

The strengths, weaknesses, and missing techniques or equipment of Research Infrastructures, assessed from a user's perspective

S. Rios, J. van Milgen, P. Domingo, C. De Cuyper, S. Millet, C. Reverté

75th EAAP annual meeting

Florence (Italy), September 1-5, 2024

Disclaimer: the PIGWEB project has received funding from European Union's Horizon 2020 research and innovation program under Grant Agreement No 101004770.

A top-down context ...

Research Infrastructures (RI) are **key elements** and play a key role in the European research setting. They contribute to the advancement of knowledge, **attract young people** to science, **structure** the scientific community, and are key in a movement towards “**Open**”, interconnected, and data-driven science.

Gaps and challenges:

- Concerted effort to continue **bringing together national facilities** at the pan-European level in the field of animal genetic resources, phenotyping and breeding, animal health is needed to contribute to address the challenge to produce safe, healthy and sustainable food.
- Large farm animals, poultry and fish, often in relation to **adaptation to climate change and higher feed efficiency**.
- World-class facilities for the **integration, conservation and coordination** of national and international **animal genetic stock** and potential stock lines for adaptation to climate change.

... with a bottom-up approach

EAAP survey: SWOT or “So what”?

EAAP survey: SWOT or “So what”?

1. In your opinion, what is the main **strength** of animal RI in the European landscape?
2. What is the main **weakness** of these RI?
3. What equipment would you like to use for your research, but you do not have it (or: you do not have access to it)?
4. In your opinion, what is the main **opportunity** for animal RI in the European landscape?
5. What is the main **threat** for these RI?
