# Potential new indicators predicting longer productive lives in dairy cows

Abstract #23353

Collaborative project

Prof. M. v. Bergen (Leipzig),

Prof. S. Dänicke (Braunschweig),

Prof. J. Rehage (Hannover),

Prof. H. Sauerwein (Bonn)

} and all members of the workgroups

*Genomic selection:  
high-genetic merit  
Holstein dairy cow*

*Inter-individual variation in adaptation to lactation*

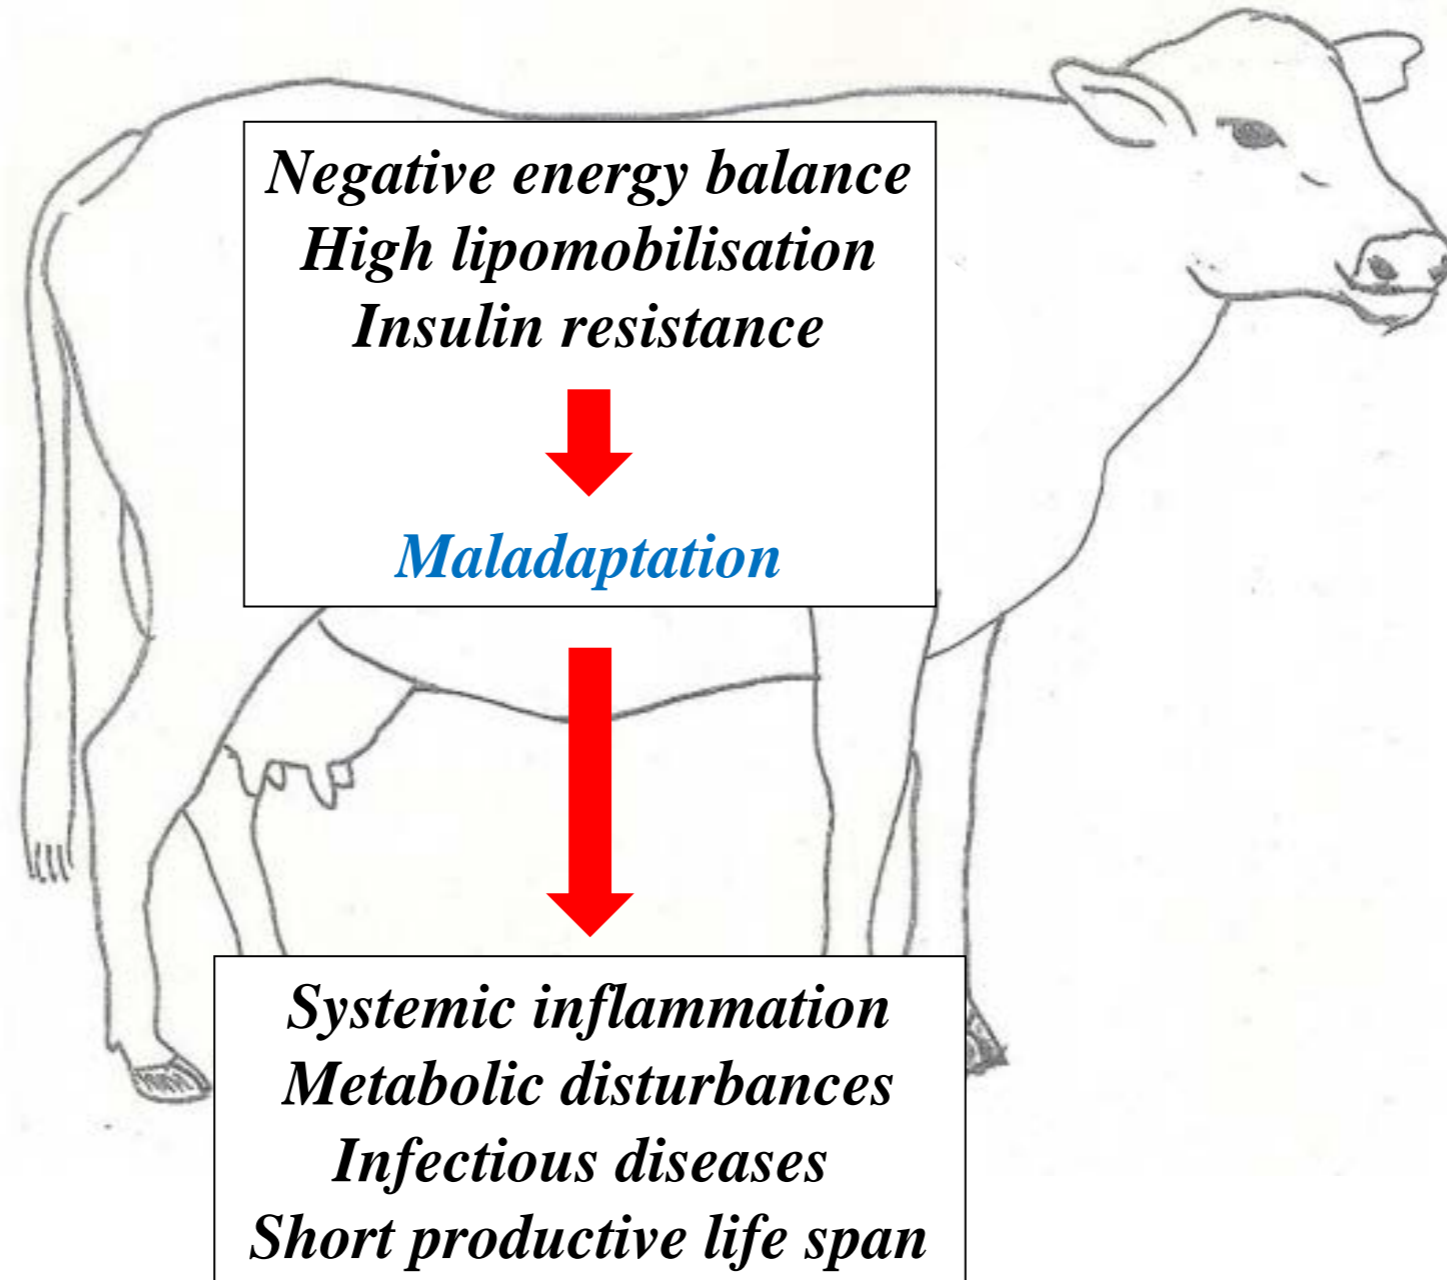

*health*

*disease*

Management  
matches  
genetic needs

Management  
does not match  
genetic needs

# Maladaptation in individual cows

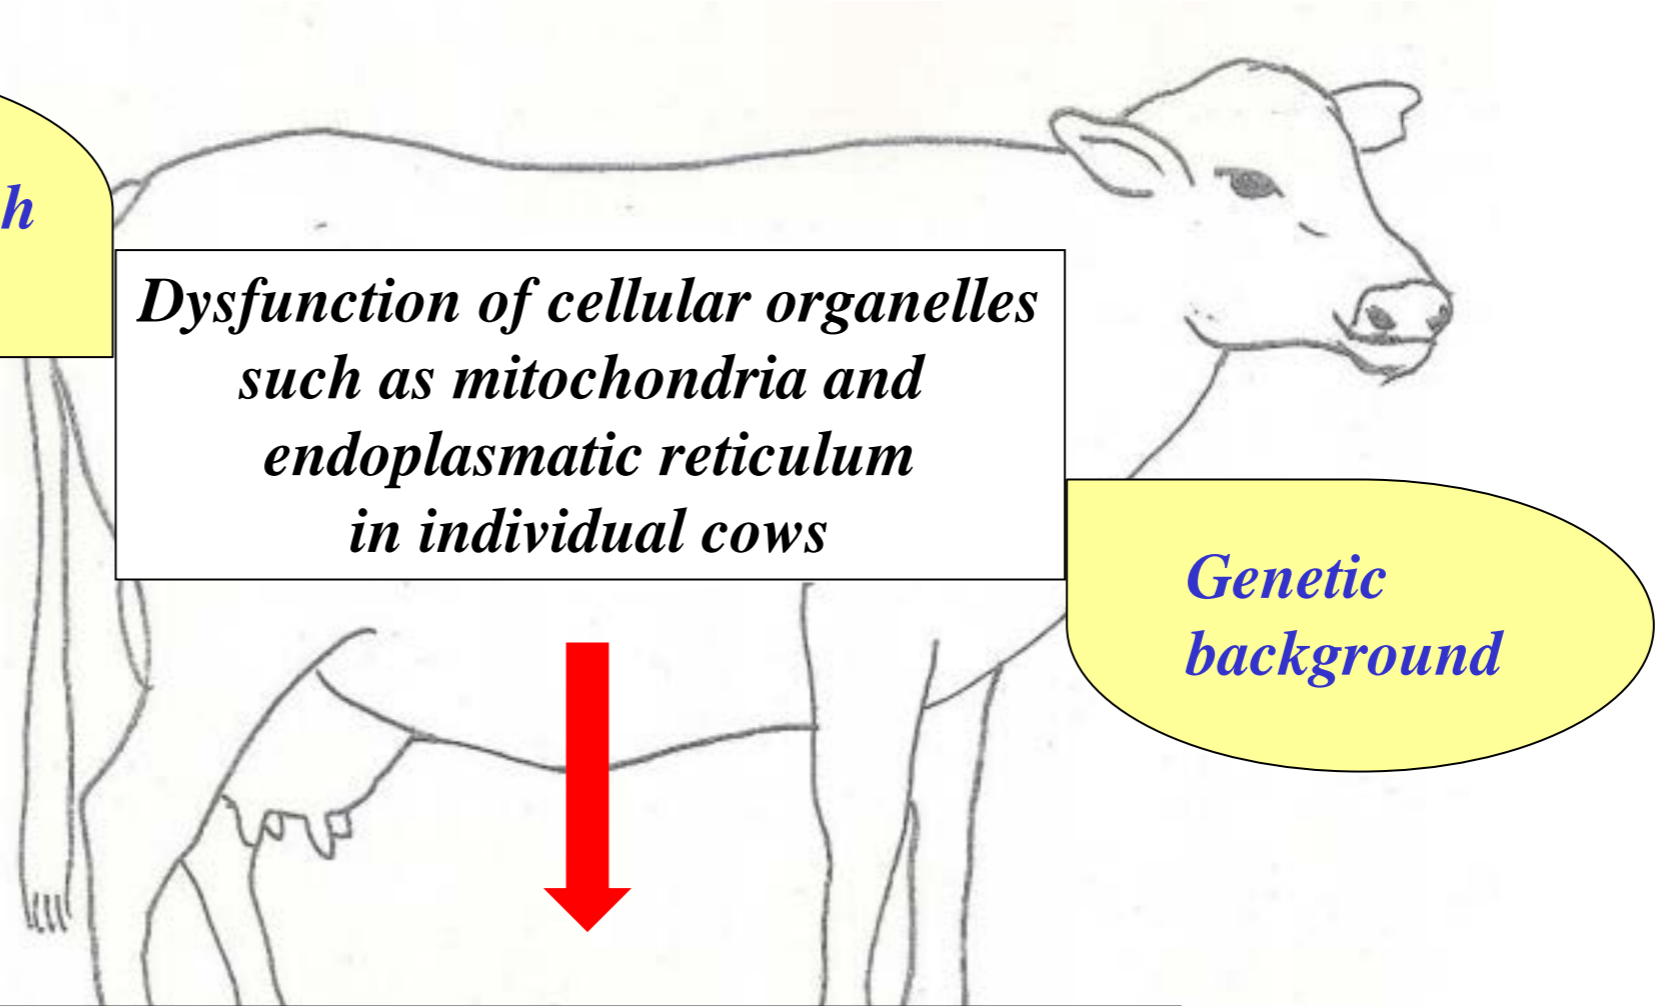

# Reasons for maladaptation in individuals? - Hypotheses

*Management does not match genetic needs*

*Dysfunction of cellular organelles such as mitochondria and endoplasmic reticulum in individual cows*

*Genetic background*

*Early announcement of this dysfunction?  
Indicators for cellular dysfunctions?*

- ➔ 19 Holstein cows, 2nd to 4th lactation
- ➔ Experimental time: day -42 in relation to parturition until day +100 postpartum
- ➔ Measures of BCS (ante partum), DMI, EB, milk yield, BFT, VAT, Liver TAG
- ➔ Plasma samples at day -42, +3, +21 and +100 for assessment of classical physiological variables and hormones *and* for a targeted metabolomic approach (180 metabolites/day/cow)
- ➔ History of cow - day of leaving productive life

# Grouping according to history

Leaving productive life early  
within current lactation  
(after day 100)  
8 cows = **Group LE**

Healthy status  
throughout current lactation  
11 cows = **Group H**

## **Biocrates Absolute IDQ® p180 panel** (Biocrates Innsbruck, Austria)

for **targeted, standardised and quality controlled metabolic phenotyping**  
based on LC/MS-MS analysis (unit  $\mu\text{mol/l}$ )

Metabolic phenotypes were assessed by determination of

- Acylcarnitines (40)
- Amino acids and amines (40)
- Glycerophospholipids (90)
- Sphingolipids (15)
- Sugars (1)

---

Bioinformatic evaluation of data (software package R ([www.r-project.org](http://www.r-project.org)))

Volcano Plots to assess metabolites of interest

All values - Two Way ANOVA for factors day and group; and day x group interactions

