

# Sustainable Pig Production Systems

→ Development of an on-farm assessment and feedback tool

## Background

- Sustainability is a key priority for pig farms of the future
- Apparently conflicting areas of sustainability e.g. outdoor run: (+) pigs vs. (-) environment
- Very little on-farm data available
- No practical assessment and feedback tool

## Goals of the project

- Collect and disseminate evidence-based information
  - as basis for improving sustainability
  - in typical as well as niche pig production systems across 7 European countries
- Development of an app for collecting and feeding back farm-individual data

## Expected outcomes

- Integrative on-farm sustainability assessment tool for pig farmers and advisors  
 → link with an existing international pig production database
- Enhanced benchmarking given as feedback to farmers
  - Animal
  - Environment
  - Farmer
  - Economy
 → see example in next box
