

#### **75th EAAP Annual Meeting**

Improving animal welfare by optimisng nutrition/ feeding behaviour, Part 1

# Can stocking density and feeding space influence weaned piglet performance and behaviour?

A. Huting<sup>1</sup>, J. van Renswoude<sup>1</sup>, and F. Molist<sup>1</sup>

1. Schothorst Feed Research (SFR), Meerkoetenweg 26, 8218 NA Lelystad, The Netherland

#### **Introduction**

**50** 

## ➤ Minimum requirements (m²/ pig)

Body weight, kg	1	0	2	0	3	0	
Besluit houders van dieren <sup>1</sup>	0.20		0.30			0.50	
Directive 2008/120/EC	0.15	0.20		0.30		0.40	
Directive 2010/63/EU (for scientific purposes)	0.25	0.35		0.50		0.70	

Reference	Feeding	places/ piglet	Drinking places/ piglet		
Reference	3-4 days PW	4 days PW – 25 kg	3-4 days PW	4 days PW – 25 kg	
VIC sterksel <sup>2</sup>	0.50	0.20	0.20	0.10	

<sup>1</sup>In case groups are larger than 40 pigs; m2 per pig/ can be reduced by 10% <sup>2</sup>https://www.wur.nl/upload\_mm/f/b/a/29b9f82c-240c-4615-ab59-1e7416ea6418\_aantal%20vreet%20en%20drinkplaatsen,%20biggen%20en%20vleesvarkens%20bij%20droogvoerverstrekking.pdf

# **Housing conditions SFR**

Department	Small pen - new	Small pen - old	Large pen		
Pen size	2.00 x 1.13 m	2.00 x 1.13 m	1.60 x 2.59 m	-	
# piglets/ pen	6-7	6-7	14		
Surface/ piglet	0.37-0.32 m <sup>2</sup>	0.37-0.32 m <sup>2</sup>	0.32 m <sup>2</sup>		Besluit houders van dieren & Directive 2008/120/EC
Floor type	Partly slatted	Fully slatted	Partly slatted		Directive 2000, 120, 22
# drink nipples	1	1	1		
Drinking places/ piglet	0.17-0.14	0.17-0.14	0.07	X	VIC sterksel
# feeding places	3	6	3		
Feeding places/ piglet	0.50-0.42	1.00-0.85	0.21		VIC sterksel

## **Objective**

- ➤ Can stocking density and feeding space influence weaned piglet performance and behaviour?
  - **Trial 1)** Low stocking density (0.57 m<sup>2</sup>/ pig) vs. moderate stocking density (0.38 m<sup>2</sup>/ pig)
  - Trial 2) 0.50 feeding space/ piglet vs. 1.00 feeding space/ piglet

# **Experimental design**

	Trial 1		Trial 2		
Department	Small pen - new	Small pen - new	Small pen - new	Small pen - old	
Pen size	2.00 x 1.13 m	2.00 x 1.13 m	2.00 x 1.13 m	2.00 x 1.13 m	
# piglets/ pen	4	6	4	4	
Surface/ piglet	0.57 m <sup>2</sup>	$0.37 \text{ m}^2$	0.57 m <sup>2</sup>	$0.57 \text{ m}^2$	
Floor type	Partly slatted	Partly slatted	Partly slatted	Fully slatted	
# drink nipples	1	1	1	1	
Drinking places/ piglet	0.25	0.17	0.25	0.25	
# feeding places	3	3	3	6	
Feeding places/ piglet	0.75	0.50	0.75	1.50	

## **Experimental design**

#### **▶** Stocking density

- 24 replicates (pen)/ treatment
- Weaning weight 8.38 kg (SD = 0.530)
- Weaning age 29.8 days (SD = 0.55)
- Commercial diets

#### > Feeding places

- 12 replicates (pen)/ treatment
- Weaning weight 7.31 kg (SD = 0.377)
- Weaning age 31.4 days (SD = 1.66)
- Commercial diets