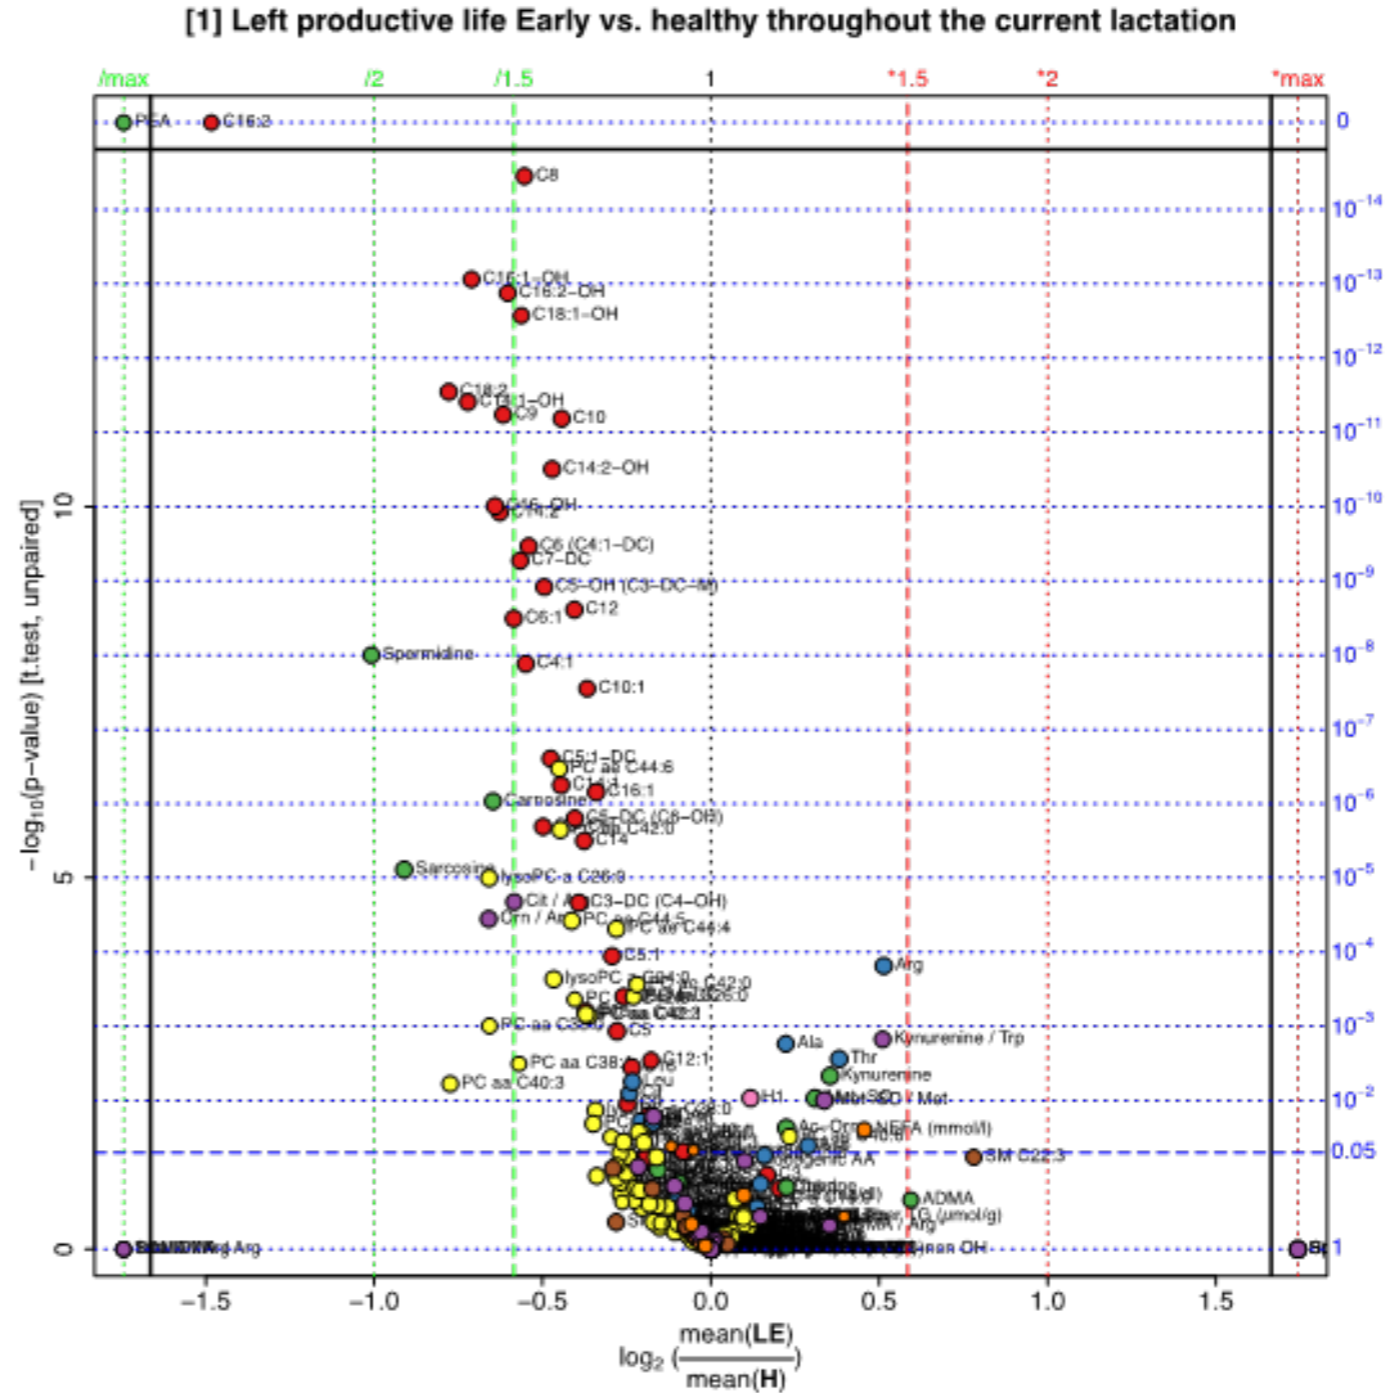

# Volcano Plot

as bioinformatic tool to identify metabolites of interest

Left = higher in H

Right = lower in H

(40 vs. 54 samples, 236 of 236 analytes)

# Results and Discussion

## *Classical indicators*

DMI (kg/d)

day-42

day+3

day+21

day+100

■ LE  
■ H

LE

H

kg milk/d lactation

LE

H

# Results and Discussion

## *Classical indicators*

Energy balance (MJ/d)

day-42

day+3

day+21

day+100

■ LE  
■ H

periparturient days

Back fat thickness (mm)

day-42

day+3

day+21

day+100

# Results and Discussion

## *Classical indicators*

NEFA (mmol/l)

day-42    day+3    day+21    day+100

■ LE  
■ H

periparturient days

Liver Triglycerides (nmol/mg)

day-42    day+3    day+21    day+100

# Results and Discussion

## *Classical indicators*

Insulin (mU/l)

day-42    day+3    day+21    day+100

■ LE  
■ H

periparturient days

BHBA (mmol/l)

