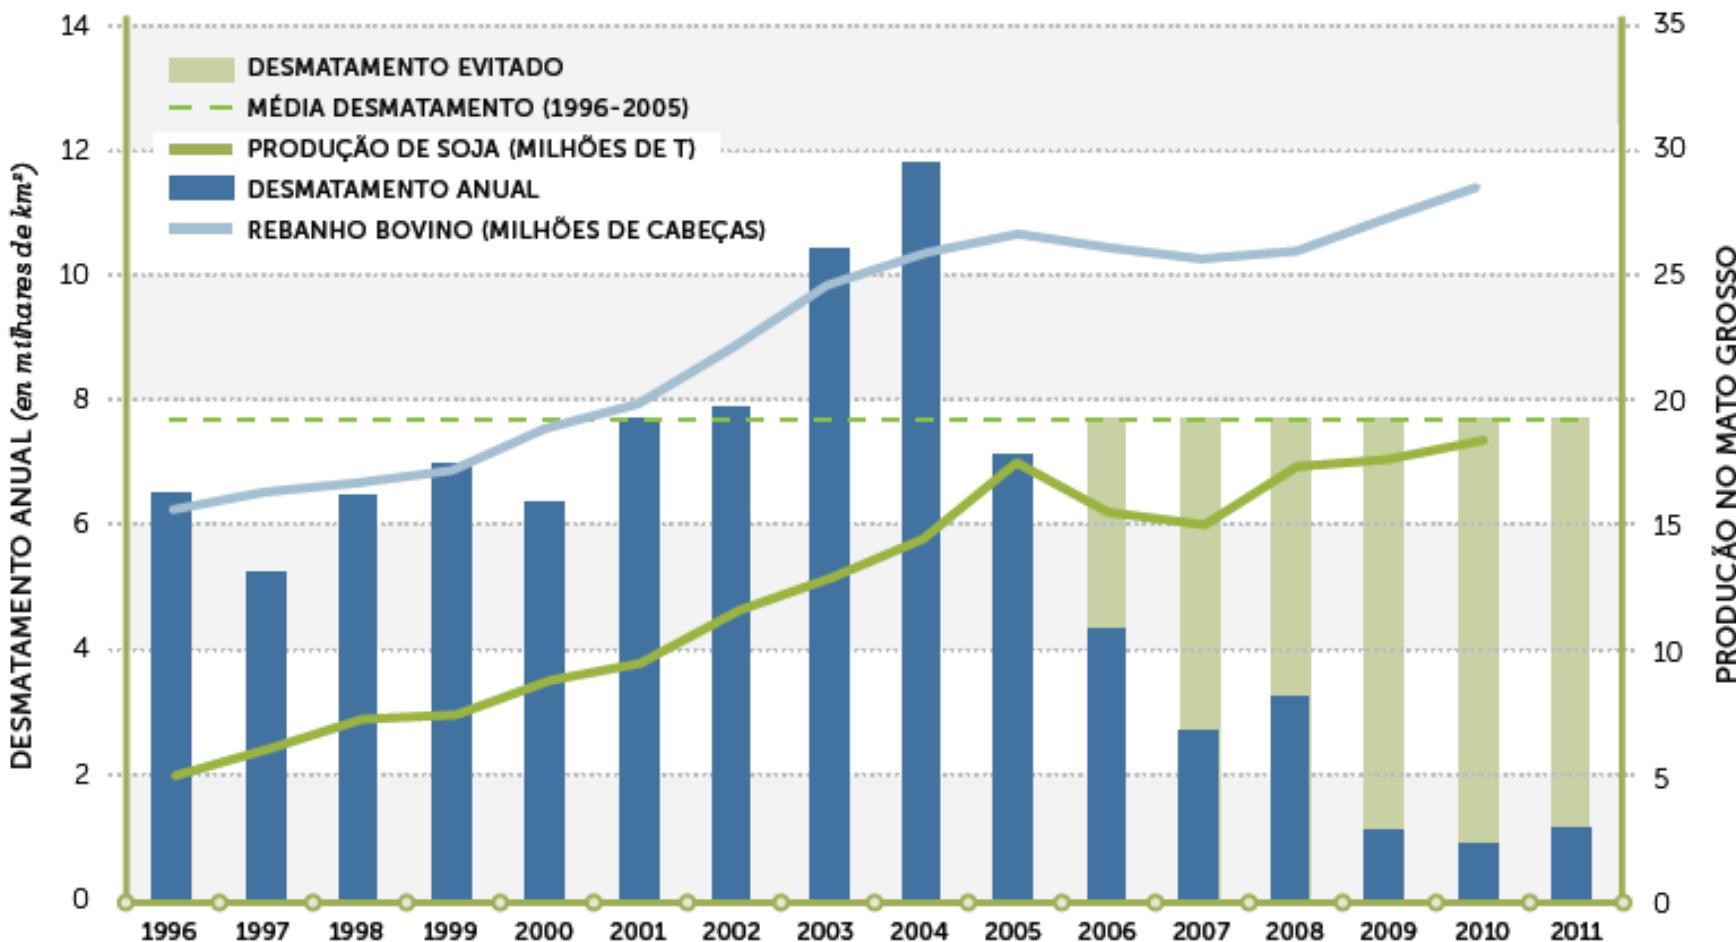

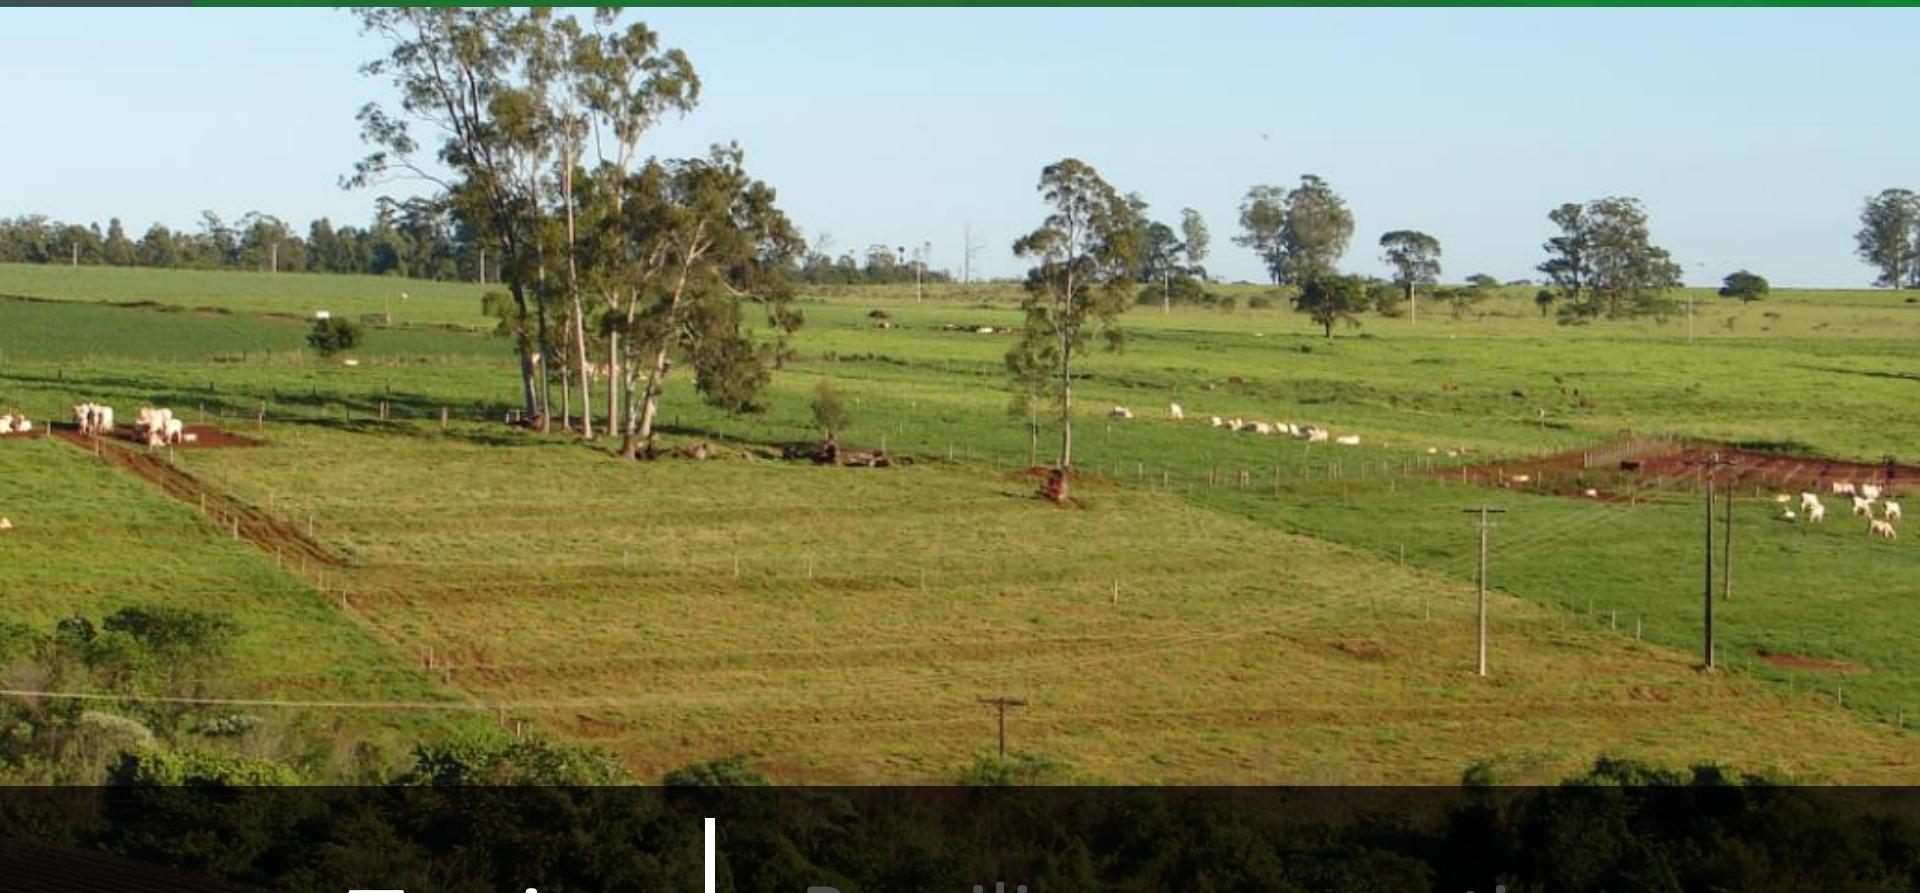

Figura 1: Desmatamento anual, produção de soja, e rebanho bovino em Mato Grosso
(Dados do PRODES, IBGE)

Key message

Brazilian beef sector is determined to contribute to global food production sustainably and healthy.

Topics

Brazilian perspectives
Methane emissions

Objective

Measure methane of cross-bred
beef cattle in confinement, using
GreenFeed

Material and Methods

Animals:

45 steers,

Brangus (5/8 Angus, 3/8 Brahman)