## **Experimental design**

#### **▶** Stocking density

Damage score @ day 35 post-weaning

#### **▶** Feeding places

Damage score @ day 14 and day 35 post-weaning

#### Tail damage (# of piglet affected)

Score 0 Intact tail No tail damage

Score 1 Damaged tail This include bite marks, open wounds (fresh blood or crust),

and/or red/ swollen tails

Score 2 Incomplete tail Shortened tail

#### Ear damage (# of piglet affected)

Score 0 Intact ear No ear damage

Score 1 Damaged ear Superficial scratches or visible lesions with fresh or dried blood

Score 2 Incomplete ear Severe damage part of the ear is missing

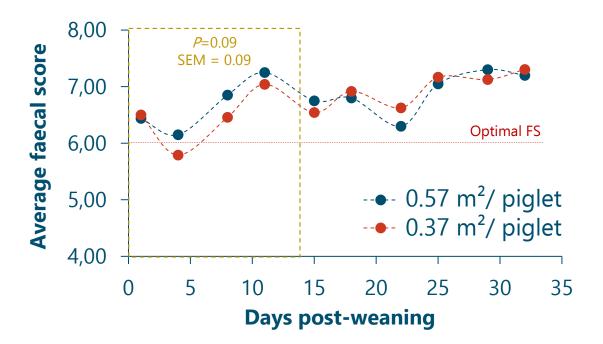

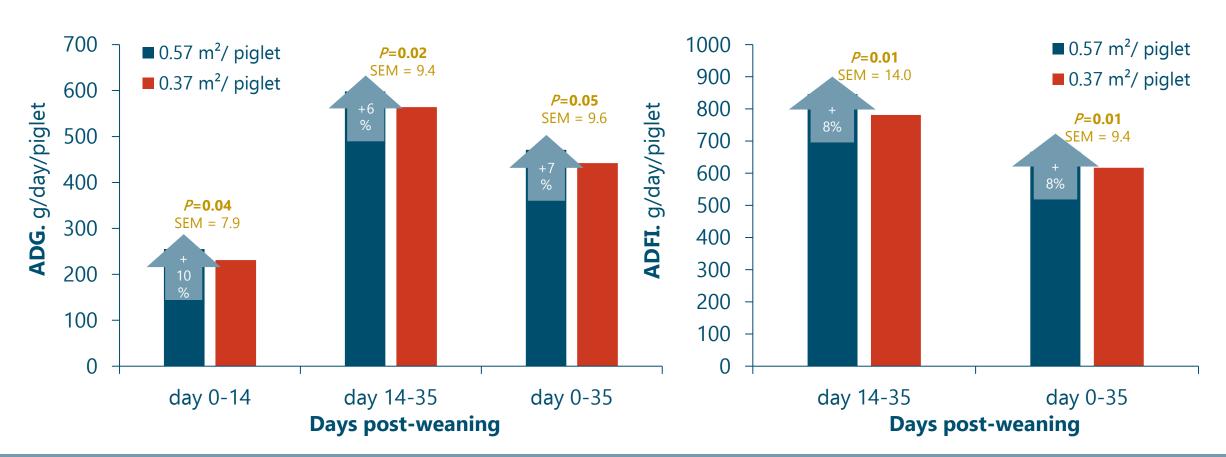

- ➤One piglet died during the trial (meningitis)
- $\geq$  4.51% piglets medically treated (P = 0.46)

Description	Intact tail	Damaged tail	Incomplete tail
0.57 m <sup>2</sup> / piglet	97.9	0.0	2.1
0.37 m <sup>2</sup> / piglet	95.8	3.5	0.7