day-42    day+3    day+21    day+100

*Classical indicators  
did not show any differences  
between H and LE cows*

# Results and Discussion

## *Adiponectin*

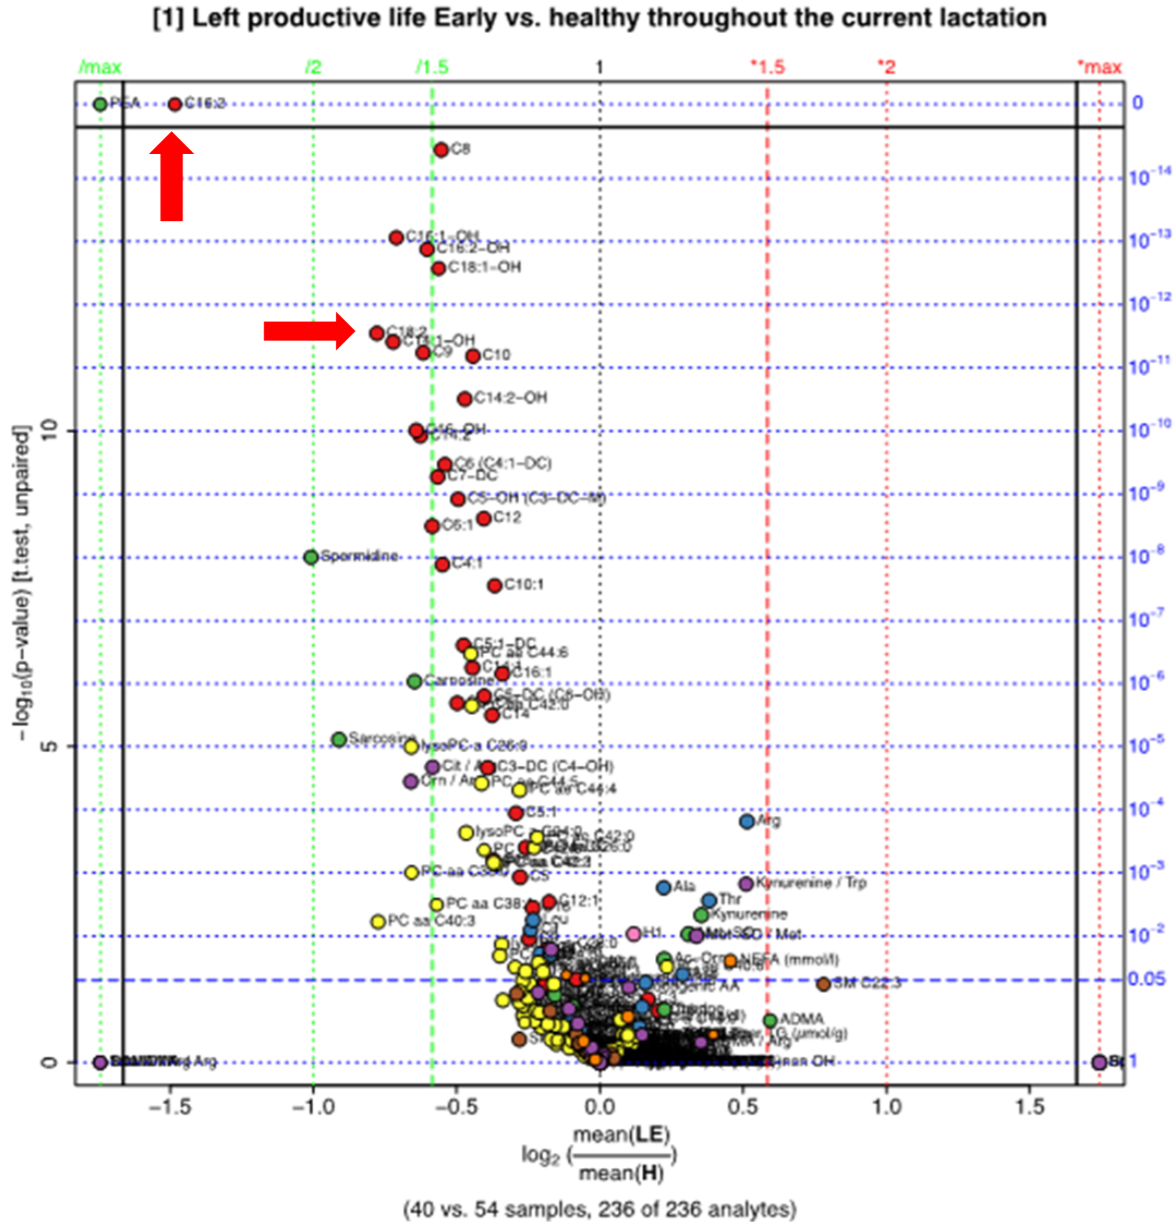

## *Visceral adipose tissue mass*

# Results and Discussion

## Carnitine

Carnitine ( $\mu\text{mol/l}$ )

