OBJECTIVES

Identifying interacting genes, biological pathways and potential regulators of feed efficiency (FE) in pigs using a systems genetic approach.

Phenotypic and Genotypic data

349 Duroc pigs
LIPGEN project

↓ QC

30,530 SNPs

FEED EFFICIENCY

- **Residual Feed Intake (RFI)**
- Food Conversion Ratio (FCR)
- Daily feed intake (DFI)

GROWTH & FAT DEPOSITION

- Daily growth (ADG)
- Back fat (BF)
- Intramuscular fat (IMF)

MEAT QUALITY

- Saturated fatty acid (SFA)
- Monounsaturated FA (MUFA)
- Polyunsaturated FA (PUFA)

Association weight matrix (AWM)

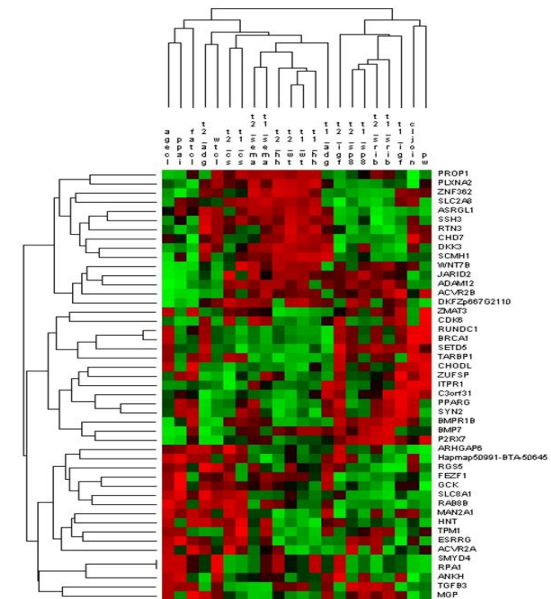

Fortes et al. 2010

1. Exploit the power of Multivariate analysis
2. Combine the results from GWAS
3. With the knowledge of Transcription Regulators
4. In a Network Theory framework

for (trait in dataset) { **GWAS** (p-value & \hat{a})

AWM

PCIT Reverter and Chan, 2008

AWM for feed efficiency

- Select SNPs that may affect RFI ($P \leq 5\%$)
- On average, how many of the remaining traits are affected by these RFI-associated SNPs?
- Select SNPs with $P \leq 5\%$ in ≥ 3 traits

- ❖ 704 Genes as rows (via neighbouring SNP)
- ❖ 10 Traits as columns
- ❖ Each cell $\{i, j\}$ value is the normalized (z-scores) additive effect of i^{th} -SNP on the j^{th} -trait
- ❖ **49 regulators** (transcription factors)

Biological network parameters

CentiScaPe: Network topology and node centralities

ClueGO and **IPA:** Gene ontology and pathways analysis

iRegulon: binding sites for predicted targets of key TF

Discovering of key regulators (TF)

LHX4, POU2AF1

LHX4, POU2AF1, TCF7L2

LHX4, POU2AF1, TCF7L2, ARID1B

Literature evidence

TCFL2

Identification of genetic markers associated with residual feed intake and meat quality traits in the pig

B. Fan^{a,b,c}, S. Lkhagvadorj^{a,b}, W. Cai^{a,b}, J. Young^{a,b}, R.M. Smith^a, J.C.M. Dekkers^{a,b}, E. Huff-Lonergan^a, S.M. Lonergan^a, M.F. Rothschild^{a,b,*}

Genome-wide association and pathway analysis of feed efficiency in pigs reveal candidate genes and pathways for residual feed intake

Duy N. Do¹, Anders B. Strathe^{1,2}, Tage Ostensen², Sameer D. Pant¹ and Haja N. Kadamdeen^{1*}

LHX4

Three Novel Missense Mutations within the *LHX4* Gene Are Associated with Variable Pituitary Hormone Deficiencies

Roland W. Pfaeffle, Chad S. Hunter, Jesse J. Savage, Mario Duran-Prado, Rachel D. Mullen, Zachary P. Neeb, Urs Eiholzer, Volker Hesse, Nadine G. Haddad, Heike M. Stobbe, Werner F. Blum, Johannes F. W. Weigel, and Simon J. Rhodes

