Viability of Australian AMS

- AMS opportunity: lifestyle, conditions of work, decrease labour and/or shift in time
 - Low cost critical, high international milk price volatility.
 - Low cost = high pasture and robot utilisation
 - *Can AMS follow well established pasture management principles?*
 - *Can we achieve AMS grazing systems to fully utilise milking robots across the 24 hours of a day?*
1. Conventional vs automatic milking pasture utilisation
 2. 24h robot utilisation

1. Pasture Utilisation

– *Can AMS follow well established pasture management principles?*

Original Article

A comparison of conventional and automatic milking system pasture utilization and pre- and post-grazing pasture mass

C. E. F. Clark , S. R. Farina, S. C. Garcia, M. R. Islam, K. L. Kerrisk, W. J. Fulkerson

First published: 29 April 2015 [Full publication history](#)

Pages 153–159

- CMS: moderate stocking rate (MSR) (9.5ha, 30 cows, 2.5 cows/ha) and high stocking rate (HSR) (6.5ha, 30 cows, 3.8 cows/ha)
- AMS: 3.1 cows/ha, 41 ha, 128, mixed breed (Friesian, Illawarra and crossbred)

Results

- matching daily pasture consumption with pasture growth rate
- maintain a whole farm system pasture mass of around 2,000kgDM/ha (± 200 kgDM)
- pre- and post-grazing mass of 2,600 and 1,500kgDM/ha (± 200 kgDM), respectively

(Holmes and Roche, 2007; Garcia and Holmes, 2005).

Results

Results

	System			s.e.d.	P-value
	MSR	HSR	AMS		
Pre-grazing pasture mass (kg DM/ha)	2,330 ^{ab}	2,226 ^b	2,478 ^a	80	0.02
Post-grazing pasture mass (kg DM/ha)	1,496 ^a	1,403 ^b	1,355 ^b	42	0.01
Pasture utilised (kg DM/ha/yr)	12,987	13,015	14,518	1,522	0.54

Conclusion

- *Can AMS follow well established pasture management principles?*

2. Improving milking robot utilisation

- Can we achieve AMS grazing systems to fully utilise milking robots across the 24 hours of a day?

Review: Milking robot utilization, a successful precision livestock farming evolution

Results

Results

Allocation	Gate Times	Feed Offered (pasture + silage)	% of Total Feed Offered	Active Access Time	% Daily Feed / Hour
A	0930-1730	6.7 ± 1.3	47%	8	5.9%
B	1730-0230	2.1 ± 0.6	15%	9	1.7%
C	0230-0930	5.3 ± 1.3	38%	7	5.4%

Results

Allocation	Gate Times	Feed Offered (pasture + silage)	% of Total Feed Offered	Active Access Time	% Daily Feed / Hour
A	0930-1730	6.7 ± 1.3	47%	8	5.9%
B	1730-0230	2.1 ± 0.6	15%	9	1.7%
C	0230-0930	5.3 ± 1.3	38%	7	5.4%

Results

Conclusions

Can we achieve AMS grazing systems to fully utilise milking robots across the 24 hours of a day?

- Predominantly driven by diurnal variability in feed intake
- 30% increase in milking robot utilisation through a simple change in how we offer feed on farms