day -42

day+3

day+21

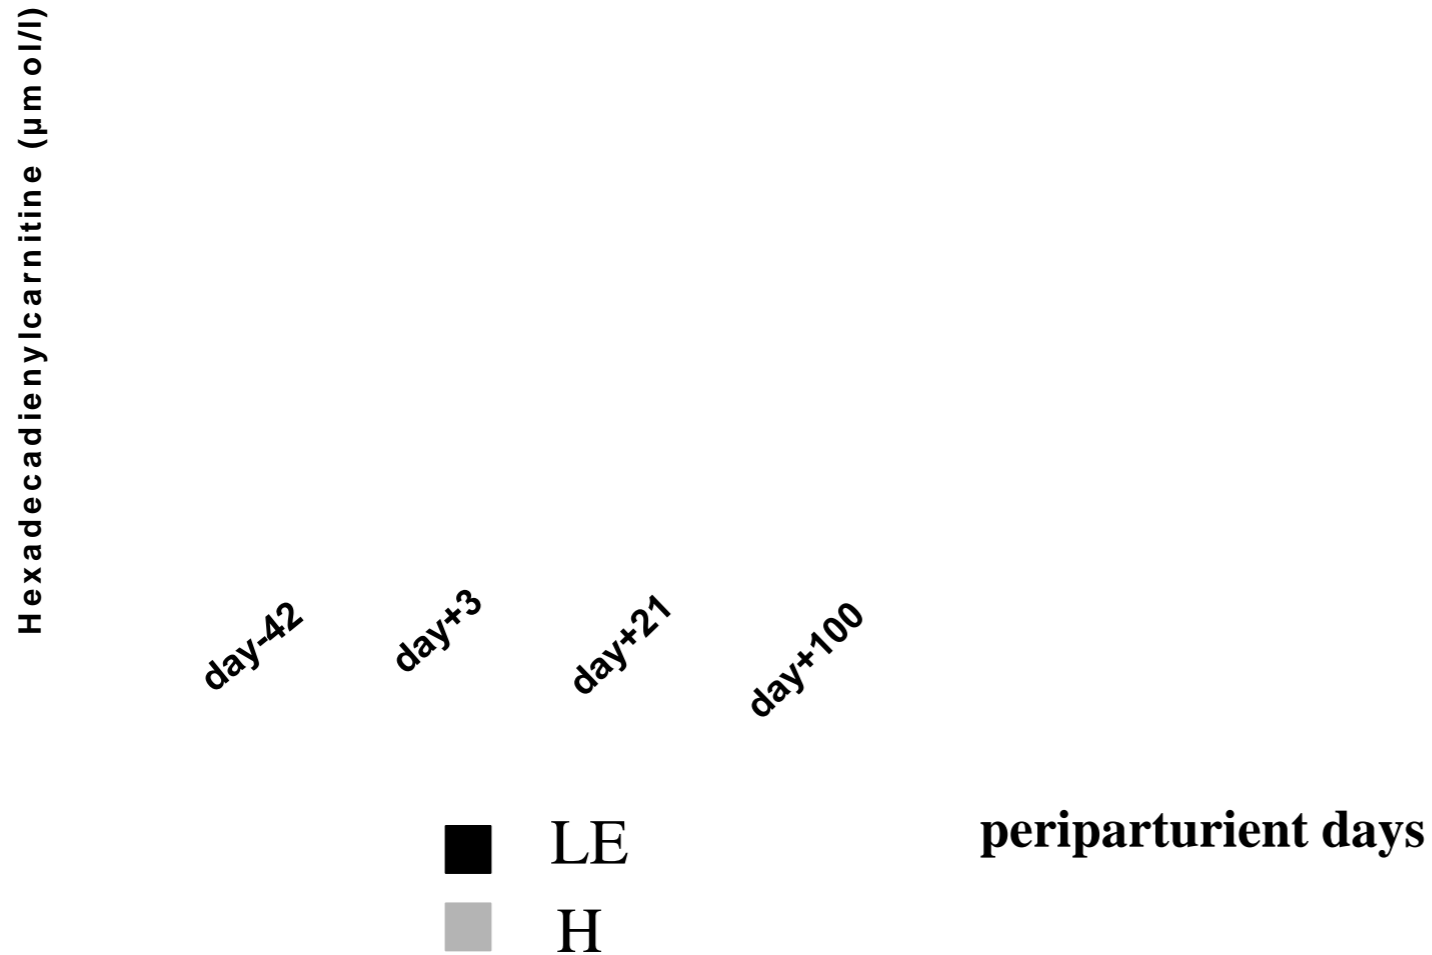

day+100

periparturient days

# Results and Discussion

## *C16:2 – acyl carnitine*

## *C18:2 – linoleyl carnitine*

# Results and Discussion

## *C16 – palmitoyl carnitine*

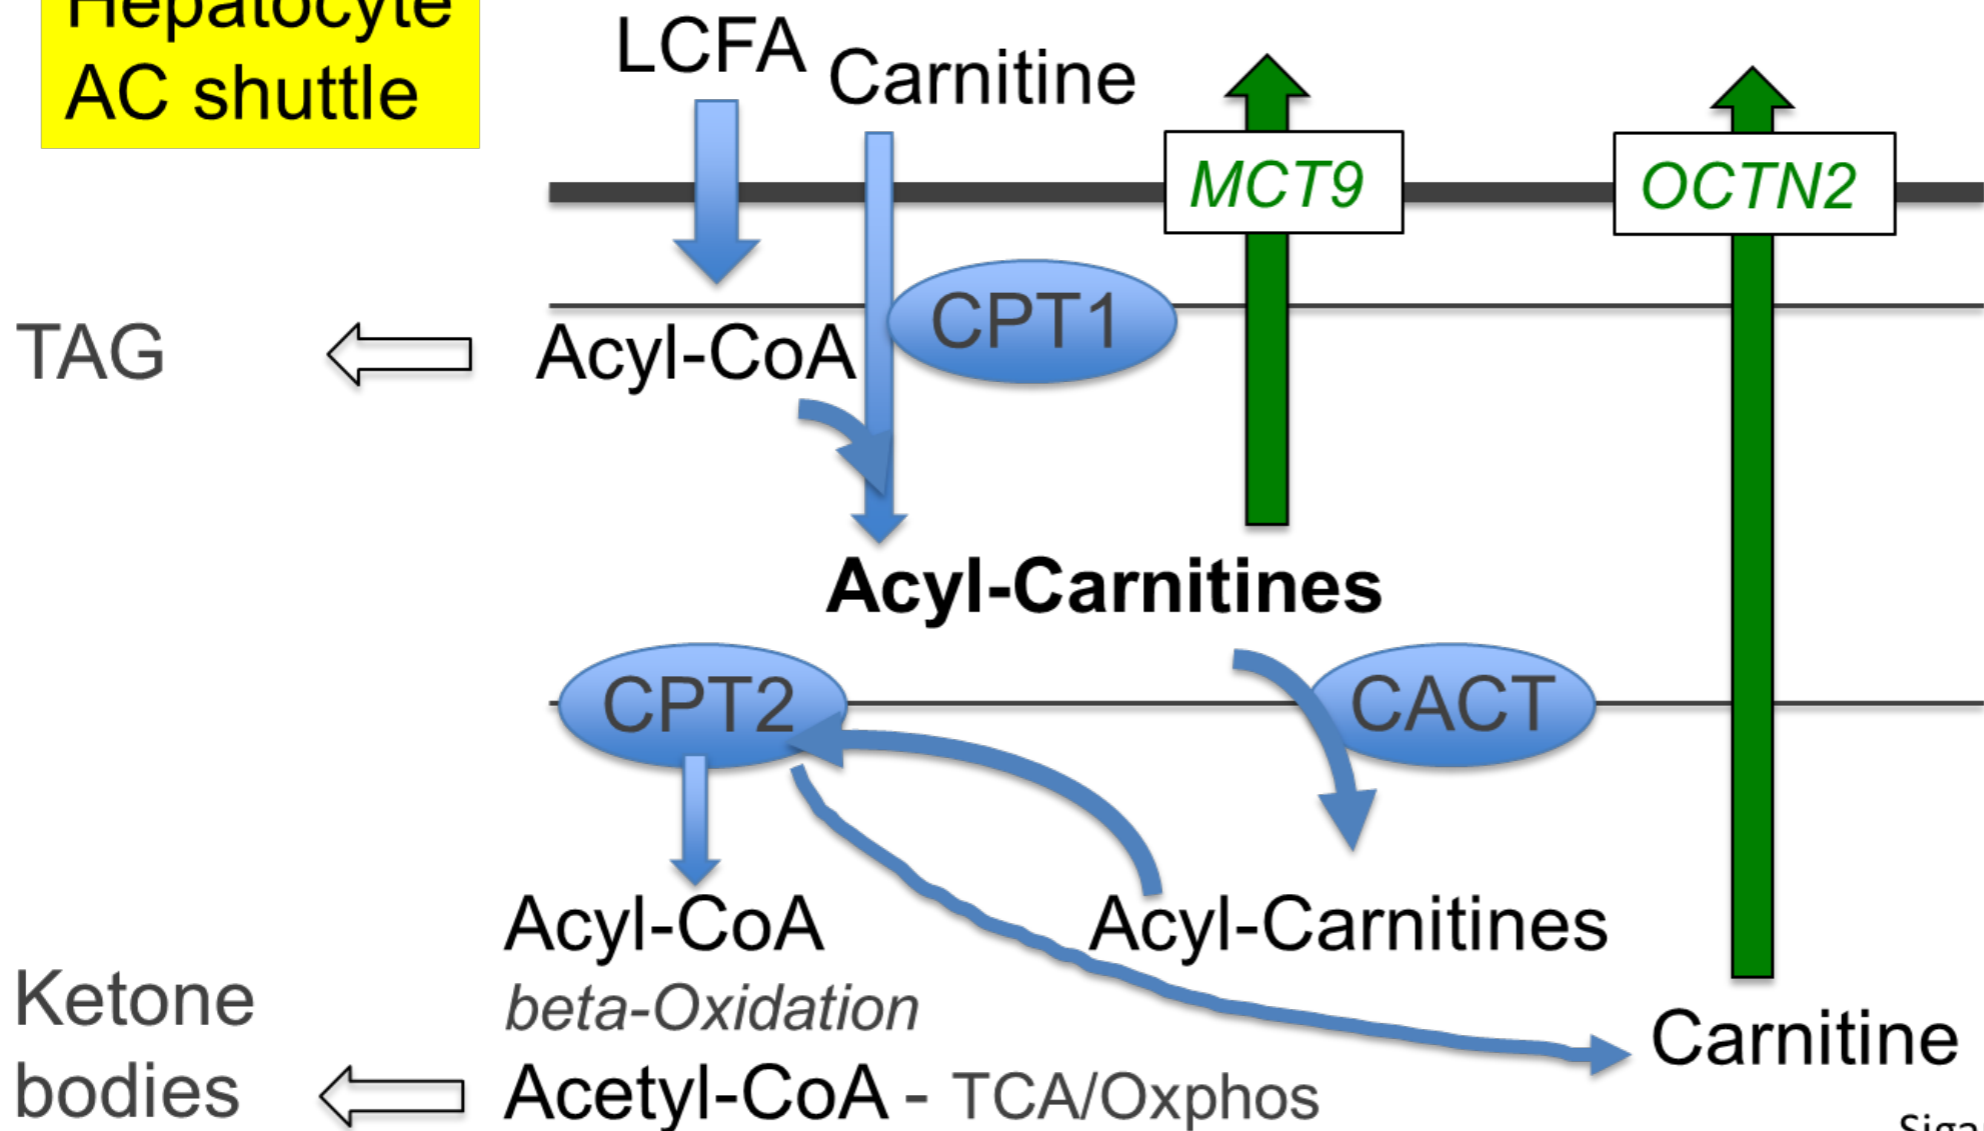

## *C18 – stearoyl carnitine*

# Results and Discussion

Hepatocyte  
AC shuttle

*Healthy dairy cows*

- can release excess of fatty acids as AC (mitochondrial protection)?
- do have more AC signals in plasma?
- preserve unsaturated fatty acids?