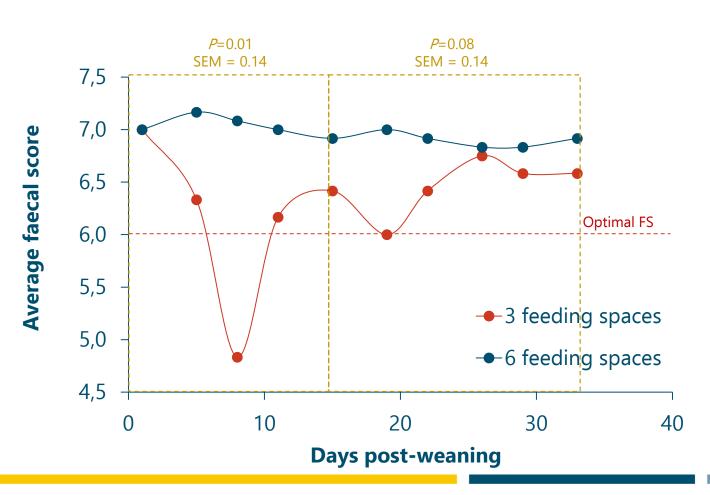

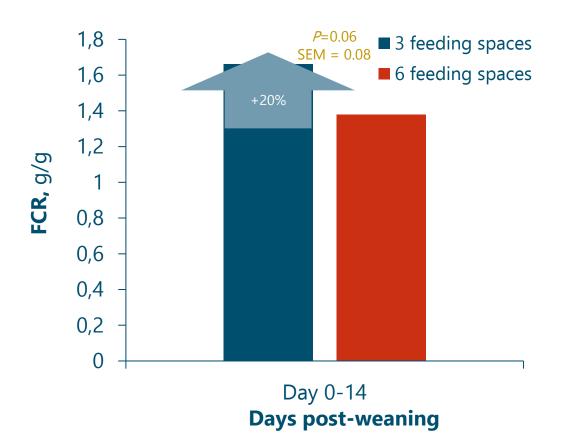

FCR was also significantly improved (-7%) between day 0-14 post-weaning (P=0.02) for 0.57 m<sup>2</sup>/ piglets

- ➤ No piglet died
- ▶4.17% piglets medically treated

Description	Intact tail	Damaged tail	Incomplete tail	e <i>P</i> -value
	Day 14 PW			
3 feeding places	95.8	4.2	0.0	NS
6 feeding places	100	0.0	0.0	1/1/2
		Day 28 F	PW .	
3 feeding places	93.8	6.3	0.0	0.03
6 feeding places	87.5	10.4	2.1	

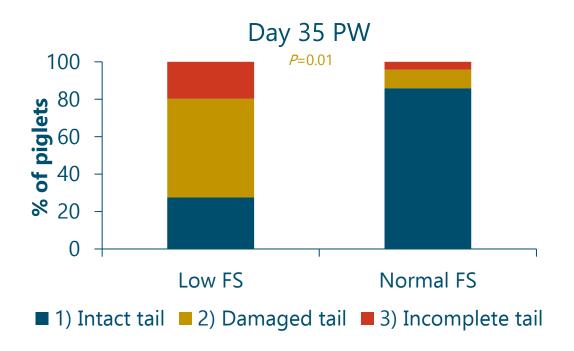

Maybe because different rooms (floor)?

Kallio et al., 2018

## Follow-up trial

Department	Low FS	Normal FS
Pen size	2.00 x 1.13 m	4.00 x 1.13 m
# piglets/ pen	6	14
Surface/ piglet	$0.37 \text{ m}^2$	0.32 m <sup>2</sup>
Floor type	Fully slatted	Fully slatted
# drink nipples	1	1
Drinking places/ piglet	0.17	0.07
# feeding places	6	6
Feeding places/ piglet	1.00	0.43

#### **Conclusion**

- ► An addition of 0.2 m²/ piglet results in an improved performance
- Feeding space can influence faecal consistency and biting behaviour
  - Maybe dependent also on other factors (floor type)?

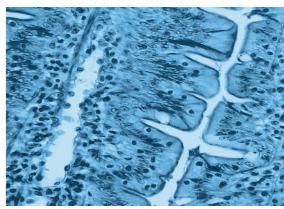

Competition for food
Stress & aggression Hunger
Feeder space **Satiety** Availability food
Specific hunger Tail in mouth behaviour
Foraging motivation
Fasting Dietary fibre
Foraging activity

Foraging activity
Sickness associated irritability
Antibiotics Particle size diet
Gastric ulcers **Health** Gut discomfort
Chewing to mitigate discomfort
Dietary imbalance
Intestinal barrier compromised
Dietary fibre

## Thank you for your attention