Canchim (5/8 Charolais, 3/8 Zebu)
Bosnmara (5/8 Africander, 3/16 Hereford,
3/16 Shorthorn)

	Bull Breeds			
	Canchim	Bonsmara	Brangus	P
Days confined	95±13	92±13	94±17	0.9622
Initial weight (kg)	365±27	323±54	352±28	0.1783
Final weight (kg)	533±45	484±51	520±52	0.2782

Before feedlot

Maize silage	43.0%
Grounded maize	48.3%
Soybean meal	3.7%
Bicarbonate	1.0%
Mineral premix	1.5%
Urea	1.0%

Nutritional value	
Dry matter	63%
Crude protein	12%
TDN	71%
Ca:P ratio	1.33

In the feedlot

Results

No differences in
feedlot performance
nor emissions

Results

	Bull Breed			
	Canchim	Bonsmara	Brangus	P
CH₄ (g/d)	162.5±26.6	166.3±35.6	169.8±34.1	0.9160
CO₂ (g/d)	6138±698	6470±444	6382±680	0.6643
CH₄ (kg/yr)	59.3±9.7	60.7±13.0	62.0±12.5	0.9150
DWG (kg/d)	1.803±0.331	1.766±0.269	1.802±0.328	0.9762
DMI kg/d	11.6±1.0	11.3±1.1	12.3±1.5	0.3116
YM (%)	4.4±0.7	4.7±1.5	4.3±0.6	0.7213
FE (kg/kg)	6.5±0.8	6.4±0.5	6.9±0.9	0.4177

Conclusion

Crossbreed can be used to produce meat efficiently

Next steps

Rumen microorg.
Meat metabolomics
 CH_4 mitigation