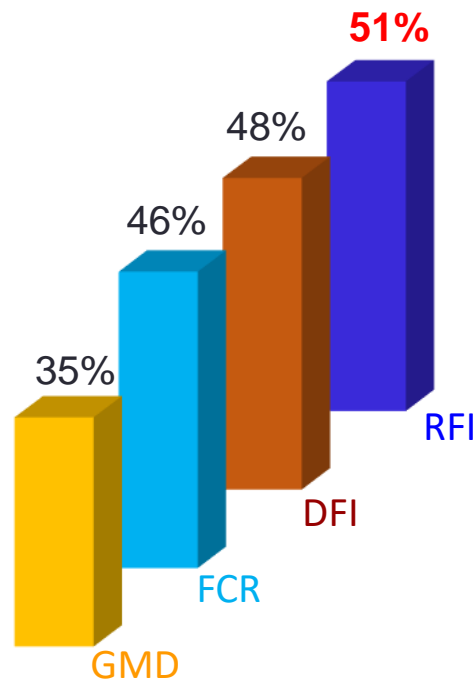

POU2AF1

Cloning, Functional Characterization, and Mechanism of Action of the B-Cell-Specific Transcriptional Coactivator OCA-B

YAN LUO AND ROBERT G. ROEDER*

Proportion of phenotypic variance (399 SNPs)

GCTA-GREML method (Yang et al. 2010)

Explained by the network regulated by
LHX4, POU2AF1, TCF7L2

RFI phenotype variance explained by 399
 randomly selected SNPs (3,000 replicates)

Accuracy of RFI prediction (399 SNPs)

Crossvalidation (BGLR; de los Campos and Perez, 2013)