# Results and Discussion

## Kynurenine

Kynurenine (μmol/l)

day-42

day+3

day+21

day+100

periparturient days

■ LE  
■ H

# Results and Discussion

## *Tryptophan*

Tryptophan ( $\mu\text{mol/l}$ )

day -42    day +3    day +21    day +100

■ LE  
■ H

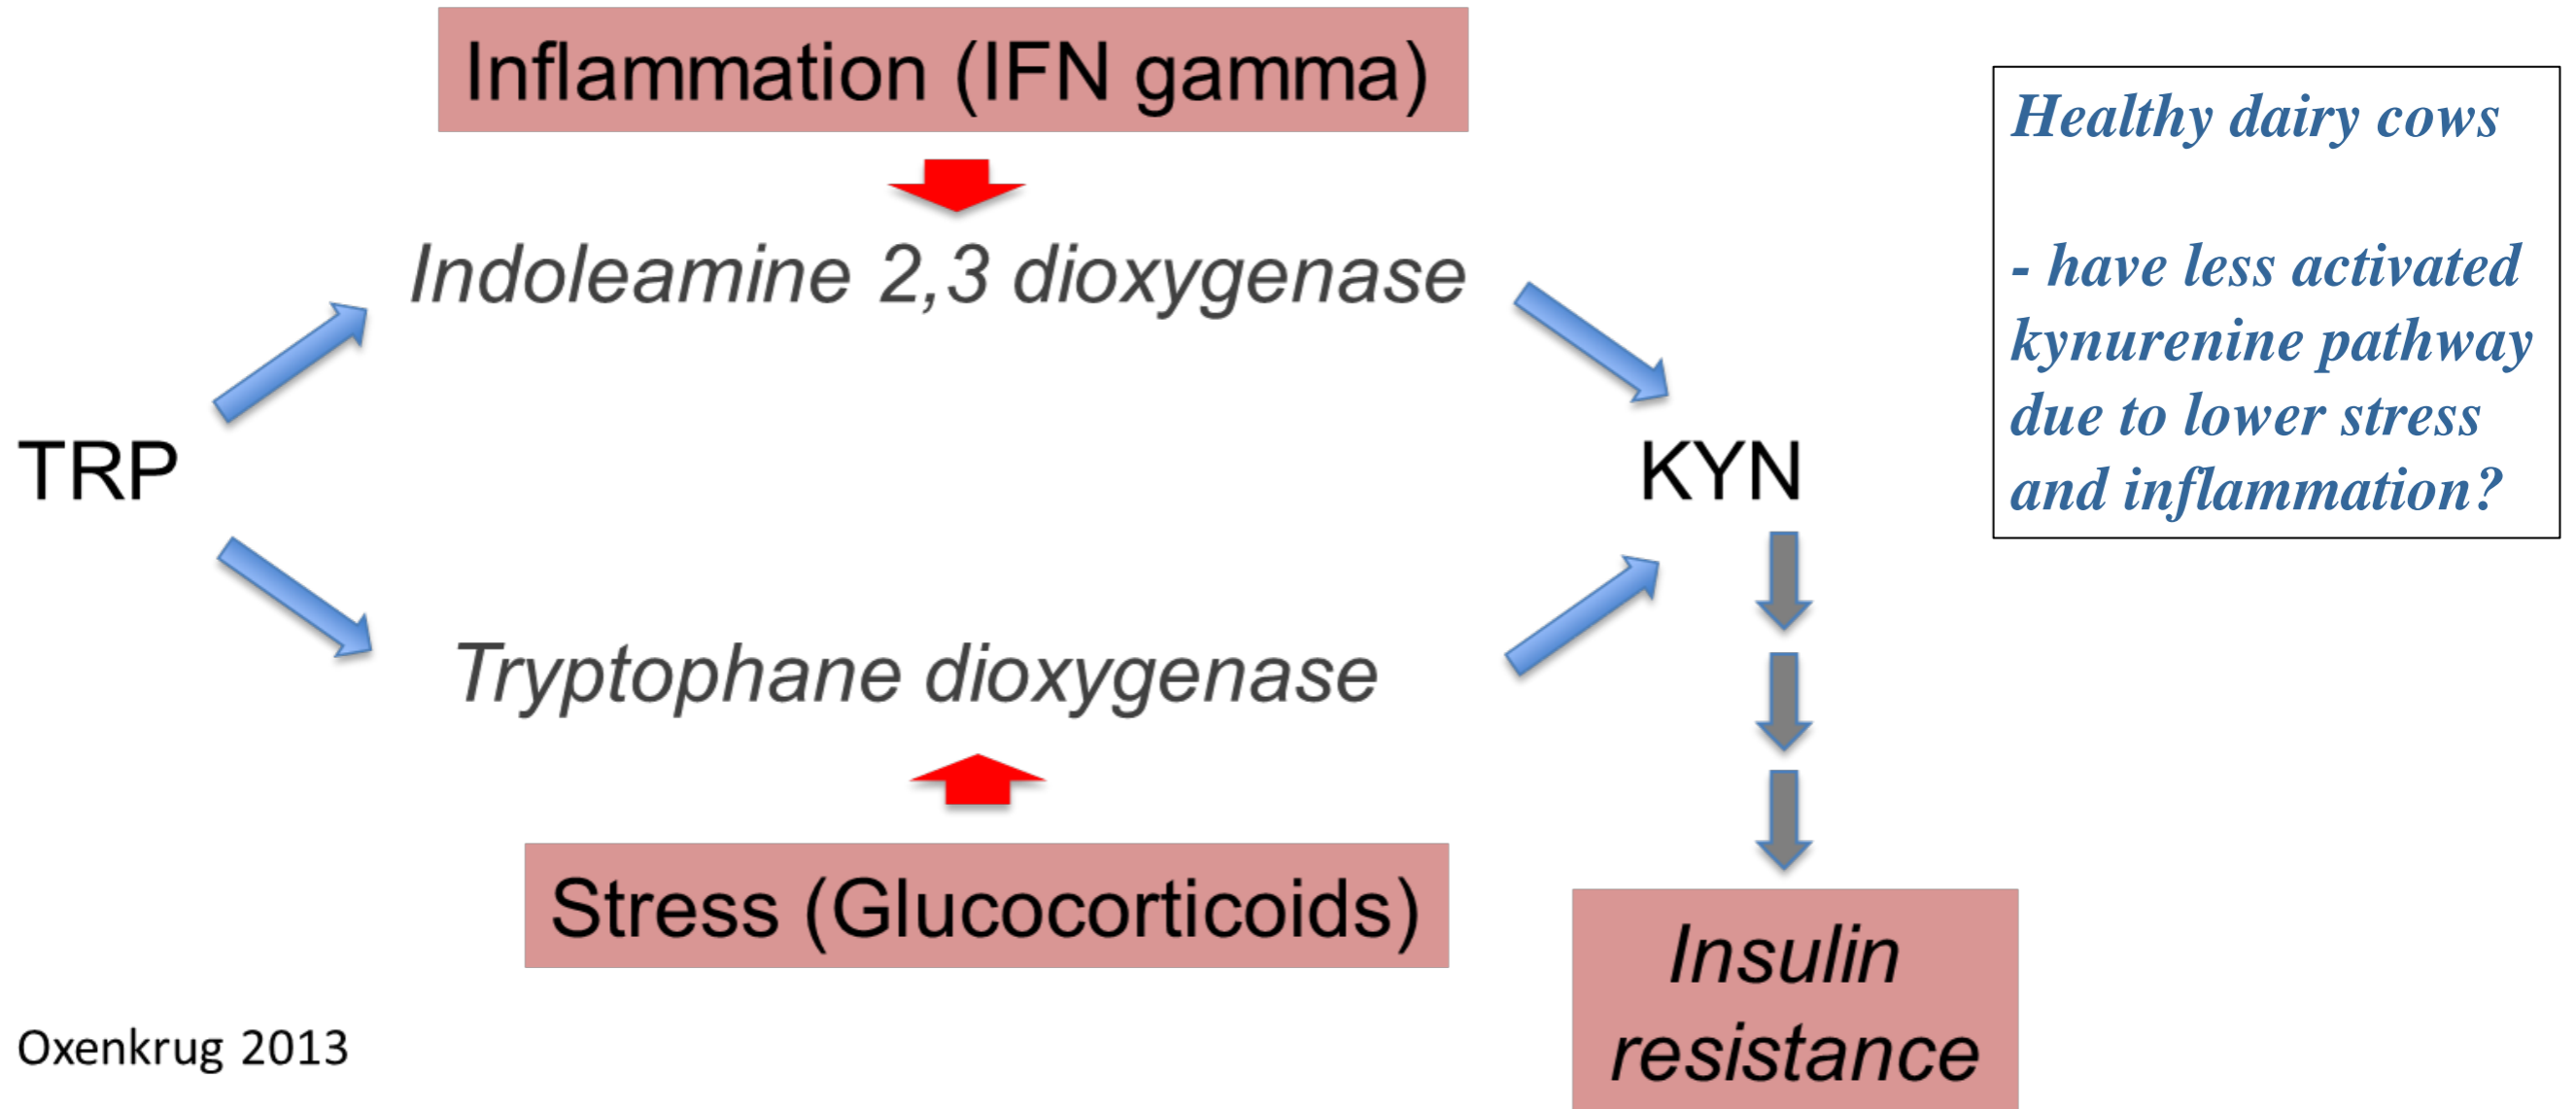

periparturient days

## *Kyn/Trp ratio*

Kyn/Trp

day -42    day +3    day +21    day +100

# Results and Discussion

# Results and Discussion

## Spermidine

Spermidine ( $\mu\text{mol/l}$ )

day-42

