# Genetic analysis of data from Swedish stallion performance test

Viklund, Å., Granberg, L., Eriksson, S.  
Swedish University of Agricultural Sciences

# Swedish Warmblood

71,000 horses

4,400 covered mares (2017)

“Internationally competitive horses in dressage, show jumping or eventing”

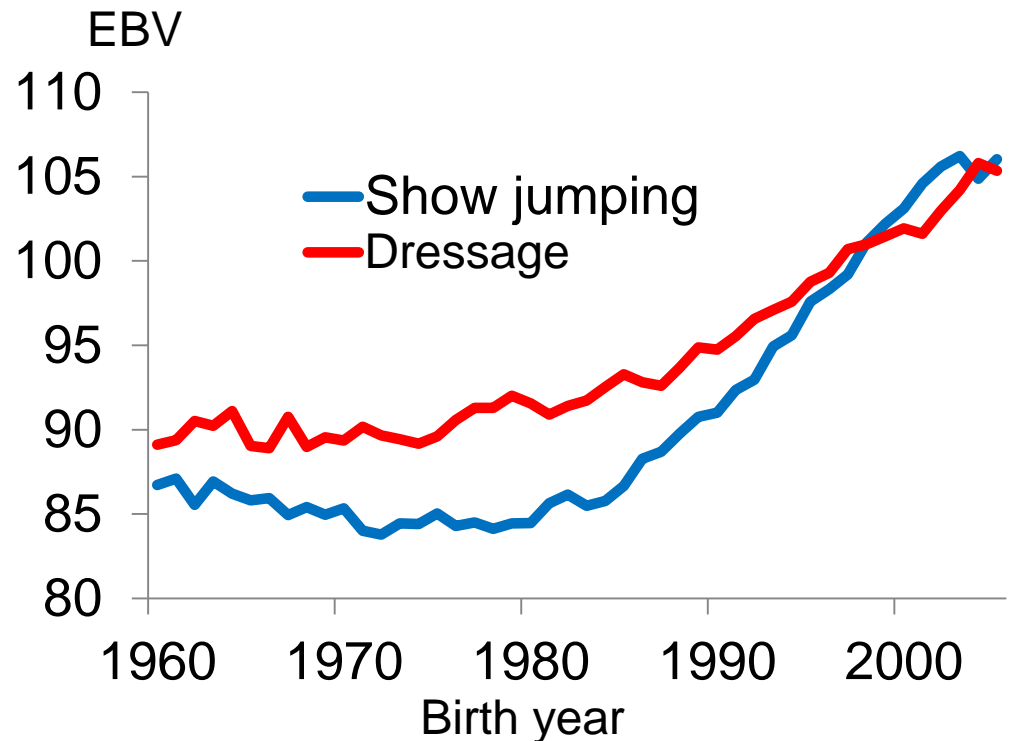

# Stallion Performance Test

Introduced in the early 80'ies

Station test

Most important step in breeding program

# Stallion Performance Test

Important changes in 2002:

Shorter test – one week

3-year-old stallions can be temporarily approved

Test divided into two phases  
with specialization in second  
phase

Total Hope 1307. Photo Laila Berglund

# Aim

Estimate genetic parameters for SPT traits 2002-2017

Estimate genetic correlations between SPT and competition traits

Ike 1348. Photo Roland Thunholm

# SPT data 2002-2017

569 stallions (660 test results), 174 approved

Stallions originated from 20 studbooks

Studbook	Proportion
SWB	46%
KWPN	11%
HANN	11%
OLDBG	11%
HOLST	7%
Other	14%

Traits

conformation

type, head-neck-body, correctness of legs

gaits

walk, trot and canter (under rider)

jumping

technique & capacity and general impression (free or under rider)

# Competition data

50,943 horses born 1980-2012

432 stallions with SPT data

6,771 offspring to stallions with SPT data

Traits

dressage and show jumping

lifetime accumulated points transformed with 10-log

# Statistical models

## SPT

$y = \text{year} + \text{age} + \text{stallion} + \text{perm. env.} + \text{residual}$

## Competition

$y = \text{birth year} + \text{sex} + \text{horse} + \text{residual}$

# Genetic parameters SPT

Trait		Heritability
<b>Conformation</b>	Type	0.57
	Head-neck-body	0.34
	Correctness of legs	0.04
<b>Gaits</b>	Walk	0.44
	Trot	0.62
	Canter	0.49
<b>Jumping</b>	Technique & capacity	0.55
	General impression	0.50

# Genetic correlations between SPT and competition

	Dressage	Show jumping
<b><i>Gaits</i></b>		
Walk	0.73	
Trot	0.75	
Canter	0.79	
<b><i>Jumping</i></b>		
Technique & capacity		0.74
General impression		0.68

# Relationship between stallions

	Average relationship (%)
Jumping stallions	3.3
Dressage stallions	2.5
Jumping & dressage stallions	0.7

# Average relationship within and between groups of dressage and show jumping horses

# Conclusions

SPT is a good selection tool

high heritabilities

strong correlations to breeding goal

Specialization has increased

stallions in SPT is strongly preselected for one discipline

SPT data should be analyzed together with less selected data