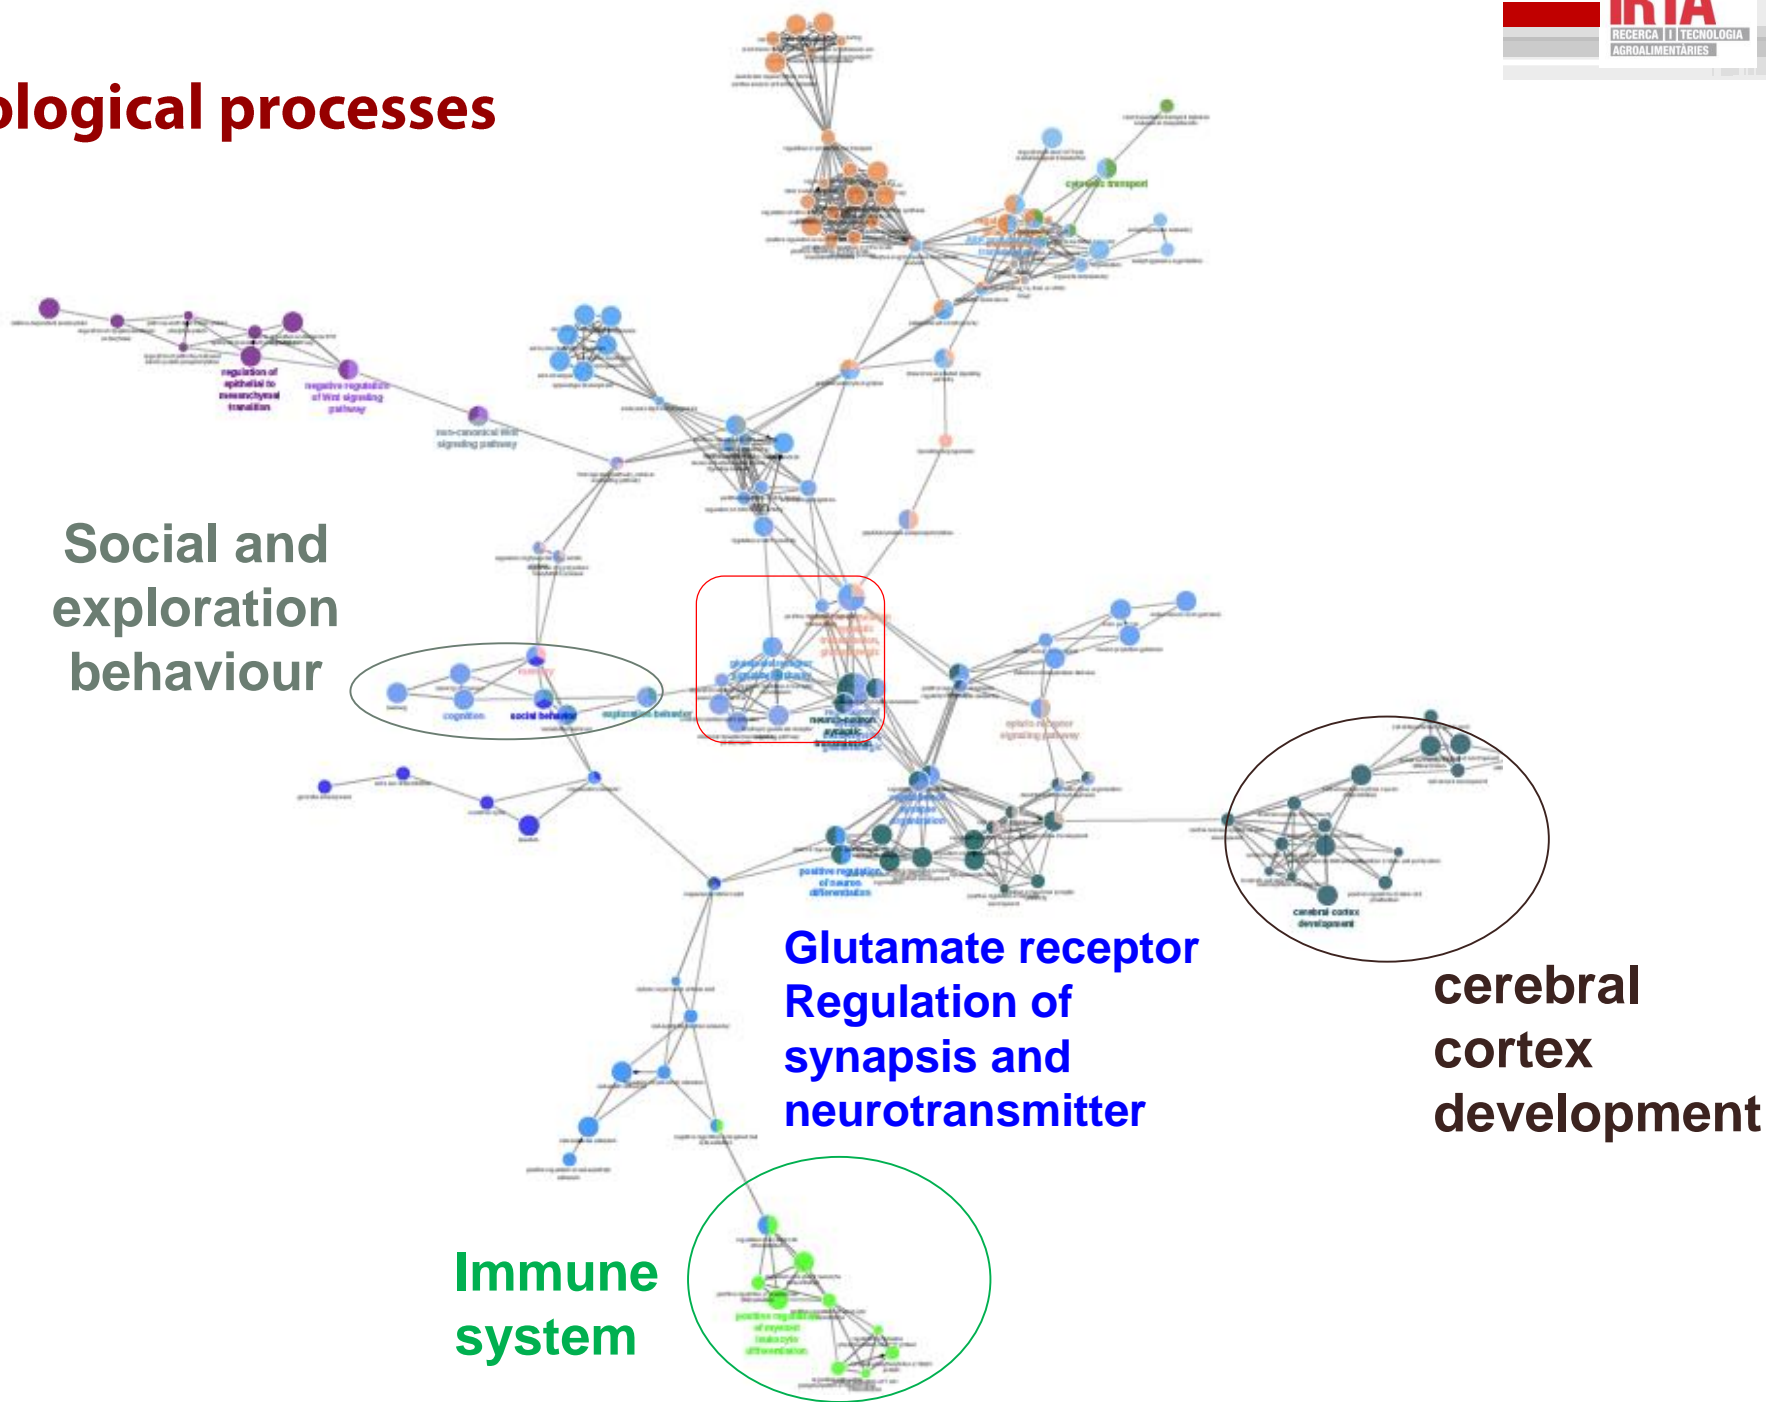

Accuracy of RFI prediction (399 SNPs)

Biological processes

Immune response

RESEARCH ARTICLE

Open Access

A transcriptome multi-tissue analysis identifies biological pathways and genes associated with variations in feed efficiency of growing pigs

Florence Gondret^{1*}, Annie Vincent¹, Magalie Houée-Bigot², Anne Siegel³, Sandrine Lagarrigue¹, David Causeur², Hélène Gilbert⁴ and Isabelle Louveau¹