day+3

day+21

day+100

periparturient days

# Results and Discussion

## *Carnosine*

Carnosine ( $\mu\text{mol/l}$ )

day-42    day+3    day+21    day+100

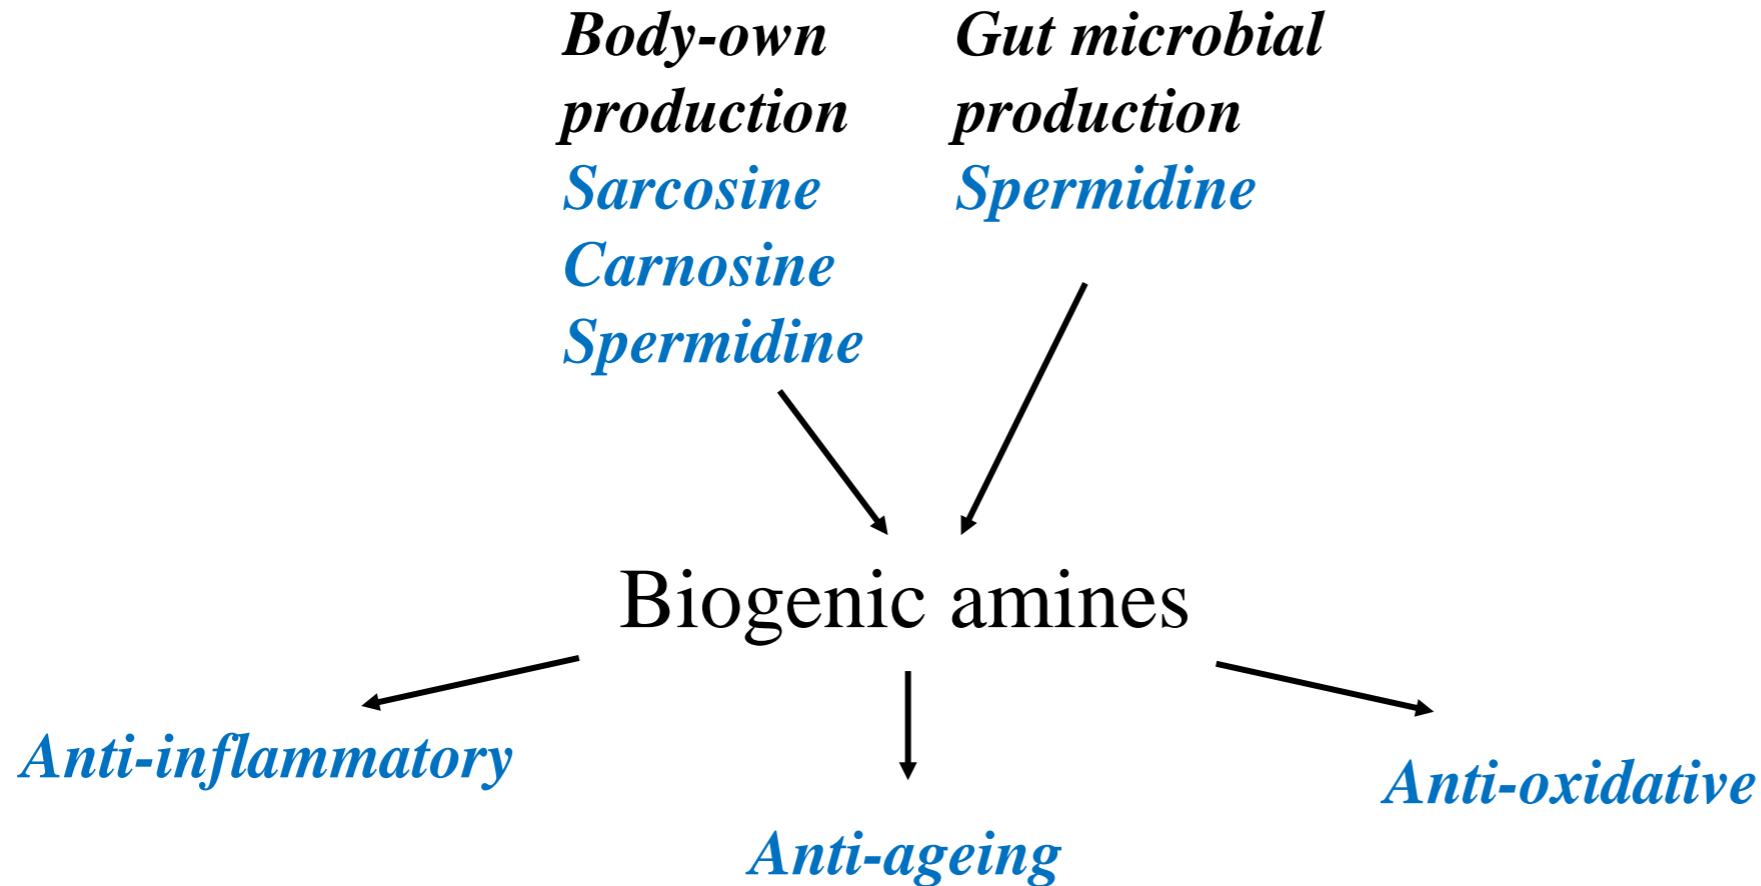

■ LE  
■ H

periparturient days

## *Sarcosine*

Sarcosine ( $\mu\text{mol/l}$ )

day-42    day+3    day+21    day+100

*Healthy dairy cows*  
  
*-have better support by biogenic amines?*

## *Phenylethylamine*

***Healthy dairy cows  
- are happier?***

Phenylethylamine ( $\mu\text{mol/l}$ )