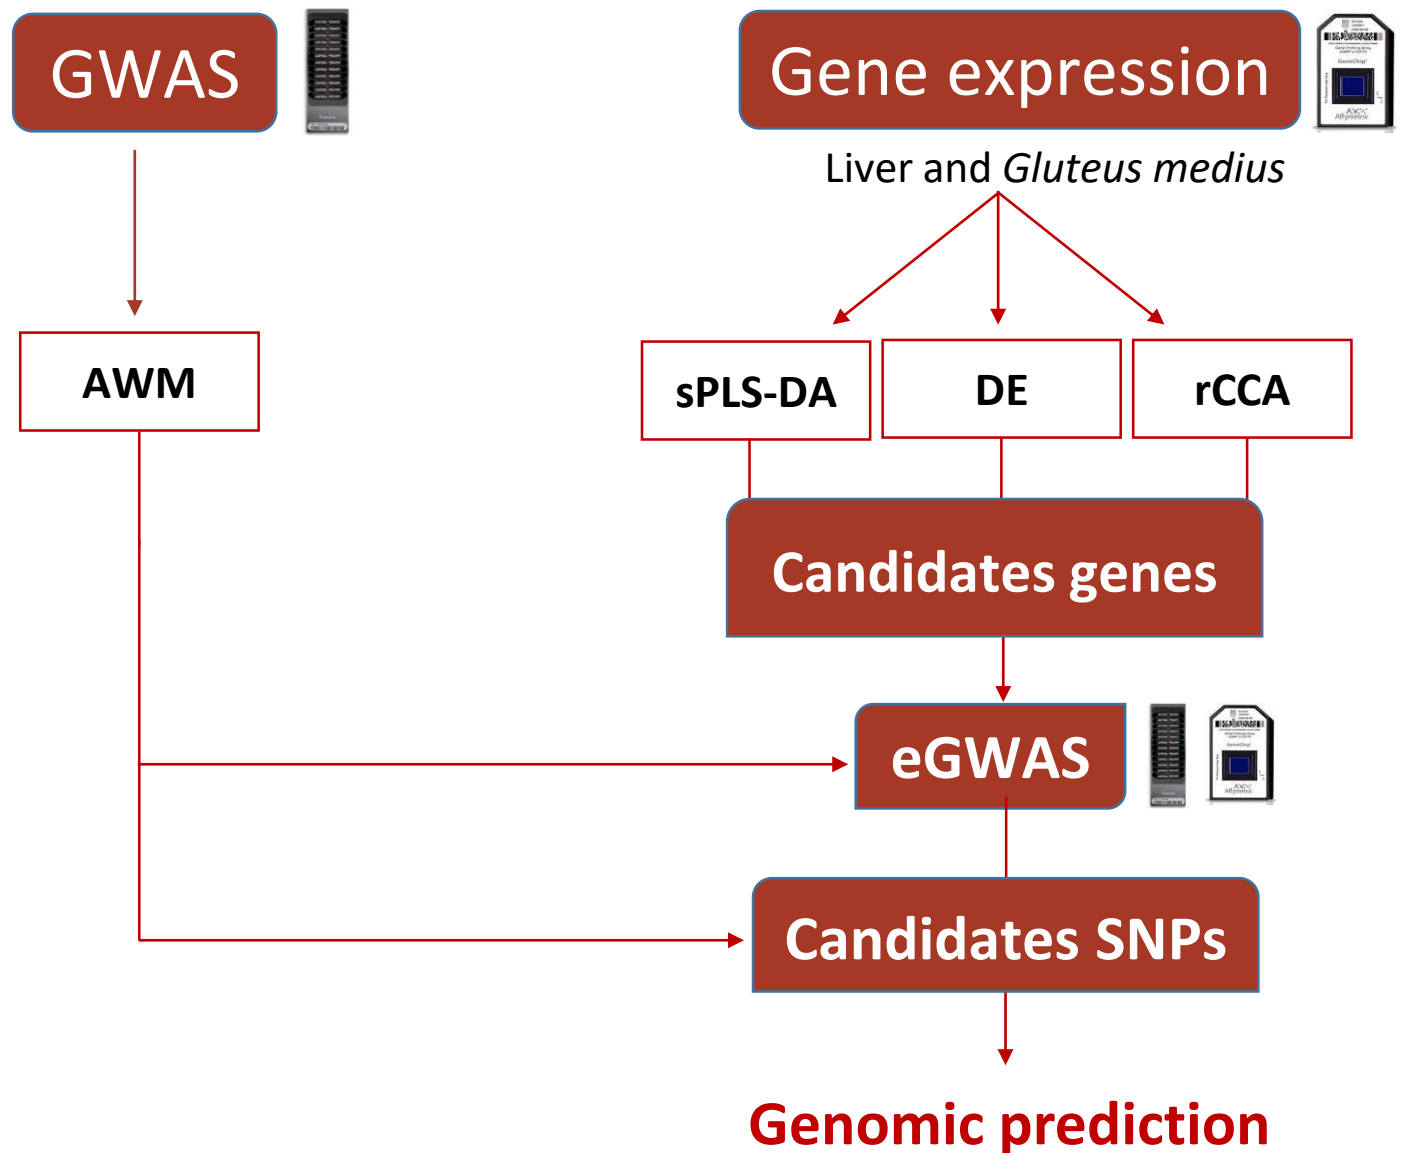

Integrative approach using liver and duodenum RNA-Seq data identifies candidate genes and pathways associated with feed efficiency in pigs

Yuliaxis Ramayo-Caldas¹, Maria Ballester¹, Juan Pablo Sánchez¹, Olga González-Rodríguez², Manuel Revilla^{2,3}, Henry Reyer⁴, Klaus Wimmers^{4,5}, David Torralardona⁶ & Raquel Quintanilla⁴

CONCLUSIONS

- ❖ *LHX4*, *POU2AF1* and *TCF7L2* may mediate a highly interconnected regulatory cascade that seems pivotal for FE in pigs.
- ❖ **Immune response** appears consistently involved in FE related traits.
- ❖ **Social behaviour**, **neurotransmitter** and circadian entrainment were also overrepresented biological processes.

PERSPECTIVES

Genomic prediction