day-42

day+3

day+21

day+100

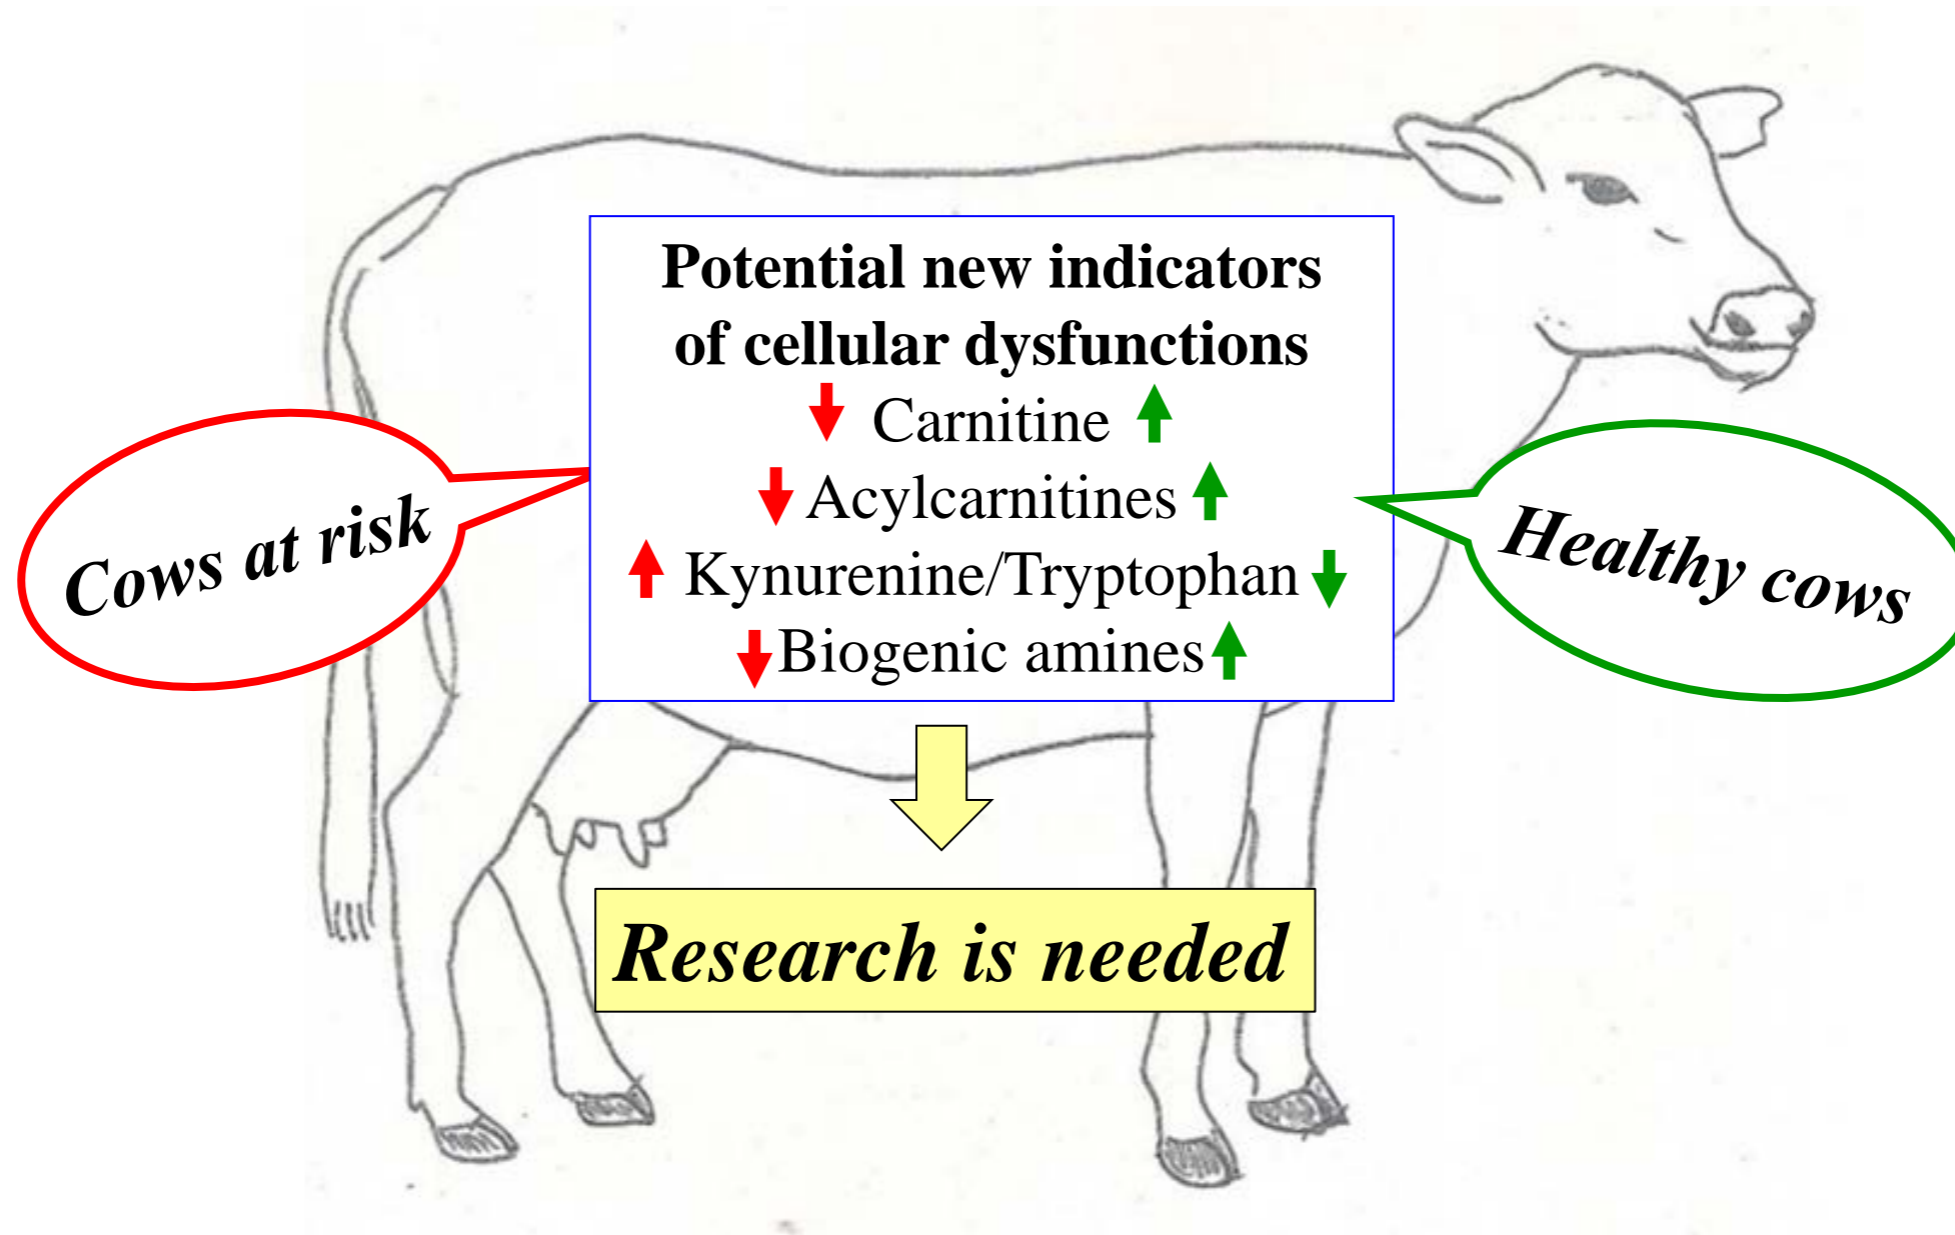

- LE (6 of 8 below detection limit)
- H (1 of 11 below detection limit)

## *Beta-Phenylethylamine*

- *Bioactive trace amine; endogenous amphetamine (from Phe endogenously, but also of bacterial origin)*
- *TAAR (trace aa receptors)*
- *Neurotransmitter in the brain*
- *Increases availability of dopamine, serotonin and NA*
- *Controls appetite and satiety*
- *Euphoriant, positively affects mood*

# Summary and Conclusion

**Thank you for your attention!**
